

Free PDF Quiz 2026 Fortinet FCSS_EFW_AD-7.6: FCSS - Enterprise Firewall 7.6 Administrator High Hit-Rate New Test Objectives

BONUS!!! Download part of ITPassLeader FCSS_EFW_AD-7.6 dumps for free: https://drive.google.com/open?id=1Fp_jhdTWivwY2AO3ufygPeSb572rkcfk

Everyone has different learning habits, FCSS_EFW_AD-7.6 exam simulation provide you with different system versions. Based on your specific situation, you can choose the version that is most suitable for you, or use multiple versions at the same time. After all, each version of FCSS_EFW_AD-7.6 Preparation questions have its own advantages. If you are very busy, you can only use some of the very fragmented time to use our FCSS_EFW_AD-7.6 study materials.

Fortinet FCSS_EFW_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security Profiles: This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL• SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.
Topic 2	<ul style="list-style-type: none">• Routing: This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.
Topic 3	<ul style="list-style-type: none">• VPN: This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.

Topic 4	<ul style="list-style-type: none"> • System Configuration: This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.
Topic 5	<ul style="list-style-type: none"> • Central Management: This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.

Validate Your Skills with Fortinet FCSS_EFW_AD-7.6 Exam Dumps

Fortinet FCSS_EFW_AD-7.6 Certification has great effect in this field and may affect your career even future. FCSS - Enterprise Firewall 7.6 Administrator real questions files are professional and high passing rate so that users can pass the exam at the first attempt. High quality and pass rate make us famous and growing faster and faster.

Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q56-Q61):

NEW QUESTION # 56

Refer to the exhibit, which shows a revision history window in the FortiManager device layer.

ID	Date & Time	Name	Created by	Installation	Comments
✓ 10	2024-08-21 14:30:54		script_manager	Retrieved	
9	2024-08-21 14:02:55	AutoUpdate	AutoUpdate	Auto Updated	Autoretrieve merged config
8	2024-06-24 04:52:47	DCFV	admin	Installed	

The IT team is trying to identify the administrator responsible for the most recent update in the FortiGate device database. Which conclusion can you draw about this scenario?

- A. The user script_manager is an API user from the Fortinet Developer Network (FDN) retrieving a configuration.
- B. This retrieved process was automatically triggered by a Remote FortiGate Directly (via CLI) script.
- C. To identify the user who created the event, check it on the Configuration and Installation widget on FortiGate within the FortiManager device layer.
- **D. Find the user in the FortiManager system logs and use the type=script command to find the administrator user in the user field.**

Answer: D

Explanation:

The Configuration Revision History window in FortiManager shows that the most recent configuration change (ID 10) was created by script_manager with the action Retrieved.

Since script_manager is a system-level script execution user, the IT team needs to find who actually triggered this script. This can be done by:

Checking the FortiManager system logs for script execution events.

Using the type=script filter to locate the administrator associated with the script execution.

NEW QUESTION # 57

Refer to the exhibit, which contains a partial command output.

```
FortiGate # get router info bgp neighbors
VRF 0 neighbor table:
BGP neighbor is 100.65.4.1, remote AS 65300, local AS 65200, external link
BGP version 4, remote router ID 0.0.0.0
BGP state = Idle
Not directly connected EBGP
Last read      , hold time is 180, keepalive interval is 60 seconds
Configured hold time is 180, keepalive interval is 60 seconds
Received 0 messages, 0 notifications, 0 in queue
Sent 0 messages, 0 notifications, 0 in queue
Route refresh request: received 0, sent 0
NLRI treated as withdraw: 0
Minimum time between advertisement runs is 30 seconds
Update source is Loopback
```

The administrator has configured BGP on FortiGate. The status of this new BGP configuration is shown in the exhibit. What configuration must the administrator consider next?

- **A. Enable ebgp-enforce-multihop.**
- B. Contact the remote peer administrator to enable BGP
- C. Configure a static route to 100.65.4.1.
- D. Configure the local AS to 65300.

Answer: A

Explanation:

From the BGP neighbor status output, the key issue is that BGP is stuck in the "Idle" state, meaning the FortiGate is unable to establish a BGP session with its peer 100.65.4.1 (Remote AS 65300).

The output also shows:

"Not directly connected EBGP" # This means the BGP peer is not on the same subnet, requiring multihop BGP.

"Update source is Loopback" # Since a loopback interface is used, FortiGate must be configured to allow BGP neighbors over multiple hops.

To resolve this issue, the administrator must enable ebgp-enforce-multihop, which allows BGP sessions to be established even when the neighbors are not directly connected.

NEW QUESTION # 58

A FortiGate device with UTM profiles is reaching the resource limits, and the administrator expects the traffic in the enterprise network to increase.

