

Oracle 1Z0-771 Actual Exam | 1Z0-771 Reliable Braindumps Files

What's more, part of that Test4Sure 1Z0-771 dumps now are free: <https://drive.google.com/open?id=1xvSYt4mZAgx4xSENifXWACZyhNldBd2>

Although there are other online Oracle 1Z0-771 exam training resources on the market, but the Test4Sure's Oracle 1Z0-771 exam training materials are the best. Because we will be updated regularly, and it's sure that we can always provide accurate Oracle 1Z0-771 Exam Training materials to you. In addition, Test4Sure's Oracle 1Z0-771 exam training materials provide a year of free updates, so that you will always get the latest Oracle 1Z0-771 exam training materials.

To some extent, to pass the 1Z0-771 exam means that you can get a good job. The 1Z0-771 exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our 1Z0-771 Test Prep is compiled elaborately and will help the client a lot. To get a better and full understanding of our 1Z0-771 quiz torrent, please read the introduction of the features and the advantages of our product as follow.

Hot 1Z0-771 Actual Exam | Reliable 1Z0-771: Oracle APEX Cloud Developer Professional 100% Pass

To lead a respectable life, our specialists made a rigorously study of professional knowledge about this 1Z0-771 exam. So do not splurge time on searching for the perfect practice materials, because our 1Z0-771 training materials are the best for you. We can assure you the proficiency of our 1Z0-771 Exam Prep. So this is a definitive choice, it means our 1Z0-771 practice quiz will help you reap the fruit of success.

Oracle APEX Cloud Developer Professional Sample Questions (Q37-Q42):

NEW QUESTION # 37

Which Process type do you use to run multiple processes in the background in APEX?

- A. Execute Code
- B. Execute JavaScript Code
- C. Execute Server-side Code
- D. Execution Chain

Answer: D

Explanation:

To run multiple processes in the background:

D . Execution Chain: This process type allows chaining multiple processes (e.g., PL/SQL, REST calls) to execute sequentially or conditionally in the background, managed via the Process Chain framework. It's ideal for complex, asynchronous tasks (e.g., batch updates).

A . Execute Code: Not a process type in APEX; likely a misnomer.

B . Execute Server-side Code: Runs a single PL/SQL block synchronously, not multiple background tasks.

C . Execute JavaScript Code: Client-side, not suited for background server processes.

Use case: Chain processes like data validation, logging, and email sending without blocking the UI.

NEW QUESTION # 38

Which two statements are true about creating and managing an APEX Workspace?

- A. New schemas cannot be created during workspace creation.
- B. A workspace can be associated with only one schema.
- C. During workspace creation, you can associate the workspace with an existing database schema.
- D. You can create only two workspaces in an APEX Service (APEX Application Development) instance.

Answer: A,C

Explanation:

APEX Workspaces define development environments tied to database schemas:

A . During workspace creation, you can associate the workspace with an existing database schema: In the Workspace creation wizard (via Instance Administration), you select an existing schema (e.g., "HR") to link, enabling access to its objects. This is a standard step, ensuring immediate usability.

B . New schemas cannot be created during workspace creation: APEX doesn't provide a UI to create schemas here; schemas must pre-exist in the database, created via SQL (e.g., CREATE USER).

C . A workspace can be associated with only one schema: False; a workspace can associate with multiple schemas post-creation via "Manage Workspace to Schema Assignments." D . You can create only two workspaces: False; the limit depends on the APEX instance configuration (e.g., cloud service tier), not a fixed number like two.

Use case: Associating existing schemas is key for leveraging pre-built databases.

NEW QUESTION # 39

The Movies faceted search report is filtered only when the Apply button for a selected facet is clicked. What must be done in the Page Designer so that report filtering is automatically executed when any facet value is selected?

- A. Navigate to the faceted search region Attributes, and turn off the Show Facet Name attribute.
- B. Navigate to each facet and then in the Property Editor, turn on Client-Side Filtering.
- C. Navigate to the faceted search region Attributes, and disable the Batch Facet Changes attribute.

Answer: C

Explanation:

By default, faceted search can "batch" changes, requiring an "Apply" button click to filter the report. To enable automatic filtering: Disable the Batch Facet Changes attribute: In Page Designer, under the Faceted Search region's Attributes, setting "Batch Facet Changes" to "No" ensures the report refreshes immediately when a facet value is selected, improving responsiveness. This triggers an AJAX call to update the report without a manual submit.

Show Facet Name: This controls facet label visibility, unrelated to filtering behavior.

Client-Side Filtering: This applies to Interactive Reports/Grids, not faceted search regions, and isn't the correct solution here.

This adjustment enhances the user experience by providing instant feedback.

NEW QUESTION # 40

Which two Query Source types can be used to create a dynamic LOV?

- A. Select List
- B. SQL Query
- C. Function Returning SQL Query
- D. Procedure

Answer: B,C

Explanation:

A dynamic List of Values (LOV) in APEX populates options based on a query source. The supported types include:

Function Returning SQL Query: A PL/SQL function that returns a SQL query string (e.g., RETURN 'SELECT ename, empno FROM emp';). This offers flexibility for dynamic conditions or complex logic.

SQL Query: A direct SQL statement (e.g., SELECT ename, empno FROM emp) executed at runtime to fetch LOV values. It's the simplest and most common approach.

Procedure: Procedures execute logic but don't return query results in the format required for an LOV (they don't produce a result set directly).

Select List: This is a UI component, not a query source type for defining an LOV.

Dynamic LOVs enhance user interaction by providing real-time, data-driven options, critical for forms and filters.

NEW QUESTION # 41

Which two statements are true about faceted search pages?

- A. Facets map to specific database columns.
- B. Multiple charts are not visible in the same region.
- C. A facet's chart can be seen only in a nonmodal dialog.
- D. Faceted Search supports the ability to filter columns storing multiple values.

Answer: A,D

Explanation:

Faceted search pages in APEX provide dynamic filtering. The true statements are:

Faceted Search supports the ability to filter columns storing multiple values: Facets can handle multi-value columns (e.g., comma-separated lists or JSON arrays) using appropriate SQL (e.g., INSTR or JSON_TABLE), enabling complex filtering scenarios like tags or categories.

Facets map to specific database columns: Each facet is tied to a column in the underlying query (e.g., DEPTNO or JOB), ensuring data-driven filtering.

Multiple charts are not visible in the same region: False; multiple facets can display charts within the same region, depending on settings.

A facet's chart can be seen only in a nonmodal dialog: False; charts can appear inline or in dialogs, configurable via facet attributes. This functionality makes faceted search ideal for exploratory data analysis.

NEW QUESTION # 42

.....

Some sites provide Oracle 1Z0-771 Exam study materials on the Internet, but they do not have any reliable guarantee. Let me be clear here a core value problem of Test4Sure. All Oracle exams are very important. In this era of rapid development of information technology, Test4Sure just questions provided by one of them. Why do most people choose Test4Sure? This is because the exam information provided by Test4Sure will certainly be able to help you pass the exam. Why? Because it provides the most up-to-date information, which is the majority of candidates proved by practice.
