Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 2	<ul style="list-style-type: none"> • OmniScripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 3	<ul style="list-style-type: none"> • Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 4	<ul style="list-style-type: none"> • Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.

Users who use our Plat-Dev-210 real questions already have an advantage over those who don't prepare for the exam. Our study materials can let users the most closed to the actual test environment simulation training, let the user valuable practice effectively on Plat-Dev-210 practice guide, thus through the day-to-day practice, for users to develop the confidence to pass the exam. For examination, the power is part of pass the exam but also need the candidate has a strong heart to bear ability, so our Plat-Dev-210 learning dumps through continuous simulation testing, let users less fear when the real test, better play out their usual test levels, can even let them photographed, the final pass exam.

Salesforce Certified Omnistudio Developer Sample Questions (Q65-Q70):

NEW QUESTION # 65

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the data. What error could cause this behavior?

Choose 2 answers

- A. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.
- B. The input JSON paths In the DataRaptor Load do not match the JSON from the OmniScript.
- C. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor
- D. The fields that are not updated are read only in Salesforce.

Answer: B,C

Explanation:

The input JSON paths In the DataRaptor Load must match the JSON from the OmniScript, otherwise the data will not be mapped correctly to the Salesforce fields. ContextId must be spelled correctly in the merge code that passes the RecordId to the DataRaptor, otherwise the DataRaptor will not be able to identify which record to update. The fields that are not updated are not necessarily read only in Salesforce, as they could be editable by other means. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type has no effect on updating data in Salesforce, as it is only used for testing purposes.

NEW QUESTION # 66

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A Data Mapper Load saves the data. What error could cause this behavior?

Choose 2 answers

- A. The fields that are not updated are read-only in Salesforce.
- B. In the Data Mapper Load, in the preview tab, the RecordId is from the wrong record type.
- C. The Input JSON paths in the Data Mapper Load do not match the JSON sent from the OmniScript.
- D. ContextId is misspelled in the merge code that passes the RecordId to the Data Mapper.

Answer: A,C

Explanation:

According to the Salesforce OmniStudio DataRaptor documentation, specifically under DataRaptor Load Best Practices and Common Issues:

* A. "The Input JSON paths in the Data Mapper Load do not match the JSON sent from the OmniScript." This is a common configuration issue. If the paths between the OmniScript's structure and the DataRaptor Load mapping are mismatched, fields may not map correctly, resulting in partial updates or no updates.

* B. "The fields that are not updated are read-only in Salesforce." If a field is Read-Only at the field-level security (FLS) or object schema, DataRaptor Load will not be able to write to it, which explains why only some data is updated.

Incorrect Options:

* C. The RecordId from the wrong record type would typically cause a complete failure, not a partial update.

* D. A misspelled ContextId could prevent data from being linked correctly, but this is less likely to cause partial field-level issues, and more likely to affect record association.

Salesforce OmniStudio Developer Guide # DataRaptor Load # Troubleshooting Salesforce Help Documentation: OmniStudio DataRaptor Best Practices

NEW QUESTION # 67

Which two of these options can a developer use to retrieve data from a Salesforce object?

Choose 2 answers

- A. A DataRaptor Extract Action
- **B. A Lookup Input Element**
- C. A DataRaptor or Post Action
- **D. A DataRaptor Load Action**

Answer: B,D

Explanation:

A DataRaptor Load Action can be used to retrieve data from a Salesforce object by specifying the object name, fields, and filter criteria. A Lookup Input Element can be used to retrieve data from a Salesforce object by allowing the user to search for a record using a lookup field

NEW QUESTION # 68

A developer has a requirement to create a child FlexCard that contains all of its parent FlexCard's records In a Datable How should the developer configure the parent FlexCard's Node?

- **A. {Records}**
- B. {Records Plat-Dev-210}
- C. {Recorded}
- D. {Params, records}

Answer: A

Explanation:

The Node field for the parent FlexCard should be set to {Records}, which is an array of all the records retrieved by the parent FlexCard data source. This will allow the child FlexCard to access the records and display them in a DataTable.

NEW QUESTION # 69

Refer to the exhibit below.

What is the reason that the fields fail to display the fetched data?

- A. The typeHead key is not in the correct format.
- **B. Use Data JSON is Not selected in the properties of the Type Ahead Block.**
- C. FirstName, LastName, and BirthDate are not placed inside the Type Ahead Block.
- D. Lookup Mode is selected in the properties of the Type Ahead Block.

Answer: B

Explanation:

The Use Data JSON property must be selected in the properties of the Type Ahead Block in order to display the fetched data in the fields. The Lookup Mode property is used to specify the type of lookup to perform. The FirstName, LastName, and BirthDate fields can be placed inside or outside the Type Ahead Block. The typeHead key is in the correct format.

NEW QUESTION # 70

.....

With our Plat-Dev-210 practice exam, you only need to spend 20 to 30 hours in preparation since there are all essence contents in our Plat-Dev-210 study materials.
