## Check out the demo of the real, 100 percent free Cisco 100-160

Our 100-160 real dumps has received popular acceptance worldwide with tens of thousands of regular exam candidates who trust our proficiency. Up to now, the passing rate is 98 to 100 percent. What made our 100-160 study guide so amazing? The answer that we only supply the latest and valid 100-160 Exam Braindumps for our customers and first-class after-sales services come after the first-class 100-160 learning engine. We're also widely praised by our perfect services.

## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q32-Q37):

### NEW QUESTION # 32

Which of the following represents a technique used in Classless Inter-Domain Routing (CIDR)?

- A. Compressed MAC addresses
- B. Binary notation for IP addresses
- **C. Variable-length subnet masks**
- D. 32-bit IP addresses

**Answer: C**

Explanation:

Classless Inter-Domain Routing (CIDR) is a technique used to allocate and manage IP addresses more efficiently. It involves using variable-length subnet masks (VLSMs), which allow the network to have subnets of different sizes. VLSMs provide flexibility in allocating IP addresses by allowing the network administrator to choose the appropriate number of network and host bits based on the network requirements.

### NEW QUESTION # 33

Which of the following is a key principle of access management?

- A. Using the same access controls for all types of resources
- B. Granting access based solely on job titles
- **C. Implementing least privilege and need-to-know principles**
- D. Providing open and unrestricted access to all users

**Answer: C**

Explanation:

Access management is the process of controlling and managing user access to resources based on the principles of least privilege and need-to-know. The principle of least privilege ensures that users are only granted the minimum level of access necessary to perform their specific tasks, reducing the risk of unauthorized access or privilege escalation. The need-to-know principle restricts access to sensitive information only to authorized individuals who require it for their job responsibilities. These principles contribute to a strong access control system by ensuring that access is only granted to those who genuinely need it and minimizing the potential for unauthorized access or data breaches.

### NEW QUESTION # 34

What is an Advanced Persistent Threat (APT)?

- A. A type of malware that spreads rapidly through a network.
- B. A cyberattack that compromises multiple devices simultaneously.
- **C. A sophisticated and targeted attack that aims to gain unauthorized access and maintain persistence over a long period.**
- D. A vulnerability in network communication protocols.

**Answer: C**

Explanation:

Advanced Persistent Threats (APTs) are stealthy and prolonged attacks targeted at specific organizations or entities. APTs typically employ sophisticated techniques, including social engineering and zero-day exploits. The primary objectives of APTs are to gain unauthorized access, maintain persistence within the target network or system, and conduct reconnaissance or exfiltrate sensitive data without being detected for an extended period of time.

### NEW QUESTION # 35

What is the main purpose of a disaster recovery plan?

- A. Minimizing the impact of disasters
- B. Identifying potential threats and vulnerabilities
- **C. Recovering data after a disaster**
- D. Preventing disasters from occurring

**Answer: C**

Explanation:

The primary purpose of a disaster recovery plan is to ensure that data, systems, and operations can be restored in a timely manner following a disaster. It focuses on recovering critical resources and minimizing downtime to resume normal business operations as quickly as possible.

#### NEW QUESTION # 36

Vulnerability refers to:

- A. The degree to which a threat is capable of causing damage.
- B. The likelihood of a security incident occurring.
- **C. The exploitation of a vulnerability by a threat.**
- D. The potential for loss or harm as a result of a threat exploiting a vulnerability.

**Answer: C**

Explanation:

Vulnerability refers to a weakness or flaw in a system that can be exploited by a threat. It is the state of being exposed to the possibility of being attacked or harmed.

#### NEW QUESTION # 37

.....

Our experts are not slavish followers who just cut and paste the content into our 100-160 practice materials, all 100-160 exam questions are elaborately compiled by them. Just a small amount of money, but you can harvest colossal success with potential bright future. So we have the courage and justification to declare the number one position in this area, and choosing 100-160 Actual Exam is choosing success.
