## New Professional-Cloud-Database-Engineer Test Blueprint - Exam Professional-Cloud-Database-Engineer Preview

With our professional experts' unremitting efforts on the reform of our Professional-Cloud-Database-Engineer guide materials, we can make sure that you can be focused and well-targeted in the shortest time when you are preparing a Professional-Cloud-Database-Engineer test, simplify complex and ambiguous contents. With the assistance of our Professional-Cloud-Database-

Engineer study torrent you will be more distinctive than your fellow workers, because you will learn to make full use of your fragment time to do something more useful in the same amount of time. All the above services of our Professional-Cloud-Database-Engineer Practice Test can enable your study more time-saving, energy-saving and labor-saving.

## Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q69-Q74):

### NEW QUESTION # 69

You support a consumer inventory application that runs on a multi-region instance of Cloud Spanner. A customer opened a support ticket to complain about slow response times. You notice a Cloud Monitoring alert about high CPU utilization. You want to follow Google-recommended practices to address the CPU performance issue. What should you do first?

- A. Decrease the number of processing units.
- B. Modify the database schema, and add additional indexes.
- C. Increase the number of processing units.
- D. Shard data required by the application into multiple instances.

**Answer: C**

### NEW QUESTION # 70

You are managing two different applications: Order Management and Sales Reporting. Both applications interact with the same Cloud SQL for MySQL database. The Order Management application reads and writes to the database 24/7, but the Sales Reporting application is read-only. Both applications need the latest data.

You need to ensure that the Performance of the Order Management application is not affected by the Sales Reporting application. What should you do?

- A. Queue up all the requested reports in PubSub, and execute the reports at night.
- B. Use a Cloud SQL federated query for the Sales Reporting application.
- C. Create two separate databases in the instance, and perform dual writes from the Order Management application.
- D. Create a read replica for the Sales Reporting application.

**Answer: D**

### NEW QUESTION # 71

You are running a transactional application on Cloud SQL for PostgreSQL in Google Cloud. The database is running in a high availability configuration within one region. You have encountered issues with data and want to restore to the last known pristine version of the database. What should you do?

- A. Create a clone database from a read replica database, and restore the clone into a different zone.
- B. Use the Cloud SQL database import feature. Import last week's dump file from Cloud Storage.
- C. Use the Cloud SQL point-in-time recovery (PITR) feature. Restore the copy from two hours ago to a new database instance.
- D. Create a clone database from a read replica database, and restore the clone in the same region.

**Answer: C**

### NEW QUESTION # 72

You are migrating an on-premises application to Compute Engine and Cloud SQL. The application VMs will live in their own project, separate from the Cloud SQL instances which have their own project. What should you do to configure the networks?

- A. Create a new VPC network in each project, and use VPC Network Peering to connect the two together.
- B. Create a Shared VPC that both the application VMs and Cloud SQL instances will use.
- C. Place both the application VMs and the Cloud SQL instances in the default network of each project.
- D. Use the default networks, and leverage Cloud VPN to connect the two together.

**Answer: B**

Explanation:

[https://groups.google.com/g/google-cloud-sql-discuss/c/M5G5\\_HPXtY?pli=1](https://groups.google.com/g/google-cloud-sql-discuss/c/M5G5_HPXtY?pli=1)

### NEW QUESTION # 73

You are troubleshooting a connection issue with a newly deployed Cloud SQL instance on Google Cloud.

While investigating the Cloud SQL Proxy logs, you see the message Error 403: Access Not Configured. What should you do?

- A. Check the app.yaml value cloud\_sql\_instances for a misspelled or incorrect instance connection name.
- B. Check whether your service account has cloudsql.instances.connect permission.
- **C. Enable the Cloud SQL Admin API.**
- D. Ensure that you are using an external (public) IP address interface.

**Answer: C**

Explanation:

<https://cloud.google.com/sql/docs/mysql/connect-auth-proxy#troubleshooting> C because in docs it says

"Make sure to enable the Cloud SQL Admin API. If it is not, you see output like Error 403: Access Not Configured in your Cloud SQL

### NEW QUESTION # 74

.....
