### Exam Talend Talend-Core-Developer Revision Plan | Talend-Core-Developer Latest Study Materials

There are some education platforms in the market for college students or just for the use of office workers, which limits the user groups of our Talend-Core-Developer study guide to a certain extent. And we have the difference compared with the other Talend-Core-Developer Quiz materials for our study materials have different learning segments for different audiences. We have three

different versions of our Talend-Core-Developer exam questions on the formats: the PDF, the Software and the APP online.

## Talend Core Certified Developer Exam Sample Questions (Q18-Q23):

### NEW QUESTION # 18

You have two branches: Branch1 contains Job1, and Branch 2 contains Job 2. You want to copy Job1 to Branch 2 and preserve the change history when connecting Studio to Talend Administrator Center.

Which method should you use to preserve the change history?

- A. Switch to branch 1, copy the Branch 1 Job, switch to Branch 2, and paste the Job into Branch 2.
- B. Switch to Branch 1, copy Job 1, switch to Branch 2, and paste Job 1 over Job 2.
- C. Switch to Branch 1, copy the Branch 1 job, switch to Branch 2, and paste the job into Branch 2.
- **D. Switch to Branch 1, right-click Job 1, select Copy to branch, and select Branch 2.**

**Answer: D**

Explanation:

To copy Job1 from Branch1 to Branch2 and preserve the change history when connecting Studio to Talend Administration Center, you need to use the Copy to branch option. This option allows you to copy a job or a folder from one branch to another branch in the same project without losing the version history. You can access this option by switching to Branch1, right-clicking on Job1 in the Repository tree view, and selecting Copy to branch. This will open a dialog box where you can select Branch2 as the target branch and confirm the copy operation.

You do not need to use the import items, create standard job, or paste over options. These options are not used to copy jobs between branches and preserve the change history. The import items option is used to import items (such as jobs, metadata, routines, etc.) from an archive file that can be exported from another project or workspace. The create standard job option is used to create a new job with a name and a description. The paste over option is used to overwrite an existing job with another job that has been copied or cut from the same or another project. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Copy to branch - 7.3]

### NEW QUESTION # 19

You are building a Job to run outside Talend Studio that must run on both Linux and Windows.

Which action should you take when building the Job?

- A. Select Build Job because Jobs are runnable on all platforms
- B. Build one package for each platform
- **C. Specify All for the Shell launcher option in the Build Job windows.**
- D. Configure the Job properties building the Job.

**Answer: C**

Explanation:

To build a job to run outside Talend Studio that must run on both Linux and Windows, you need to select Build Job because jobs are runnable on all platforms. The Build Job option allows you to export your job as an executable file that can be run independently from Talend Studio on any platform that supports Java. You can access this option by right-clicking on your job in the Repository tree view and selecting Build Job. This will open a dialog box where you can configure the build settings, such as destination folder, archive name, context, etc.

You do not need to specify All for the Shell launcher option in the Build Job window, configure the job properties before building the job, or build one package for each platform. These methods are not necessary or available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio:

Open-source ETL and Free Data Integration | Talend, [Build Job - 7.3]

### NEW QUESTION # 20

Where do you access the option to create a Joblet from an existing Job?

- A. Selecting the File menu.
- **B. Selecting the desired components and right-clicking.**
- C. Adding a Joblet component to the Designer.
- D. Right-clicking the Job in the Repository

**Answer: B**

Explanation:

To create a Joblet from an existing Job, you can follow these steps:

- \* Open the Job that you want to create a Joblet from.
- \* Select the components that you want to include in the Joblet.
- \* Right-click on the selected components and select Create Joblet from the context menu.
- \* In the Create Joblet dialog box, enter a name and description for the Joblet.
- \* Click Finish to create the Joblet.

#### NEW QUESTION # 21

Which method allows you to execute the compiled Job Talend Studio?

- A. Right-click the Job in the Repository and select Export items.
- B. Select Save As on the main File menu
- C. Click the Export button in the Edit Properties window.
- **D. Right-click the Job in the Repository and select Build Job**

**Answer: D**

Explanation:

To execute the compiled job outside Talend Studio, you need to right-click on the job in the Repository tree view and select Build Job option. This option allows you to export your job as an executable file that can be run independently from Talend Studio on any platform that supports Java. You can access this option by right-clicking on your job in the Repository tree view and selecting Build Job. This will open a dialog box where you can configure the build settings, such as destination folder, archive name, context, etc. You do not need to click the Export button in the Edit Properties window, right-click on the job in the Repository and select Export items, or select Save As on the main File menu. These options are not used to execute the compiled job outside Talend Studio. The Export button in the Edit Properties window is used to export your job properties as an XML file. The Export items option is used to export your items (such as jobs, metadata, routines, etc.) as an archive file that can be imported into another project or workspace. The Save As option is used to save a copy of your job with a different name or location. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Build Job - 7.3]

#### NEW QUESTION # 22

What is the default port for the REST Endpoint when using tRESTRRequest in Talend Studio?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation:

The default REST endpoint port for tRESTRRequest in Talend Studio is 8090.

\* Port 8090 (Correct Answer - Option D):

\* When running a REST service inside Talend Studio, the default listening port is 8090.

\* This can be changed in the component settings if required.

\* Other port options explained:

\* 5040 & 5070: Not default ports used for Talend REST services.

\* 8040: Used in Talend Runtime, not in Studio.
