TAE Pv1 questions by taking out their prints or can access them on their smartphones, tablets, and laptops. The PDF form can be used anywhere anytime and is essential for applicants who like to learn from their smart devices. The second form is UiPath Test Automation Engineer Professional v1.0 (UiPath-TAE Pv1) web-based practice test which can be taken from browsers.

UiPath Test Automation Engineer Professional v1.0 Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following descriptions matches the concept of Integration Testing?

- A. Individual units are combined and tested as a group. The purpose of this level of testing is to expose faults in the interaction between integrated units.
- B. Validates the complete and fully integrated system. The purpose of a system test is to evaluate the end-to-end system specifications.
- C. Individual units of a system are tested. The purpose is to validate that each unit of the system code performs as expected.
- D. Evaluate the system's compliance with the business requirements and assess whether it is acceptable for delivery.

Answer: A

Explanation:

Integration Testing focuses on testing combined units of a system to ensure they work together correctly. The goal is to detect issues in the interaction between modules or components after they are integrated.

NEW QUESTION # 60

What is the difference between RPA testing and application testing?

- A. RPA testing and application testing are the same thing, the term used simply depends on the specific software involved.
- B. RPA testing involves checking the quality of robotic processes, whereas application testing checks the functionality of software applications.
- C. RPA testing evaluates human interactions with software, while application testing checks robotic processes.
- D. RPA testing checks the functionality of a software application, but application testing evaluates the performance of robots.

Answer: B

Explanation:

The key difference is that RPA testing focuses on verifying the quality and correctness of robotic processes (automations), while application testing verifies the functionality of the underlying software applications being automated.

NEW QUESTION # 61

According to best practices, what is an acceptable way of validating an application's state before proceeding with certain steps in a process during testing?

- A. Avoid waiting for the desired application state and directly proceed with other interactions.
- B. Consider applying validation measures which include using extra activities that wait for the desired application state before other interactions.
- C. Validate an application's state by implementing hardcoded delays before proceeding with other interactions.
- D. Use as many hardcoded delays as needed to ensure the application has reached the desired state before proceeding with other interactions.

Answer: B

Explanation:

According to best practices, it is important to apply validation measures such as using activities that wait for the desired application state to be reached before proceeding with other interactions. This ensures stability and reduces the risk of errors, as waiting for a specific condition or state before continuing ensures that the application is ready for the next action.

NEW QUESTION # 62

What is the main purpose of conducting Regression Testing in application development?

- A. Regression Testing is conducted to ensure that changes in the code have not affected existing functionalities.
- B. Regression Testing is conducted to ensure the application's performance under high load conditions.
- C. Regression Testing is conducted to ensure the application's compatibility with different environments.
- D. Regression Testing is conducted to validate whether the software application is secure from threats.

Answer: A

Explanation:

The main purpose of Regression Testing is to ensure that recent changes or additions to the code have not negatively impacted existing functionality. It helps maintain application stability after updates.

NEW QUESTION # 63

What happens once a Test Set execution starts in Test Manager?

- A. A Test Case log is created for each executed Test Case, and an empty test result entry is added to an unnamed test execution container.
- B. An empty test result, called a Test Case log, is created, but no test execution container is formed.
- C. A test execution container is created without a name, and an empty test result entry, called a test case log, is added for each Test Case.
- D. A test execution container with the same name as the Test Set is created, and for each Test Case, an empty test result entry, called a test case log, is added.

Answer: D

Explanation:

Once a Test Set execution starts in UiPath Test Manager, a test execution container with the same name as the Test Set is created. Additionally, for each Test Case in the Test Set, an empty test result entry, called a test case log, is added. This structure helps track the execution results for each individual test case under the overall test set.

NEW QUESTION # 64
