CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q79-Q84):

NEW QUESTION # 79
Before installing the Endpoint Security Management Server, it is necessary to consider this

- A. An Endpoint Security Gateway must be installed
- B. A Network Security Management Server must be installed
- C. MS SQL Server must be available with full admin access
- D. A Network Security Management Server must NOT be installed on the same machine

Answer: C

NEW QUESTION # 80
You are facing a lot of CPU usage and high bandwidth consumption on your Endpoint Security Server. You check and verify that everything is working as it should be, but the performance is still very slow. What can you do to decrease your bandwidth and CPU usage?

- A. You can use some of your Endpoints as Super Nodes since super nodes reduces bandwidth as well as CPU usage.
- B. Your company's size is not large enough to have a valid need for Endpoint Solution.
- C. Your company needs more bandwidth. You have to increase your bandwidth by 300%
- D. The managements High Availability sizing is not correct. You have to purchase more servers and add them to the cluster.

Answer: A

NEW QUESTION # 81
External Policy Servers are placed between the Endpoint clients and the Endpoint Security Management Server. How many Policy Servers are supported per environment?

- A. From 1 to 15 Policy Servers are supported
- B. From 1 to 5 Policy Servers are supported
- C. From 1 to 25 Policy Servers are supported
- D. From 1 to 20 Policy Servers are supported

Answer: D

NEW QUESTION # 82
What does the Endpoint Security Homepage offer useful resources for?

- A. Best Practices
- B. Unix Client OS Support
- C. Quantum Management
- D. Complicated Practices

Answer: A

Explanation:
The Endpoint Security Homepage, typically accessed via the Infinity Portal, provides resources to assist administrators in effectively deploying and managing Harmony Endpoint. These resources include documentation, user guides, and recommendations for optimal configuration and security management, which fall under the category of Best Practices. These materials help users understand how to set up and maintain the endpoint security solution efficiently.
Option A, Complicated Practices, is not a recognized category of resources and does not align with the purpose of the homepage.

Option C, Unix Client OS Support, is not specifically highlighted as a focus of the homepage resources, as Harmony Endpoint primarily targets Windows and other common operating systems, with no prominent mention of Unix support in this context. Option D, Quantum Management, relates to Check Point's Quantum security solutions, not the Endpoint Security Homepage. Therefore, the correct answer is B. Best Practices.

NEW QUESTION # 83

How does Full Disk Encryption (FDE) add another layer of security?

- A. By offering port protection
- B. By offering pre-boot protection
- C. By offering encryption
- D. By offering media encryption

Answer: B

Explanation:

Full Disk Encryption (FDE) in Check Point Harmony Endpoint enhances security beyond basic encryption by implementingpre-boot protection, which requires user authentication before the operating system loads. This is detailed in theCP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdfonpage 217, under "Check Point Full Disk Encryption":
"Combines Pre-boot protection, boot authentication, and strong encryption to make sure that only authorized users are given access to information stored on desktops and laptops." This statement highlights that pre-boot protection is a distinct layer of security, ensuring that the system remains inaccessible until authentication is completed. Further elaboration is found onpage 223, under "Authentication before the Operating System Loads (Pre-boot)":
"Pre-boot protection prevents unauthorized access to the operating system or bypass of boot protection." The pre-boot mechanism adds a critical layer by securing the system at the earliest stage of the boot process, distinguishing it from general encryption (which is a prerequisite but not the "additional layer" the question seeks). Thus,Option Bis the correct answer.
* Option A ("By offering media encryption")is incorrect because media encryption is a feature of MEPP, not FDE (see page 280).
* Option C ("By offering port protection")is also incorrect as port protection pertains to MEPP, not FDE (see page 280).
* Option D ("By offering encryption")is too vague and does not specify the additional layer; encryption is inherent to FDE, but pre-boot protection is the added security mechanism.
