If you lack confidence for your exam, you can strengthen your confidence for your exam through using CWAP-405 exam torrent of us. CWAP-405 Soft test engine can simulate the real exam environment, so that you can know the procedure for the exam, and your confidence for the exam can also be built up. What's more, CWAP-405 Exam Braindumps are famous for instant access to download, and you can receive downloading link and password within ten minutes, so you start the training right now. You can enjoy free update for 365 days for CWAP-405 test materials after payment, and the update version will be sent to you automatically.

The passing rate of our CWAP-405 exam materials are very high and about 99% and so usually the client will pass the CWAP-405 exam successfully. If any questions or doubts on the CWAP-405 training material exist, the client can contact our online customer service or send mails to contact us and we will solve them as quickly as we can. We always want to let the clients be satisfied and provide the best CWAP-405 Test Torrent and won't waste their money and energy. As long as you bought our CWAP-405 practice guide, you will love it for sure.

Test CWAP-405 Pass4sure - Questions CWAP-405 Pdf

In a word, you can try our free CWAP-405 study guide demo before purchasing, Certified Wireless Analysis Professional Pdf After the researches of many years, we found only the true subject of past-year exam was authoritative and had time-validity, For your benefit, Pass4sures is putting forth you to attempt the free demo and CWNP CWAP-405 Exam Dumps the best quality highlights of the item, because nobody gives this facility only the Pass4sures CWAP-405 Free Learning provide this facility. The example on the

right was a simple widget designed Reliable CWAP-405 Pdf to track points in a rewards program, The pearsonvue website is not affiliated with us, Although computers are great at gathering, manipulating, and calculating raw data, humans prefer their data presented in an orderly fashion.

CWNP Certified Wireless Analysis Professional Sample Questions (Q105-Q110):

NEW QUESTION # 105

Which one of these is the most important in the WLAN troubleshooting methodology among those listed?

- A. Obtain detailed -knowledge of the wireless vendors debug and logging options
- B. Talk to the end users about their experiences
- **C. Observe the problem**
- D. Interview the network manager about the issues being experienced

Answer: C

Explanation:

Observing the problem is the most important step in the WLAN troubleshooting methodology among those listed. This step involves capturing and analyzing the relevant data from the wireless network, such as packets, frames, spectrum, and performance metrics. Observing the problem helps to verify the existence and scope of the issue, identify the root cause and possible solutions, and validate the results of any actions taken. The other steps are also important, but they are not as critical as observing the problem.

References:

* CWAP-405 Objectives, Section 1.2: Observe the problem

NEW QUESTION # 106

You are analyzing a packet decode of a Probe Request and notice the SSID element has a length of zero. What do you conclude about the transmitting STA?

- A. The STA's WLAN adaptor is disabled
- **B. The STA is discovering a list of available BSSs**
- C. The WLAN adaptor is configured in promiscuous mode
- D. The STA is operating in Ad-Hoc mode

Answer: B

Explanation:

An SSID element with a length of zero in a Probe Request indicates a broadcast probe. This is used by a station to solicit Probe Responses from any nearby access point, allowing it to discover which BSSs are available without targeting a specific SSID.

NEW QUESTION # 107

As a wireless network consultant you have been called in to troubleshoot a high-priority issue for one of your customers. The customer's office is based on two floors within a multi-tenant office block. On one of these floors (floor 5) users cannot connect to the wireless network. During their own testing the customer has discovered that users can connect on floor 6 but not when they move to the floor 5. This issue is affecting all users on floor 5 and having a negative effect on productivity.

To troubleshoot this issue, you perform both Spectrum and Protocol Analysis. The Spectrum Analysis shows the presence of Bluetooth signals which you have identified as coming from wireless mice. In the protocol analyzer you see the top frame on the network is Deauthentication frames. On closer investigation you see that the Deauthentication frames' source addresses match the BSSIDs of your customers APs and the destination address is FF:FF:FF:FF:FF:FF.

What do you conclude from this troubleshooting exercise?

- **A. The users on floor 5 are being subjected to a denial of service attack, as this is happening across the entire floor it is likely to be a misconfigured WIPS solution belonging to the tenants on the floor below**
- B. The customer should replace all their Bluetooth wireless mice as they are stopping the users on floor 5 from connecting to the wireless network
- C. The CCI from the APs on the floor 4 is the problem and you need to ask the tenant below to turn down their APs Tx power

- D. The customers APs are misbehaving and a technical support case should be open with the vendor

Answer: A

Explanation:

The users on floor 5 are being subjected to a denial of service attack, as this is happening across the entire floor it is likely to be a misconfigured WIPS solution belonging to the tenants on the floor below. This is because the Deauthentication frames have a source address that matches the BSSIDs of the customer's APs and a destination address that is a broadcast address (FF:FF:FF:FF:FF:FF). This indicates that someone is sending spoofed Deauthentication frames to all STAs associated with the customer's APs, causing them to disconnect from the wireless network. This is a common type of DoS attack on wireless networks, and it could be caused by a rogue device or a WIPS solution that is configured to protect the wireless network of another tenant on the floor below¹². NEW QUESTION # 108

Which Spectrum Analyzer plot would show the percentage of time a signal is measured at a particular frequency?

- A. Waterfall
- B. Duty Cycle
- **C. Real-Time FFT**
- D. Swept Spectrogram

Answer: C

Explanation:

A Real-Time FFT plot shows the percentage of time a signal is present at specific frequencies.

This allows you to see how often energy appears at a given frequency, making it useful for identifying intermittent or periodic transmissions.

NEW QUESTION # 109

A manufacturing facility has installed a new automation system which incorporates an 802.11 wireless network. The automation system is controlled from tablet computers connected via the WLAN. However, the automation system has not gone live due to problem with the tablets connecting to the WLAN. The WLAN vendor has been onsite to perform a survey and confirmed good primary and secondary coverage across the facility. As a CWAP you are called in to perform Spectrum Analysis to identify any interference sources.

From the spectrum analysis, you did not identify any interference sources but were able to correctly identify the issue. Which of the following issues did you identify from the spectrum analysis?

- A. The tablets are entering power save mode and failing to wake up to receive the access points transmissions
- B. The tablets are connecting to the wrong SSID
- C. A high noise floor has resulted in a SNR of less than 20dB
- **D. There is a power mismatch between the APs and the clients**

Answer: D

Explanation:

The most likely issue that can be identified from the spectrum analysis is a power mismatch between the APs and the clients. A power mismatch occurs when the APs transmit at a higher power level than the clients, or vice versa. This can cause asymmetric communication, where one side can hear the other, but not vice versa.

This can result in poor performance, disconnections, or packet loss. A spectrum analysis can reveal a power mismatch by showing different signal amplitudes or RSSI values for the APs and the clients on the same channel or frequency. The other options are not correct, as they cannot be identified from the spectrum analysis alone. The tablets' SSID, power save mode, and noise floor can be determined by using other tools or methods, such as protocol analysis, site survey, or device configuration. NEW QUESTION # 110

.....

According to the survey, the average pass rate of our candidates has reached 99%. High passing rate must be the key factor for choosing, which is also one of the advantages of our CWAP-405 real study dumps. Our CWAP-405 exam questions have been widely acclaimed among our customers, and the good reputation in industry prove that choosing our study materials would be the best way for you, and help you gain the CWAP-405 Certification successfully. With about ten years' research and development we still keep updating our CWAP-405 prep guide, thus your study process would targeted and efficient.
