Proven and Instant Method to Pass Linux Foundation CKA Exam

For candidates who are going to buy CKA exam torrent online, you may pay much attention to the privacy protection. We respect the private information of you, if you choose us for your CKA exam materials, your personal information will be protected well. Once the order finishes, your personal information such as your name and email address will be concealed. In addition, we have a professional team to research the professional knowledge for CKA Exam Materials, and you can get the latest information timely. Free update for one year is available, and the update version for CKA training material will be sent to your email automatically.

As the constant increasing of difficulty index of the CKA training materials, passing rate is very important when you choose the study materials. Our study materials can guarantee you to pass the CKA exam for the first time. After all, all of our questions are the same with the real exam questions. It will cost too much time if you still learn by yourself and memorize the boring knowledge of your reference books, you should purchase our CKA practice quiz to help you pass the exam soon.

Free PDF Quiz 2026 The Best Linux Foundation CKA: Frenquent Certified Kubernetes Administrator (CKA) Program Exam Update

All we want you to know is that people are at the heart of our manufacturing philosophy, for that reason, we place our priority on intuitive functionality that makes our Kubernetes Administrator exam question to be more advanced. Our CKA exam prep is capable of making you test history and review performance, and then you can find your obstacles and overcome them. In addition, once you have used this type of CKA Exam Question online for one time, next time you can practice in an offline environment.

The CKA exam is a hands-on, performance-based exam that requires candidates to perform tasks on a live Kubernetes cluster. CKA exam lasts for two hours and consists of 24 performance-based tasks. Candidates must complete all tasks within the allocated time frame to pass the exam. CKA Exam is proctored, and candidates must have a webcam to ensure the integrity of the exam.

Linux Foundation Certified Kubernetes Administrator (CKA) Program Exam Sample Questions (Q75-Q80):

NEW QUESTION # 75
Score: 4%

```
[student@node-3K $ | kube
ctl config use-context k
8s
```

Task
Check to see how many nodes are ready (not including nodes tainted NoSchedule) and write the number to /opt/KUSC00402/kusc00402.txt

Answer:

Explanation:
See the solution below.
Explanation
Solution:
kubectl describe nodes | grep ready|wc -l
kubectl describe nodes | grep -i taint | grep -i noschedule |wc -l
echo 3 > /opt/KUSC00402/kusc00402.txt
#
kubectl get node | grep -i ready |wc -l
taintsnoSchedule
kubectl describe nodes | grep -i taints | grep -i noschedule |wc -l
#
echo 2 > /opt/KUSC00402/kusc00402.txt

NEW QUESTION # 76
Create the nginx pod with version 1.17.4 and expose it on port 80

Answer:

Explanation:
kubectl run nginx --image=nginx:1.17.4 --restart=Never -- port=80

NEW QUESTION # 77
Create a pod that having 3 containers in it? (Multi-Container)

- A. image=nginx, image=redis, image=consul
  Name nginx container as "nginx-container"
  Name redis container as "redis-container"
  Name consul container as "consul-container"
  Create a pod manifest file for a container and append container
  section for rest of the images
  kubectl run multi-container --generator=run-pod/v1 --image=nginx --
  dry-run -o yaml > multi-container.yaml
  # then
  vim multi-container.yaml
  apiVersion: v1
  kind: Pod
  metadata:
    labels:
    run: multi-container

- B. image=nginx, image=redis, image=consul
  Name nginx container as "nginx-container"
  Name redis container as "redis-container"
  Name consul container as "consul-container"
  Create a pod manifest file for a container and append container
  section for rest of the images
  kubectl run multi-container --generator=run-pod/v1 --image=nginx --
  dry-run -o yaml > multi-container.yaml
  # then
  vim multi-container.yaml
  labels:
  run: multi-container
  name: multi-container
  spec:
  containers:
  - image: nginx
  name: nginx-container
  - image: redis
  name: consul-container
  restartPolicy: Always

Answer: A

NEW QUESTION # 78
Score: 4%

Task
Create a pod named kucc8 with a single app container for each of the following images running inside (there may be between 1 and 4 images specified): nginx + redis + memcached .

Answer:

Explanation:
Solution:
kubectl run kucc8 --image=nginx --dry-run -o yaml > kucc8.yaml
vi kucc8.yaml
apiVersion: v1
kind: Pod
metadata:

creationTimestamp: null
name: kucc8
spec:
containers:
- image: nginx
name: nginx
- image: redis
name: redis
- image: memcached
name: memcached
- image: consul
name: consul
#
kubectl create -f kucc8.yaml
#12.07

NEW QUESTION # 79
You have a Kubernetes cluster with a multi-tenant setup where different teams manage their own applications. You need to enforce a policy where only developers from the "engineering" team can create deployments for applications within the "dev" namespace. How would you implement this using RBAC?

Answer:

Explanation:
See the solution below with Step by Step Explanation.
Explanation:
Solution (Step by Step) :
Step 1: Create a Role for the "engineering" team

```
apiVersion: rbac.authorization.k8s.io/v1
kind: Role
metadata:
  name: engineering-role
  namespace: dev
rules:
- apiGroups: ["apps"]
  resources: ["deployments"]
  verbs: ["create"]
```

Step 2: Create a RoleBinding to assign the role to the "engineering" team

```
apiVersion: rbac.authorization.k8s.io/v1
kind: RoleBinding
metadata:
  name: engineering-rolebinding
  namespace: dev
roleRef:
  apiGroup: rbac.authorization.k8s.io
  kind: Role
  name: engineering-role
subjects:
- kind: User
  name: john.doe@example.com
  apiGroup: rbac.authorization.k8s.io
```

- The Role defines the permissions for the "engineering" team, allowing them to create deployments in the "dev" namespace. - The RoleBinding associates the "engineering-role" with the user "john.doe@example.com" (representing a developer from the "engineering" team). Step 3: Validate the setup - A developer from the "engineering" team should be able to create deployments in the "dev" namespace. - Other users or teams without the appropriate permissions should be prevented from creating deployments in the "dev" namespace.

NEW QUESTION # 80
......

Passing the Certified Kubernetes Administrator (CKA) Program Exam CKA exam is your best career opportunity. The rich experience with relevant certificates is important for enterprises to open up a series of professional vacancies for your choices. Our Linux Foundation CKA learning quiz bank and learning materials look up the latest CKA questions and answers based on the topics you choose.
