Salesforce Certification Preparation for Advanced Administrator Sample Questions (Q147-Q152):

NEW QUESTION # 147

AW Computers has created a custom field called Government ID on a custom object. Most users with a custom Sales profile should be unable to access this field. A select group of Sales users called the Institutional Team should be able to access the Government ID field via reports.

How should an administrator accommodate this request?

- A. Make a report with the Government ID field included. Share this report to the Institutional Team in a public reports folder.
- B. Configure a report type with the Government ID field. Assign this report type to the Institutional Team via a permission set.
- C. Mark the field as Read Only on the sales profile. Create a permission set to re-enable reporting for the Institution Team.
- D. Create a permission set with Read access to the field. Assign the permission set to the Institutional Team.

Answer: D

Explanation:

A permission set is a collection of settings and permissions that give users access to various tools and functions in Salesforce. A permission set can be used to extend users' functional access without changing their profiles. You can assign permission sets to individual users or groups of users based on their business needs. In this case, you can create a permission set with Read access to the Government ID field on the custom object and assign it to the Institutional Team users who need access to this field via reports.

NEW QUESTION # 148

An administrator recently Implemented multi-factor authentication (MFA) with a standard security level selectee. They are receiving cases that users are unable to log in.

What should me administrator do to troubleshoot?

- A. Check the session security level required at login on the user profile.
- B. Change MF-A to High Assurance.
- C. Reset the user passwords and ask them to try again.
- D. Temporarily disable MFA.

Answer: A

NEW QUESTION # 149

Ursa Major Solar customer records have a lot of fields and Lightning components to give users a variety of information and available functions. Recently, usrrs have noted that their pages take a long time to load and it's starting to negatively impact their experience.

What should the administrator do to help diagnose where improvements can be made?

- A. Check the debug logs found in the Environment section of Setup.
- B. Click Analyze from the Lightning App Builder toolbar.
- C. Review the debug logs from the Developer Console.
- D. Use the Apex debugger while loading a customer record.

Answer: B

Explanation:

The Analyze feature in the Lightning App Builder toolbar is a tool that helps you optimize the performance of your record pages by providing recommendations and insights on how to improve page load time and user experience. It can help you identify which fields and components are taking the most time to load and suggest ways to reduce their impact. You can also compare your page performance with other pages in your org or with Salesforce best practices. References: https://help.salesforce.com/s/articleView?id=sf.
