## Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Cybersecurity:</b> This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&amp;CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Secure Access:</b> This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Endpoint Security:</b> This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.</li> </ul>

Topic 4	<ul style="list-style-type: none"><li>• <b>Cloud Security:</b> This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.</li></ul>

### Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q111-Q116):

#### NEW QUESTION # 111

Which component of cloud security is used to identify misconfigurations during the development process?

- A. Container security
- **B. Code security**
- C. SaaS security
- D. Network security

**Answer: B**

Explanation:

Code security focuses on identifying vulnerabilities and misconfigurations early in the development process.

It uses tools like static code analysis and infrastructure-as-code (IaC) scanning to ensure secure coding and configuration before deployment.

#### NEW QUESTION # 112

Which TCP/IP sub-protocol operates at the Layer7 of the OSI model?

- A. MAC
- B. UDP
- **C. SNMP**
- D. NFS

**Answer: C**

Explanation:

# Application (Layer 7 or L7): This layer identifies and establishes availability of communication partners, determines resource availability, and synchronizes communication.

# Presentation (Layer 6 or L6): This layer provides coding and conversion functions (such as data representation, character conversion, data compression, and data encryption) to ensure that data sent from the Application layer of one system is compatible with the Application layer of the receiving system.

# Session (Layer 5 or L5): This layer manages communication sessions (service requests and service responses) between networked systems, including connection establishment, data transfer, and connection release.

# Transport (Layer 4 or L4): This layer provides transparent, reliable data transport and end-to-end transmission control.

#### NEW QUESTION # 113

Which network firewall primarily filters traffic based on source and destination IP address?

- A. Stateless
- B. Proxy
- C. Application
- D. Stateful

**Answer: A**

Explanation:

A stateless firewall is a network firewall that primarily filters traffic based on source and destination IP address, as well as port numbers and protocols. A stateless firewall does not keep track of the state or context of network connections, and only inspects packet headers. A stateless firewall is faster and simpler than a stateful firewall, but it is less secure and flexible. A stateless firewall cannot block complex attacks or inspect packet contents for malicious payloads. #### NEW QUESTION # 114

Which of the following is an AWS serverless service?

- A. Beta
- B. Kappa
- C. Delta
- D. Lambda

**Answer: D**

Explanation:

Examples of serverless environments include Amazon Lambda and Azure Functions. Many PaaS offerings, such as Pivotal Cloud Foundry, also are effectively serverless even if they have not historically been marketed as such. Although serverless may appear to lack the container-specific, cloud native attribute, containers are extensively used in the underlying implementations, even if those implementations are not exposed to end users directly.

#### NEW QUESTION # 115

What is the purpose of SIEM?

- A. Automating the security team's incident response
- B. Real-time monitoring and analysis of security events
- C. Securing cloud-based applications
- D. Filtering webpages employees are allowed to access

**Answer: B**

Explanation:

SIEM stands for security information and event management. It is a technology that collects, analyzes, and reports on security-related data from various sources within an organization's network. The purpose of SIEM is to provide real-time monitoring and analysis of security events, such as user logins, file access, and changes to critical system files. SIEM helps security teams to detect and respond to potential threats, as well as to meet compliance requirements and improve their cybersecurity posture.
