Latest C-CPI-2506 Test Cost - C-CPI-2506 Latest Guide Files

Choosing our C-CPI-2506 exam quiz will be a wise decision that you make, because this decision may have a great impact in your future development. Having the certificate may be something you have always dreamed of, because it can prove that you have certain strength. Our C-CPI-2506 exam questions can provide you with services with pretty quality and help you obtain a certificate. Our C-CPI-2506 Learning Materials are made after many years of practical efforts and their quality can withstand the test of practice. And you will obtain the C-CPI-2506 certification just for our C-CPI-2506 study guide.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	<ul style="list-style-type: none"> • Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 3	<ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 4	<ul style="list-style-type: none"> • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

SAP Certified Associate - Integration Developer Sample Questions (Q12-Q17):

NEW QUESTION # 12

What can you use to prevent overload in an OData request and reply call?

- A. HTTP adapter
- B. Query filter
- **C. Paging**
- D. Stop parameter

Answer: C

Explanation:

To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options \$top and \$skip to specify how many records you want to fetch and how many records you want to skip in each request. This reduces the network load and improves the performance of the OData service. Reference: OData API | SAP Help Portal, SAP Integration Suite: enrich a payload with OData Service | SAP Blogs

NEW QUESTION # 13

Which part of the proxy URL is provided by the initial configuration step of the API Management?

- A. Service name
- **B. Virtual host**
- C. Name of the API management
- D. Version

Answer: B

Explanation:

To set up the API Management capability within SAP Integration Suite, you must provide a virtual host as part of the initial configuration step. The virtual host is a host alias that identifies your organization and is used as the base URL of your API proxies. For example, if your virtual host is myorg, your API proxy URL will look like this:

<https://myorg.apimanagement.hana.ondemand.com/<api-name>>. The virtual host can be changed later in the API portal settings.

NEW QUESTION # 14

Which log level must you use to examine the payload at specific processing steps in an integration flow?

- A. Info
- B. Debug
- C. Error
- **D. Trace**

Answer: D

Explanation:

To examine the payload at specific processing steps in an integration flow, you must use the Trace log level. The Trace log level provides the most detailed information about the message processing, including the payload content and the headers at each step. You can use the Message Processing Log to view the trace logs for a specific message. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 15

Why does the API Management capability of the SAP Integration Suite require API providers?

- **A. To incorporate APIs from source systems**
- B. To create authenticated API instances
- C. To create APIs

Answer: A

Explanation:

In API Management (Integration Suite):

API Providers represent backend systems (e.g., SAP S/4HANA, SuccessFactors, third-party APIs).

They are required to connect and incorporate APIs from those systems into API Management.

Once defined, API Proxies are created from API Providers to expose APIs securely.

Other options:

Authentication is handled via policies, not API Providers.

APIs are created as API Proxies, not directly by Providers.

Thus, the purpose of API Providers is to incorporate APIs from source systems.

NEW QUESTION # 16

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. AMQP
- **B. OData**
- C. Mail
- D. SFTP

Answer: B

Explanation:

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources.
