The practice tests have been made according to the latest pattern so you can practice in real B2B Commerce for Developers Accredited Professional (AP-202) exam environment and improve yourself daily.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q86-Q91):

NEW QUESTION # 86
A developer needs to create a scheduled job in another system to move data into the B2B Commerce org. How can the developer do this without additional third party tools?

- A. Set up WebDAV with SFTP as a waystation, drop the files there using the off-platform job and schedule a job in-platform to process the file
- B. Set up an SFTP server as a waystation, drop the files there using the off-platform job and schedule a job in-platform to process the file
- C. Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data
- D. Create a job in the org (on-platform) to drop a file of existing data, Use the off-platform machine to generate a file and identify the details between the two, Push the changes to the org's "Import"

Answer: B

Explanation:
Option B is the correct answer because it describes a way to create a scheduled job in another system to move data into the B2B Commerce org without additional third party tools. The developer can set up an SFTP server as a waystation, drop the files there using the off-platform job and schedule a job in-platform to process the file. This way, the developer can use the built-in integration capabilities of the B2B Commerce platform, such as the Windows Integration Service (WIS) or the Integration Job Definitions, to import the data from the SFTP server into the org. The other options are incorrect because they either require additional third party tools, such as WebDAV or CLI, or they do not create a scheduled job in another system, but rather in the same org.Creating and editing integration jobs,Create a B2B Commerce Org and Checkout Flow,B2B Commerce on Lightning Experience Developer Guide,B2B Commerce and D2C Commerce Developer Guide

NEW QUESTION # 87
Which two statement are true for Mass Order (2 answers)

- A. The variation product is leveraged for SKUs.
- B. Mass order works with thedefault wishlists
- C. Mass Order is mobile ready with the ccrz templates.
- D. Mass Order pricing is done via a batch job.

Answer: A,D

Explanation:
Mass Order pricing is done via a batch job, which means that the prices are not calculated in real time, but rather at a scheduled time. Mass order works with the variation product, which is a product that has multiple SKUs with different attributes, such as size or color. Mass order does not work with the default wishlists, which are used to store products that the customer wants to buy later. Mass order is not mobile ready with the ccrz templates, which are the default templates for the storefront pages. Salesforce B2B Commerce Developer Guide: Mass Order,B2B Commerce Developer Guide: Variation Products

NEW QUESTION # 88
Which two scoped modules should a developer import in Lightning web components to check user permissions?

- A. @salesforce/permission
- B. @salesforce/hasPermission
- C. @salesforce/userPermission
- D. @salesforce/customPermission

Answer: A,D

Explanation:
To check user permissions in Lightning web components, a developer should import two scoped modules: @salesforce/permission and @salesforce/customPermission. The @salesforce/permission module allows the developer to check if the user has access to a standard permission, such as View Setup or Modify All Data. The @salesforce/customPermission module allows the developer to

check if the user has access to a custom permission, such as Enable Debug Mode or Manage Orders. The other modules do not exist or are not related to user permissions. Salesforce Lightning Web Components Developer Guide: Check User Permissions, Lightning Web Components Developer Guide: Import Salesforce Modules

NEW QUESTION # 89

A user wants the pricing to reflect the price values stored in an external ERP during the checkout flow. In what way can this requirement be satisfied?

- A. Override the computePricingCart method in ccrz.cc_api_PriceAdjustment and make the callout in this method.
- B. Override the computePricingReview method in ccrz.cc_CartExtension and make the callout in this method.
- C. Override the computePricingCart methos in ccrz.cc_api_CartExtension and make the callout in this method.
- D. None of the above

Answer: C

Explanation:
To reflect the price values stored in an external ERP during the checkout flow, the requirement can be satisfied by overriding the computePricingCart method in ccrz.cc_api_CartExtension and making the callout in this method. This method is responsible for computing the pricing for the cart and its line items. By overriding this method, the user can make a callout to the external ERP and update the pricing information accordingly. Salesforce B2B Commerce and D2C Commerce Developer Guide,Logic Classes,ccLogicCart Class

NEW QUESTION # 90

Which code statement should a developer use to import the ID of the current Lightning Experience

- A. import id from '@salesforce/network/ld'
- B. import id from '@salesforce/community/ld'
- C. import id from '@salesforce/experience/ld'
- D. import id from '@salesforce/site/ld'

Answer: B

Explanation:
To import the ID of the current Lightning Experience community, a developer should use the following code statement:
import id from '@salesforce/community/Id';
The @salesforce/community module allows the developer to access information about the current community, such as its ID, name, URL, and base path. The other modules do not exist or are not related to the community ID. The @salesforce/network module is used to access information about the current network, such as its ID and name. The @salesforce/experience module is used to access information about the current user experience, such as whether it is standard or custom. The @salesforce/site module is used to access information about the current site, such as its name and prefix.
