A generally accepted view on society is only the professionals engaged in professionally work, and so on, only professional in accordance with professional standards of study materials, as our Confluent Certified Administrator for Apache Kafka study questions, to bring more professional quality service for the user. Our study materials can give the user confidence and strongly rely on feeling, lets the user in the reference appendix not alone on the road, because we are to accompany the examinee on CCAAK Exam, candidates need to not only learning content of teaching, but also share his arduous difficult helper, so believe us, we are so professional company.

These features enable you to study real CCAAK questions in PDF anywhere. BraindumpsVCE also updates its questions bank in Confluent Certified Administrator for Apache Kafka (CCAAK) PDF according to updates in the Confluent CCAAK Real Exam syllabus. These offers by BraindumpsVCE save your time and money. Buy Confluent Certified Administrator for Apache Kafka (CCAAK) practice material today.

## Valid Confluent CCAAK Exam Testking & Flexible CCAAK Learning Mode

In this way, the Confluent CCAAK certified professionals can not only validate their skills and knowledge level but also put their careers on the right track. By doing this you can achieve your career objectives. To avail of all these benefits you need to pass the CCAAK Exam which is a difficult exam that demands firm commitment and complete CCAAK exam questions preparation.

## Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate's understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.</li></ul>

## Confluent Certified Administrator for Apache Kafka Sample Questions (Q14-Q19):

### NEW QUESTION # 14

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- A. One
- B. Four
- C. three
- D. two

**Answer: A**

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

### NEW QUESTION # 15

If the Controller detects the failure of a broker that was the leader for some partitions, which actions will be taken? (Choose two.)

- A. The Controller sends the new leader and ISR list changes to all brokers.
- B. The Controller persists the new leader and ISR list to ZooKeeper.
- C. The Controller sends the new leader and ISR list changes to all producers and consumers.
- D. The Controller waits for a new leader to be nominated by ZooKeeper.

**Answer: A,B**

Explanation:

The Controller updates ZooKeeper with the new leader and in-sync replica (ISR) information to maintain metadata consistency. Brokers need this information to correctly route client requests and continue replication.

### NEW QUESTION # 16

Which use cases would benefit most from continuous event stream processing? (Choose three.)

- A. Log monitoring/application fault detection
- B. End-of-day financial settlement processing
- C. Fraud detection
- D. Historical dashboards
- E. Context-aware product recommendations for e-commerce

**Answer: A,C,E**

Explanation:

Real-time analysis of transactions helps detect suspicious activity instantly.

Context-aware product recommendations for e-commerce requires real-time user behavior tracking to serve personalized recommendations.

Log monitoring/application fault detection needs immediate processing to alert on system issues or failures.

### NEW QUESTION # 17

A topic 'recurring payments' is created on a Kafka cluster with three brokers (broker id '0', '1', '2') and nine partitions. The 'min.insync replicas' is set to three, and producer is set with 'acks' as 'all'. Kafka Broker with id '0' is down.

Which statement is correct?

- A. Producers can write messages to all the partitions, because new leaders for the partitions will be elected.
- B. Producers will only be able to write messages to the topic where the Leader for the partition is on Broker id T.
- **C. Producers and consumers will have no impact on six of the nine partitions.**
- D. Consumers can read committed messages from partitions on broker id T, '2\

**Answer: C**

Explanation:

With 9 partitions spread across 3 brokers, each broker typically hosts 3 leaders (assuming even distribution). When Broker 0 fails, the partitions for which it was leader will elect new leaders on brokers 1 or 2 if enough in-sync replicas (ISRs) remain. But since min.insync.replicas=3 and only 2 brokers are up, no partition can meet the minimum in-sync replica requirement, so producers with acks=all will fail to write. However, for partitions where Broker 0 is not the leader, consumers can still read committed messages. Given that only 3 partitions likely had Broker 0 as leader, six partitions remain accessible for reads, but not writes.

### NEW QUESTION # 18

Which technology can be used to perform event stream processing? (Choose two.)

- A. Confluent Schema Registry
- **B. Confluent ksqlDB**
- **C. Apache Kafka Streams**
- D. Confluent Replicator

**Answer: B,C**

Explanation:

Kafka Streams is a client library for building real-time applications that process and analyze data stored in Kafka. ksqlDB enables event stream processing using SQL-like queries, allowing real-time transformation and analysis of Kafka topics.

### NEW QUESTION # 19

.....

The Confluent CCAAK exam questions are the ideal and recommended study material for quick and easiest Confluent Certified Administrator for Apache Kafka (CCAAK) exam dumps preparation. The Confluent Certified Administrator for Apache Kafka (CCAAK) practice questions are designed and verified by qualified and renowned Confluent Certification Exams trainers. They work closely and check all CCAAK Exam Dumps step by step. They also ensure the best possible answer for all CCAAK exam questions and strive hard to maintain the top standard of Confluent Certified Administrator for Apache Kafka (CCAAK) exam dumps all the time.