The administrator has received an additional FortiGate of the same model.

Which two protocols should the administrator use to integrate the additional FortiGate device into this enterprise network? (Choose two.)

- A. FGCP in active-passive mode and with VDOM disabled
- **B. FGCP in active-active mode and with switches**
- **C. FGSP with external load balancers**
- D. VRRP with switches

Answer: B,C

Explanation:

When adding an additional FortiGate to an enterprise network that is already reaching its resource limits, the goal is to distribute traffic efficiently and ensure high availability.

FGSP (FortiGate Session Life Support Protocol) with external load balancers FGSP allows session-aware load balancing between multiple FortiGate units without requiring them to be in an HA (High Availability) cluster.

itpassleader.com

FORTINET®

With external load balancers, incoming traffic is evenly distributed across multiple FortiGate devices.

itpassleader.com

FORTINET®

This approach is useful for scaling out traffic handling capacity while ensuring that sessions remain synchronized between firewalls.

itpassleader.com

FORTINET®

FGSP is effective when stateful failover is required but without the constraints of traditional HA.

itpassleader.com

FORTINET®

FGCP (FortiGate Clustering Protocol) in active-active mode and with switches FGCP active-active mode enables multiple FortiGate devices to share traffic loads, increasing throughput and efficiency.

itpassleader.com

FORTINET®

Active-active mode is suitable for balancing UTM processing across multiple FortiGates, making it ideal when resource limits are a concern.

itpassleader.com

FORTINET®

Using switches ensures redundancy and avoids single points of failure in the network.

itpassleader.com

FORTINET®

This mode is commonly used in enterprise networks where both scalability and redundancy are required.

itpassleader.com

FORTINET®

NEW QUESTION # 59

Which two statements about IKEv2 are true if an administrator decides to implement IKEv2 in the VPN topology? (Choose two.)

- A. It supports the extensible authentication protocol (EAP).
- B. It exchanges a minimum of two messages to establish a secure tunnel.
- C. It supports interoperability with devices using IKEv1.
- D. It includes stronger Diffie-Hellman (DH) groups, such as Elliptic Curve (ECP) groups.

Answer: A,D

Explanation:

IKEv2 (Internet Key Exchange version 2) is an improvement over IKEv1, offering enhanced security, efficiency, and flexibility in VPN configurations.

It includes stronger Diffie-Hellman (DH) groups, such as Elliptic Curve (ECP) groups.

IKEv2 supports stronger cryptographic algorithms, including Elliptic Curve Diffie-Hellman (ECDH) groups such as ECP256 and ECP384, providing improved security compared to IKEv1.

It supports the extensible authentication protocol (EAP).

IKEv2 natively supports EAP authentication, which allows integration with external authentication mechanisms such as RADIUS, certificates, and smart cards. This is particularly useful for remote access VPNs where user authentication must be flexible and secure.

NEW QUESTION # 60

An administrator is checking an enterprise network and sees a suspicious packet with the MAC address e0:23:fffc:00:86.

What two conclusions can the administrator draw? (Choose two.)

- A. The network includes FortiGate devices configured with the FGSP protocol.
- **B. The suspicious packet is related to a cluster with a group-id value lower than 255.**
- C. The suspicious packet corresponds to port 7 on a FortiGate device.
- **D. The suspicious packet is related to a cluster that has VDOMs enabled.**

Answer: B,D

Explanation:

The MAC address e0:23:fffc:00:86 follows the format used in FortiGate High Availability (HA) clusters.

When FortiGate devices are in an HA configuration, they use virtual MAC addresses for failover and redundancy purposes.

The suspicious packet is related to a cluster that has VDOMs enabled:

FortiGate devices with Virtual Domains (VDOMs) enabled use specific MAC address ranges to differentiate HA-related traffic.

This MAC address is likely part of that mechanism.

The suspicious packet is related to a cluster with a group-id value lower than 255:

FortiGate HA clusters assign virtual MAC addresses based on the group ID. The last octet (00:86) corresponds to a group ID that is below 255, confirming this option.

NEW QUESTION # 61

.....

They work closely and check all Fortinet FCSS_EFW_AD-7.6 exam practice test questions step by step and ensure the top standard of FCSS_EFW_AD-7.6 exam questions all the time. So rest assured that with the FCSS_EFW_AD-7.6 exam dumps you will get everything that you need to prepare and pass the Fortinet FCSS_EFW_AD-7.6 Certification Exam with good scores. Countless FCSS - Enterprise Firewall 7.6 Administrator exam candidates have passed their FCSS_EFW_AD-7.6 exam and they all got help from real and updated Fortinet FCSS_EFW_AD-7.6 exam questions. You can also be the next successful candidate for the FCSS_EFW_AD-7.6 certification exam.
