

Exam Salesforce Mule-Arch-201 Tests & Detailed Mule-Arch-201 Study Dumps

Top 5 Facts to Rely on Salesforce Mule-Arch-201 Practice Tests

1. You get the actual Salesforce Mule-Arch-201 exam experience.
2. Time management becomes easy during the actual exam.
3. Valuable insights offer more improvement scope.
4. Rigorous Practice Makes you perfect about Salesforce Mule-Arch-201 syllabus domains.
5. Self-assessment provides self-satisfaction regarding the Mule-Arch-201 exam preparation.

What's more, part of that Prep4SureReview Mule-Arch-201 dumps now are free: https://drive.google.com/open?id=1r_nlUu4aBpnXYUCml43Y_w_YPC18K8v

If a person fails despite proper Salesforce Certified MuleSoft Platform Architect Mule-Arch-201 test preparation and using Mule-Arch-201 practice exam material, Prep4SureReview provides a money-back guarantee. If a person fails despite proper Salesforce Certified MuleSoft Platform Architect Mule-Arch-201 test preparation and using Mule-Arch-201 practice exam material, Prep4SureReview provides a money-back guarantee. Prep4SureReview offers three months of free updates if the Salesforce Certified MuleSoft Platform Architect exam content changes after the purchase of Salesforce Certified MuleSoft Platform Architect valid dumps. Prep4SureReview wants to save your time and money, so the authentic and accurate Salesforce Certified MuleSoft Platform Architect Mule-Arch-201 Exam Questions help candidates to pass their Mule-Arch-201 certification test on their very first attempt.

Our company constantly increases the capital investment on the research and innovation of our Mule-Arch-201 training materials and expands the influences of our Mule-Arch-201 study materials in the domestic and international market. Because the high quality and passing rate of our Mule-Arch-201 Practice Questions more than 98 percent that clients choose to buy our study materials when they prepare for the test Mule-Arch-201 certification. We have established a good reputation among the industry and the constantly-enlarged client base.

Detailed Mule-Arch-201 Study Dumps, Reliable Mule-Arch-201 Exam Answers

Many clients worry that after they bought our Mule-Arch-201 exam simulation they might find the exam questions are outdated and waste their time, money and energy. There are no needs to worry about that situation because our Mule-Arch-201 study materials boost high-quality and it is proved by the high passing rate and hit rate. And we keep updating our Mule-Arch-201 learning quiz all the time. We provide the best Mule-Arch-201 practice guide and hope our sincere service will satisfy all the clients.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which two statements are true about the technology architecture of an Anypoint Virtual Private Cloud (VPC)?

Choose 2 answers

- A. Round-robin load balancing is used to distribute client requests across different applications
- B. By default, HTTP requests can be made from the public internet to workers at port 6091
- C. Anypoint VPC is responsible for load balancing the applications
- D. CIDR blocks are used
- E. Ports 8081 and 8082 are used

Answer: B,D

Explanation:

An Anypoint Virtual Private Cloud (VPC) provides a secure and private networking environment for MuleSoft applications, using specific architectural elements:

CIDR Blocks:

Anypoint VPCs utilize CIDR blocks to define IP ranges, allowing organizations to control and segment the VPC's IP address space.

Port 6091 for HTTP Requests:

By default, HTTP requests can be made to workers on port 6091 from the public internet, providing an accessible entry point unless additional restrictions are applied.

of Correct Answers (B, E):

CIDR blocks enable IP range management for VPCs, and port 6091 is the default public entry port, which is part of Anypoint VPC's default settings.

of Incorrect Options:

Option A (Ports 8081 and 8082) is incorrect; these are not default public ports for Anypoint VPC.

Option C (responsible for load balancing) is incorrect as load balancing requires a separate Dedicated Load Balancer (DLB).

Option D (round-robin load balancing) applies to DLBs, not directly to VPCs.

Reference

For more on VPC setup and networking, refer to MuleSoft documentation on VPC configurations and default port settings.

NEW QUESTION # 60

A System API is designed to retrieve data from a backend system that has scalability challenges. What API policy can best safeguard the backend system?

- A. SLA-based rate limiting
- B. Auth 2 token enforcement
- C. IPwhitelist
- D. Client ID enforcement

Answer: A

Explanation:

Correct Answer: SLA-based rate limiting

>> Client Id enforcement policy is a "Compliance" related NFR and does not help in maintaining the "Quality of Service (QoS)". It

CANNOT and NOT meant for protecting the backend systems from scalability challenges.

>> IP Whitelisting and OAuth 2.0 token enforcement are "Security" related NFRs and again does not help in maintaining the "Quality of Service (QoS)". They CANNOT and are NOT meant for protecting the backend systems from scalability challenges. Rate Limiting, Rate Limiting-SLA, Throttling, Spike Control are the policies that are "Quality of Service (QoS)" related NFRs and are meant to help in protecting the backend systems from getting overloaded.

<https://dzone.com/articles/how-to-secure-apis>

NEW QUESTION # 61

Due to a limitation in the backend system, a system API can only handle up to 500 requests per second. What is the best type of API policy to apply to the system API to avoid overloading the backend system?

- A. Spike control
- B. HTTP caching
- C. Rate limiting
- D. Rate limiting - SLA based

Answer: A

Explanation:

Correct Answer: Spike control

>> First things first, HTTP Caching policy is for purposes different than avoiding the backend system from overloading. So this is OUT.

>> Rate Limiting and Throttling/ Spike Control policies are designed to limit API access, but have different intentions.

>> Rate limiting protects an API by applying a hard limit on its access.

>> Throttling/ Spike Control shapes API access by smoothing spikes in traffic.

That is why, Spike Control is the right option.

NEW QUESTION # 62

Mule applications that implement a number of REST APIs are deployed to their own subnet that is inaccessible from outside the organization.

External business-partners need to access these APIs, which are only allowed to be invoked from a separate subnet dedicated to partners - called Partner-subnet. This subnet is accessible from the public internet, which allows these external partners to reach it. Anypoint Platform and Mule runtimes are already deployed in Partner-subnet. These Mule runtimes can already access the APIs.

What is the most resource-efficient solution to comply with these requirements, while having the least impact on other applications that are currently using the APIs?

- A. Implement (or generate) an API proxy Mule application for each of the APIs, then deploy the API proxies to the Mule runtimes
- B. Duplicate the APIs as Mule applications, then deploy them to the Mule runtimes
- C. Add an additional endpoint to each API for partner-enablement consumption
- D. Redeploy the API implementations to the same servers running the Mule runtimes

Answer: A

NEW QUESTION # 63

What are the major benefits of MuleSoft proposed IT Operating Model?

- A. 1. Decrease the IT delivery gap
2. Meet various business demands by increasing the IT capacity and forming various IT departments
3. Make consumption of assets at the rate of production
- B. 1. Decrease the IT delivery gap
2. Meet various business demands without increasing the IT capacity
3. Make consumption of assets at the rate of production
- C. 1. Decrease the IT delivery gap
2. Meet various business demands without increasing the IT capacity
3. Focus on creation of reusable assets first. Upon finishing creation of all the possible assets then inform the LOBs in the

organization to start using them

Answer: B

Explanation:

Correct Answer:

1. Decrease the IT delivery gap
2. Meet various business demands without increasing the IT capacity
3. Make consumption of assets at the rate of production.

NEW QUESTION # 64
