Dumps ACA-100 Download - ACA-100 Certification Materials

The design of our ACA-100 guide training is ingenious and delicate. Every detail is perfect. For example, if you choose to study our learning materials on our windows software, you will find the interface our learning materials are concise and beautiful, so it can allow you to study ACA-100 exam questions in a concise and undisturbed environment. In addition, you will find a lot of small buttons, which can give you a lot of help. Some buttons are used to hide or show the answer. What's more important is that we have spare space, so you can take notes under each question in the process of learning ACA-100 Study Tool. When you start, there will be a timer to help you to time, so that you can finish the problem within the prescribed time and it can create an environment. If you are satisfied with our ACA-100 exam questions, you can make a choice to purchase them.

Appian Certified Analyst Sample Questions (Q47-Q52):

NEW QUESTION # 47

What is the primary benefit of using Appian's Record Type feature?

- A. It allows for the creation of static forms.
- B. It automates user interface design.
- C. It facilitates the display of external data in an integrated manner.
- D. It enables the integration of third-party APIs.

Answer: C

NEW QUESTION # 48

You are designing a user interface that requires a confirmation message when the user attempts to delete a row.

Review the image with the confirmation message:

"Are you sure you want to delete the item?"

According to best practices, which button labels should you choose?

- A. Back, Next
- B. False, True
- C. Cancel, Delete
- D. Reject, Approve

Answer: C

Explanation:

According to UI/UX best practices, the button labels in a confirmation dialog should be clear and directly related to the action the user is about to take. "Cancel" allows the user to abort the action, while "Delete" confirms the action to delete the item. This approach ensures that the user understands exactly what will happen when they click either button, reducing the risk of accidental deletion or confusion.

NEW QUESTION # 49

What are the two best uses for a "Staging" or "Parallel to Prod" environment (separate from Dev, Test, and Prod environments)?

- A. Unit testing development stories
- B. Practicing complex production deployments
- C. Sprint acceptance testing
- D. Testing a new release for compatibility with existing Production code/settings

Answer: B,D

Explanation:

A "Staging" or "Parallel to Prod" environment is a crucial part of the software deployment lifecycle. It is used to mirror the Production environment as closely as possible, allowing teams to test new releases and practice deployments without affecting live users.

Testing Compatibility (B):

Staging is the ideal environment to ensure that new code releases are compatible with the existing production settings and configurations.

This helps in identifying any potential issues that could disrupt the live environment before the actual deployment.

Practicing Deployments (C):

Staging is also used to rehearse complex production deployments. This practice helps ensure that the deployment process is smooth and that all steps are properly executed without errors.

It reduces the risk of downtime or issues during the actual production deployment.

Why Not Other Options?:

A . Unit Testing Development Stories: Unit testing is typically done in the Dev or Test environments, not in Staging.

D . Sprint Acceptance Testing: This testing is generally conducted in the Test environment as part of the sprint cycle, not in Staging.

Appian Environment Management Guide: Best Practices for Staging Environments Using the Staging environment for compatibility testing and deployment practice ensures a smoother and more reliable transition to Production.

NEW QUESTION # 50

You are an Appian Analyst.

According to best practices, which other role should you work with to create process models as a part of requirements gathering?

- A. Product Manager
- B. Scrum Master
- C. Architect
- D. Product Owner

Answer: D

Explanation:

As an Appian Analyst, collaborating with a Product Owner during the creation of process models is considered best practice. The Product Owner is responsible for defining the requirements and ensuring that the process models align with the business goals and needs. The Product Owner has a deep understanding of the product vision and user stories, which are crucial during the

requirements gathering phase.

Role of Product Owner:

The Product Owner provides detailed requirements and prioritizes them based on business needs.

They ensure that the process models being developed accurately reflect the intended business processes and user stories.

Close collaboration with the Product Owner ensures that the process models are aligned with both the technical and business aspects of the project.

Why Not Other Options?:

A . Product Manager: Typically focuses on the overall product strategy and market alignment rather than detailed process modeling.

C . Architect: While architects provide valuable input on the system's design and architecture, they are not primarily responsible for requirements gathering.

D . Scrum Master: The Scrum Master facilitates the Agile process but does not directly contribute to defining or modeling business processes.

NEW QUESTION # 51

An agile team has a user story at the top of its backlog. It reads:

"As a Hiring Manager, I want to be able to filter all of the candidates who have applied to my department's job posting in the last week so that I can schedule interviews for the qualified candidates." This story does not meet the team's Definition of Ready (DoR) as filter criteria are being determined.

What is the status for this user story?

- A. Pending
- B. Ready for Development
- C. Ready for quality assurance (QA)
- D. Done

Answer: A

Explanation:

The status of the user story is Pending because it does not yet meet the team's Definition of Ready (DoR). The filter criteria, which are critical to the functionality described in the user story, have not been fully determined. Until this information is clarified, the story cannot be considered ready for development or any subsequent phases like QA. Appian Documentation - User Stories and Definitions of Ready Note: The user story cannot be marked as Done (A), Ready for Development (B), or Ready for QA (D) because it lacks critical details needed for development to proceed.

NEW QUESTION # 52

.....

Our ACA-100 prepare questions are suitable for people of any culture level. According to different audience groups, our ACA-100 preparation materials for the examination of the teaching content of a careful division, so that every user can find a suitable degree of learning materials. More and more candidates choose our ACA-100 Quiz guide, they are constantly improving, so what are you hesitating about? As long as users buy our products online, our ACA-100 practice materials will be shared in five minutes, so hold now, but review it! This may be the best chance to climb the top of your life.
