

Actual HPE7-J01 Test Answers & Testking HPE7-J01 Learning Materials

1

Asvab Arithmetic Reasoning Actual Practice Test 2025 update|comprehensive questions and verified answers (complete solutions) ASSURED SUCCESS|GRADE A+!!

If a car is towed 12 miles to the repair shop and the tow charge is \$3.50 per mile, how much does the tow cost?

- (a) \$12.00
- (b) \$3.50
- (c) \$42.00
- (d) \$100.00 - ..(ANSWER)...C. Multiply 12 miles by \$3.50 per mile:
 $12 \times \$3.50 = \42.00

The sum of two numbers is 70. One number is 8 more than the other. What's the smaller number?

- (a) 31
- (b) 33
- (c) 35
- (d) 36 - ..(ANSWER)...A. $x + x + 8 = 70$, solve for x.
 $x = 31$

A sales manager buys antacid in bottles the gross. If he goes through 3 bottles antacid everyday, how long will the gross last?

- (a) 144 days

P.S. Free & New HPE7-J01 dumps are available on Google Drive shared by Real4Prep: <https://drive.google.com/open?id=1kHh5bIMVwviyTUJetkx2l9jvBmFAAUDy>

With HPE7-J01 test training materials of Real4Prep, you can put away with disorder emotion and clean up them. HPE7-J01 test training materials of Real4Prep are the most accurate training materials in the current market. Using it, the passing rate of HPE7-J01 Exam is 100%. Choose Real4Prep is equal to choose success.

Using the HPE7-J01 Study Materials, you will find that you can grasp the knowledge what you need in the exam in a short time. Because users only need to spend little hours on the HPE7-J01 study materials, our learning materials will help users to learn all the difficulties of the test site, to help users pass the qualifying examination and obtain the qualification certificate. If you think that time is important to you, try our learning materials and it will save you a lot of time.

2026 High Hit-Rate HP Actual HPE7-J01 Test Answers

We guarantee you that our top-rated HP HPE7-J01 practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) certification exam on the very first go. The authority of Real4Prep in HPE7-J01 Exam Questions rests on its being high-quality and prepared according to the

latest pattern.

HP Advanced HPE Storage Architect Solutions Written Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

A customer wants to implement HPE Cloud Bank Storage with the detach option LTU feature. Which statement is correct regarding the implementation of this feature?

- A. HPE Services is always required when reconnecting a detached datastore.
- B. Support for reading and writing to the detached datastore is supported with the detach license installed.
- **C. HPE Cloud Bank Store must be connected using the connect (read-write) option.**
- D. A detached Cloud Bank datastore can only be reconnected to the HPE StoreOnce system from which it was detached.

Answer: C

Explanation:

HPE Cloud Bank Storage is an extension of HPE StoreOnce Catalyst that enables the movement of deduplicated data to public, private, or hybrid cloud object storage. The Cloud Bank Detach feature is a critical lifecycle management capability designed for long-term retention and disaster recovery scenarios.

According to the HPE StoreOnce User Guide, the "Detach" operation is a specific administrative action that essentially "unplugs" the Catalyst store from the local StoreOnce appliance while leaving the data intact in the cloud bucket (e.g., AWS S3 or Azure Blob). For an administrator to initiate the detach process, the Cloud Bank store must currently be in a Read-Write (RW) state on the StoreOnce system. If a store is currently connected as Read-Only (often the case after a disaster recovery sync), it cannot be detached until it is promoted or was originally connected in a Read-Write capacity.

Once the detach operation is executed using the required Detach Capacity LTU (License to Use), the store enters a "Detached" state. In this state, the data in the cloud becomes immutable and the store is removed from the local StoreOnce system's active management. It is important to note that once detached, the store can only be reconnected to a StoreOnce system (either the original or a new one for DR) in a Read-Only state for recovery purposes. Statement D is incorrect because you cannot write to a detached store. Statement B is incorrect because one of the primary value propositions of Cloud Bank is portability-allowing you to connect a detached store to a completely different StoreOnce appliance in a different region for recovery.

Finally, while HPE Services are available for complex DR planning, they are not a technical requirement for the software-defined reconnection of a detached store.

