CSX-P CSX Cybersecurity Practitioner Certification Practice Course

About the Service:

CSX-P CSX Cybersecurity Practitioner Certification Practice Course: Boost Your Expertise and Skills
Enhance your proficiency in the cybersecurity domain with our CSX-P CSX Cybersecurity Practitioner Certification Practice Course. Designed for professionals seeking to validate their abilities and gain a competitive edge, this comprehensive training program offers in-depth knowledge and practical exercises to prepare you for the CSX-P certification exam.
Our course provides an extensive curriculum that covers all key areas required to succeed in the cybersecurity industry. From threat intelligence and vulnerability management to incident response and recovery, you'll develop a well-rounded skill set that aligns with industry best practices. Furthermore, our experienced instructors will guide you through real-world scenarios and case studies, ensuring you're fully prepared to address complex cybersecurity challenges.
Don't miss this opportunity to further your career in cybersecurity. Enroll in our CSX-P CSX Cybersecurity Practitioner Certification Practice Course and take the confident step towards becoming a recognized expert in the field.

Palo Alto Networks Cybersecurity Practitioner Cybersecurity-Practitioner Prüfungsfragen mit Lösungen (Q124-Q129):

124. Frage

How does DevSecOps improve the Continuous Integration/Continuous Deployment (CI/CD) pipeline?

- A. DevSecOps improves pipeline security by assigning the security team as the lead team for continuous deployment
- B. DevSecOps ensures the pipeline has horizontal intersections for application code deployment
- C. DevSecOps does security checking after the application code has been processed through the CI/CD pipeline
- **D. DevSecOps unites the Security team with the Development and Operations teams to integrate security into the CI/CD pipeline**

Antwort: D

Begründung:

DevSecOps takes the concept behind DevOps that developers and IT teams should work together closely, instead of separately, throughout software delivery and extends it to include security and integrate automated checks into the full CI/CD pipeline. The integration of the CI/CD pipeline takes care of the problem of security seeming like an outside force and instead allows developers to maintain their usual speed without compromising data security

125. Frage

Which next-generation firewall (NGFW) deployment option provides full application visibility into Kubernetes environments?

- A. SASE
- B. Physical
- **C. Container**
- D. Virtual

Antwort: C

Begründung:

A container-based NGFW is specifically designed to integrate with Kubernetes environments, providing full application visibility and control within containerized workloads. It operates at the pod level, making it ideal for securing dynamic microservices architectures.

126. Frage

In addition to local analysis, what can send unknown files to WildFire for discovery and deeper analysis to rapidly detect potentially unknown malware?

- A. AutoFocus
- B. MineMild
- C. Cortex XDR
- D. Cortex XSOAR

Antwort: C

Begründung:

In addition to local analysis, Cortex XDR can send unknown files to WildFire for discovery and deeper analysis to rapidly detect.

127. Frage

Which methodology does Identity Threat Detection and Response (ITDR) use?

- A. Rule-based activity prioritization
- B. Comparison of alerts to signatures
- C. Behavior analysis
- D. Manual inspection of user activities

Antwort: C

Begründung:

Identity Threat Detection and Response (ITDR) leverages behavior analysis to identify suspicious or anomalous activities associated with user identities. This methodology involves continuously monitoring user authentication patterns, access events, and privilege escalations to build a baseline of "normal" behavior. By detecting deviations-such as unusual login locations, timeframes, or excessive access attempts-ITDR can flag potential identity compromises or insider threats that traditional signature or rule-based systems often miss. Palo Alto Networks' ITDR integrates behavioral analytics with threat intelligence to deliver real-time alerts and automated response capabilities, essential in mitigating credential abuse and lateral movement within networks. This behavioral approach is crucial for adapting to sophisticated identity attacks that evolve constantly.

128. Frage

Which statement describes DevOps?

- A. DevOps is a combination of the Development and Operations teams
- B. DevOps is a culture that unites the Development and Operations teams throughout the software delivery process
- C. DevOps is a set of tools that assists the Development and Operations teams throughout the software delivery process
- D. DevOps is its own separate team

Antwort: B

Begründung:

DevOps is not:

* A combination of the Dev and Ops teams: There still are two teams; they just operate in a communicative, collaborative way.

* Its own separate team: There is no such thing as a "DevOps engineer." Although some companies may appoint a "DevOps team" as a pilot when trying to transition to a DevOps culture, DevOps refers to a culture where developers, testers, and operations personnel cooperate throughout the entire software delivery lifecycle.

* A tool or set of tools: Although there are tools that work well with a DevOps model or help promote DevOps culture, DevOps ultimately is a strategy, not a tool.

* Automation: Although automation is very important for a DevOps culture, it alone does not define DevOps.
