It's not simple to achieve AWS Certified Developer Associate Exam (DVA-C02) (AWS-Certified-Developer-Associate) exam certification.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q140-Q145):

NEW QUESTION # 140

An application needs to use the IP address of the client in its processing. The application has been moved into AWS and has been placed behind an Application Load Balancer (ALB).

However, all the client IP addresses now appear to be the same. The application must maintain the ability to scale horizontally. Based on this scenario, what is the MOST cost-effective solution to this problem?

- A. Alter the application code to inspect the X-Forwarded-For header. Ensure that the code can work properly if a list of IP addresses is passed in the header.
- B. Remove the application from the ALB. Delete the ALB and change Amazon Route 53 to direct traffic to the instance running the application.
- C. Alter the application code to inspect a custom header. Alter the client code to pass the IP address in the custom header.
- D. Remove the application from the ALB. Create a Classic Load Balancer in its place. Direct traffic to the application using the HTTP protocol.

Answer: A

NEW QUESTION # 141

A user is accessing an EC2 instance on the SSH port for IP 10.20.30.40. Which one is a secure way to configure that the instance can be accessed only from this IP?

- A. In the security group, open port 22 for IP 10.20.30.40
- **B. In the security group, open port 22 for IP 10.20.30.40/32**
- C. In the security group, open port 22 for IP 10.20.30.40/0
- D. In the security group, open port 22 for IP 10.20.30.40/24

Answer: B

Explanation:

In AWS EC2, while configuring a security group, the user needs to specify the IP address in CIDR notation. The CIDR IP range 10.20.30.40/32 says it is for a single IP 10.20.30.40. If the user specifies the IP as 10.20.30.40 only, the security group will not accept and ask it in a CIRD format.

NEW QUESTION # 142

A developer is managing an application that uploads user files to an Amazon S3 bucket named companybucket. The company wants to maintain copies of all the files uploaded by users for compliance purposes, while ensuring users still have access to the data through the application.

Which IAM permissions should be applied to users to ensure they can create but not remove files from the bucket?

□

- **A. Text Description automatically generated**
- B. Text Description automatically generated
- C. Text, letter Description automatically generated
-
-
- D. □

Answer: A

Explanation:

Explanation

To accomplish: "can create but not remove files"

-- Need: "Put Object"

-- Don't need: "Delete Object"

NEW QUESTION # 143

An application deployed on AWS Elastic Beanstalk experiences increased error rates during deployments of new application versions, resulting in service degradation for users. The Development team believes that this is because of the reduction in capacity during the deployment steps. The team would like to change the deployment policy configuration of the environment to an option that maintains full capacity during deployment while using the existing instances.

Which deployment policy will meet these requirements while using the existing instances?

- **A. Rolling with additional batch**
- B. All at once
- C. Immutable
- D. Rolling

Answer: A

Explanation:

<https://docs.aws.amazon.com/elasticbeanstalk/latest/dg/using-features.rolling-version-deploy.html>

NEW QUESTION # 144

A Developer is writing a Linux-based application to run on AWS Elastic Beanstalk. Application requirements state that the application must maintain full capacity during updates while minimizing cost.

Which type of Elastic Beanstalk deployment policy should the Developer specify for the environment?

- A. Rolling with additional batch
- B. Immutable
- C. Rolling
- D. All at Once

Answer: A

Explanation:

Explanation