NEW QUESTION # 42

A customer wants to implement an HPE Morpheus life-cycle management solution at a single site with 1004 VMs using a redundant architecture and distributed services. Which statement is correct regarding the setup and operation of this solution?

- A. Upgrades require a minimal amount of downtime when updating to a newer version of Morpheus.
- B. The RabbitMQ load balancer is a required component of the installation.
- C. It is a simple installation and configuration, wherein Morpheus installs and configures all required services.
- **D. The solution requires a minimum of six VMs, but it is recommended to have a minimum of 10 VMs.**

Answer: D

Explanation:

When designing an HPE Morpheus environment for an enterprise-scale workload (such as 1,000+ VMs), a standalone "all-in-one" installation is insufficient for high availability (HA) and performance requirements.

Instead, a 3-node Distributed Architecture must be implemented to ensure redundancy across all critical service layers.

In a distributed, redundant Morpheus setup, the architecture is broken down into three primary tiers: the Application tier, the Database tier (MySQL/Percona), and the Messaging/Search tier (Elasticsearch and RabbitMQ). To achieve a basic redundant footprint, you require at least two Morpheus application nodes, three database nodes (for quorum), and a messaging cluster.

According to the HPE Morpheus Architecture and Sizing Guide, a standard HA deployment starts with a minimum of six VMs to separate these functions.

However, for a production environment of this size, it is recommended to have a minimum of 10 VMs. This expanded footprint typically includes 3 App nodes, 3 Database nodes, and a 3-node cluster for Elasticsearch

/RabbitMQ, plus a dedicated load balancer or management node, ensuring that the loss of any single host does not impact the management plane's availability.

Option C is incorrect because a distributed installation is significantly more complex than the "all-in-one" appliance approach and requires manual configuration of externalized services. Option B is slightly inaccurate because while RabbitMQ itself is required, a

dedicated "RabbitMQ load balancer" is often handled by the primary application load balancer (like an F5 or NetScaler) rather than being a specific required installation component. Option D is incorrect as upgrades in a distributed environment involve a coordinated, multi-step process across all nodes, which typically requires a scheduled maintenance window rather than "minimal" downtime.

NEW QUESTION # 43

A customer needs to replace its HPE Alletra 6000 storage array with either an HPE Alletra 9000 managed with GreenLake or an IBM FlashSystem solution. Which two advantages should an HPE Partner share with the customer as to why the customer should opt for the HPE storage solution? (Choose two.)

- A. AIOps for infrastructure
- B. Granular disaster recovery
- C. Full stack automation with hybrid cloud
- D. Ransomware detection
- E. Fractional scaling

Answer: A,C

Explanation:

When competing against IBM FlashSystem, HPE's primary differentiators lie in the intelligence of the management platform and the integration into the broader hybrid cloud ecosystem.

The first major advantage is AIOps for infrastructure, pioneered by HPE InfoSight. While IBM has Storage Insights, HPE InfoSight is widely considered the industry benchmark for deep-stack predictive analytics. It uses machine learning to analyze millions of sensor points across the global install base to predict and prevent up to 86% of problems before they occur. This goes beyond simple storage monitoring; it provides visibility into the "noisy neighbor" VMs and host-side issues that impact storage performance, providing a level of autonomous management that IBM's portfolio currently lacks.

The second advantage is Full stack automation with hybrid cloud. By managing the Alletra 9000 through the HPE GreenLake Data Services Cloud Console (DSCC), the customer transitions from managing a "box" to a cloud-native operational model. This provides a unified API and a consistent management experience whether the data is on-premises or in the cloud. DSCC enables "Intent-Based Provisioning," where the user simply specifies the workload type and the cloud console automatically selects the best-suited array and volume parameters, ensuring optimal performance without manual tuning. This "Cloud Ops" model is a cornerstone of the HPE GreenLake strategy, offering a more streamlined, automated experience than the traditional management software typically associated with the IBM FlashSystem line. While IBM does offer ransomware features (Option C), HPE's focus on AIOps and hybrid cloud integration provides a more transformative operational benefit for most enterprise customers.

