100% Pass Quiz Huawei - H19-401_V2.0 - HCSP-Presales-Campus Network Planning and Design V2.0 –High Pass-Rate Reliable Exam Testking

Our H19-401_V2.0 vce braindumps are the best preparation materials for the certification exam and the guarantee of clearing exam quickly with less effort. You can find latest H19-401_V2.0 test answers and questions in our pass guide and the detailed

explanations will help you understand the content easier. Our experts check the updating of H19-401_V2.0 free demo to ensure the accuracy of our dumps and create the pass guide based on the latest information.

Huawei HCSP-Presales-Campus Network Planning and Design V2.0 Sample Questions (Q40-Q45):

NEW QUESTION # 40

What is the maximum number of APs that can be managed by the built-in WAC of the AR5710-S8T1XWE?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The NetEngine AR5710-S8T1XWE is a high-performance converged gateway designed for small and medium branches. According to the technical specifications for the AR5710-S series, the built-in WAC (Wireless Access Controller) capability allows for the management of up to 64 APs (with an initial free license for 32 APs). This hyper-converged design allows a single device to handle routing, switching, security, and wireless management, which is a key recommendation for "Simplified Branch" scenarios in the V2.0 guide.

NEW QUESTION # 41

Which of the following user access authentication modes are supported?

- A. Portal authentication
- B. OSPF authentication
- C. 802.1X authentication
- D. MAC address authentication

Answer: A,C,D

Explanation:

Huawei's Xinghe Intelligent Campus defines three standard "Access Authentication" modes for users and terminals:

* 802.1X (B): High security, suitable for PCs and mobile devices with clients.

* Portal (C): Common for guest access and public areas (web-based login).

* MAC Address Authentication (A): Used primarily for "dumb" terminals like printers, cameras, and IoT devices that cannot perform 802.1X/Portal logins.

OSPF Authentication (D) is a protocol-level security feature used to secure routing updates between routers, not an access authentication method for end-user devices.

NEW QUESTION # 42

An AP cannot work independently. Instead, it must be configured by a WAC or iMaster NCE-Campus.

- A. False
- B. True

Answer: A

Explanation:

In Huawei's WLAN solution, APs can operate in different modes. While Fit APs require a Wireless Access Controller (WAC) and Cloud APs are managed by iMaster NCE-Campus, Huawei also supports Fat APs. A Fat AP (standalone mode) can perform authentication, encryption, and data forwarding independently without a centralized controller. Therefore, the statement that an AP cannot work independently is false. In the Xinghe Intelligent Campus solution, most deployments use Cloud or Fit modes for centralized management, but the hardware capability for standalone operation remains.

NEW QUESTION # 43

Which of the following views is not one of the three views of iMaster NCE-CampusInsight?

- A. User experience view
- B. Application experience view
- C. Terminal health view
- D. Network health view

Answer: C

Explanation:

The iMaster NCE-CampusInsight platform is built around the "Experience-Centric" O & M philosophy, which is categorized into three primary views :

- * Network Health View (B): Monitors the overall stability and performance of switches and APs.
- * User Experience View (C): Tracks individual user journeys (connection, authentication, roaming).
- * Application Experience View (A): Analyzes the quality of specific services like video conferencing or ERP.

While terminal information is available, a "Terminal health view" is not considered one of the three core architectural pillars of the CampusInsight dashboard.

NEW QUESTION # 44

On Huawei iMaster NCE-Campus, key users can be set as VIP users. Which of the following statements are true about VIP users?

- A. The system generates an alarm when detecting poor VIP user experience.
- B. When VIP users are offline, the bandwidth resources reserved for them can be used by other users.
- C. The wireless AP reserves some bandwidth for VIP users.
- D. In terms of high-density wireless access in conference rooms, the host can be set as a VIP user to receive always-assured wireless experience.

Answer: A,B,C,D

Explanation:

The VIP Experience Assurance feature in iMaster NCE-Campus is designed for critical stakeholders. It provides Priority Scheduling and Bandwidth Reservation (C) at the air interface. If a VIP user's experience drops below a threshold, CampusInsight generates a high-priority alarm for immediate troubleshooting (B).

To ensure efficiency, the reserved bandwidth is not wasted; if no VIP users are active, the bandwidth is dynamically released to other users (D). This is a core part of the "Experience-Centric" O & M strategy in V2.