NEW QUESTION # 44

A customer purchased an HPE GreenLake for File Storage solution and implemented the replication feature. Which statement is correct regarding this feature?

- A. N:1 and 1:N replication is supported, with snapshots taken at the directory level.
- B. Data reduction, including deduplication, is performed between the storage arrays.
- C. Client hardware has read-write access to both the source and destination replication arrays.
- D. Two protected paths configured on the same path can be used to replicate to the same peer.

Answer: A

Explanation:

HPE GreenLake for File Storage is built upon a disaggregated, shared-everything (DASE) architecture powered by VAST Data software. The replication mechanism in this environment is fundamentally different from traditional block-based replication. Instead of replicating entire volumes or LUNs, HPE GreenLake for File Storage performs replication at the directory level.

According to the HPE GreenLake for File Storage Administrator Guide, the system utilizes a snapshot-based asynchronous replication engine. This allows for highly flexible topologies, including N:1 (fan-in) and

1:N (fan-out) configurations, which are essential for modern distributed data environments and centralized backup strategies.

Because the solution is file-based, it leverages "Views" (or shares) that point to specific directory paths. Protection policies and snapshot schedules are applied directly to these paths, ensuring that only the specific datasets required for disaster recovery are replicated.

Option B is a common point of confusion; while the system is inherently "reduction-aware" and uses similarity-based data reduction (deduplication and compression) to save space on the physical media, the replication process itself focuses on the metadata and

unique data blocks associated with the directory-level snapshots. Option A is incorrect because, in an asynchronous replication relationship, the destination is typically Read-Only until a failover or clone operation is initiated. Option D is incorrect as the management of protected paths follows strict pairing rules to prevent configuration conflicts. Thus, the support for flexible fan-in/fan-out topologies and granular directory-level protection (Option C) is the defining characteristic of this enterprise file solution.

NEW QUESTION # 45

A customer currently has a Dell EMC storage array and wants to migrate data to a newly purchased HPE Alletra MP B10000 storage array. Which solution should the administrator use to perform the migration?

- A. Online Import Utility (OIU) over fibre channel (FC)
- B. Remote copy over iSCSI
- C. Peer motion utility (PMU) over fibre channel (FC)
- D. Peer persistence over fibre channel (FC)

Answer: A

Explanation:

Migrating data from a non-HPE (third-party) array to an HPE storage platform requires a specialized toolset designed for interoperability. For the HPE Alletra MP B10000 (Block), the primary tool for migrating from competitive systems like Dell EMC, HDS, or IBM is the HPE Online Import Utility (OIU).

The Online Import Utility is designed to simplify and automate the migration process with minimal disruption to the host applications. Architecturally, OIU leverages the "Peer Motion" technology foundation but is specifically packaged to support "Import" workflows from non-HPE sources. When using OIU over Fibre Channel, the HPE Alletra MP array essentially acts as a "Pass-Through" or proxy. The administrator zones the Dell EMC array to the Alletra MP, and the Alletra MP presents itself as a host to the Dell system.

Once the connection is established, the data is pulled from the source array to the destination array. Because it is an Online utility, the host's I/O is redirected through the Alletra MP during the migration process. This allows the data to be moved in the background while the application remains online. Once the data copy is complete, a "cutover" is performed, and the Dell EMC array can be decommissioned. Option D (Peer Motion Utility) is technically the underlying engine, but "Online Import" is the specific utility name used for multi-vendor migrations. Options B and C are incorrect as Remote Copy and Peer Persistence are proprietary HPE-to-HPE technologies used for ongoing replication and high availability, not for one-time migrations from third-party hardware.

NEW QUESTION # 46

.....

We will have a dedicated specialist to check if our HPE7-J01 learning materials are updated daily. We can guarantee that our HPE7-J01 exam question will keep up with the changes by updating the system, and we will do our best to help our customers obtain the latest information on learning materials to meet their needs. If you choose to purchase our HPE7-J01 quiz torrent, you will have the right to get the update system and the update system is free of charge. We do not charge any additional fees. Once our HPE7-J01 Learning Materials are updated, we will automatically send you the latest information about our HPE7-J01 exam question. We assure you that our company will provide customers with a sustainable update system.
