You are advised to finish all exercises of our ACA-100 preparation questions and pass the exam by the first attempt very easily.

Appian Certified Analyst Sample Questions (Q30-Q35):

NEW QUESTION # 30

What are two benefits of creating future state process models (or process models-to-be)?

- A. They can help identify opportunities where Appian features can bring in automation.
- B. They capture integration definitions, showcasing necessary automation details.
- C. They can capture high-level product vision and goals.
- D. They capture Robotic Process Automation (RPA) intervention specifics from Appian.

Answer: A,C

Explanation:

Creating future state process models (or process models-to-be) has several benefits, including capturing the high-level product vision and identifying areas where Appian's features can introduce automation.

Capturing High-Level Product Vision and Goals (C):

Future state process models help in visualizing the desired end state of a process.

They provide a clear picture of how the process should function once all enhancements and improvements have been implemented.

This clarity aligns stakeholders around a common goal and ensures that development efforts are focused on delivering the desired outcomes.

Identifying Automation Opportunities (D):

By modeling the future state, teams can spot manual tasks and inefficiencies that could be automated using Appian's features like process modeling, smart services, and RPA.

This identification helps in streamlining processes and improving overall efficiency.

Why Not Other Options?:

A . RPA intervention specifics: While important, RPA specifics are typically captured during the detailed design phase rather than in high-level future state process models.

B . Integration definitions: These are technical details that are generally documented separately from high-level process models.

Appian Process Modeling Guide: Future State Process Models

Appian Automation Opportunities Guide: Identifying Automation in Appian Creating future state models helps in visualizing the end goals and identifying where automation can drive the most value, ensuring that the process improvements are aligned with strategic objectives.

NEW QUESTION # 31

Users expressed that only managers should be able to see information related to a business object.

How should you translate this requirement into a user story?

- A. "As a manager, I need to build security options for records."
- B. "As a manager, I must be in the group to see the data."
- C. "As a manager, I need to be able to see a record type and navigate the details."
- D. "Only some of the data are available for managers."

Answer: C

Explanation:

The correct way to translate the requirement into a user story is to focus on the manager's ability to access and navigate the information related to the business object. This user story follows the standard format: "As a [role], I need to [action] so that [benefit]." In this case, the story captures the manager's need to view and interact with specific data.

User Story Format:

Role: Manager

Action: Ability to see and navigate a record type

Benefit: Ensures managers have the necessary access to perform their job duties Why Not Other Options?:

B . Focuses on building security options rather than the manager's need to access data.

C . Is vague and does not follow the standard user story format.

D . Focuses on group membership but is less specific about the action the manager needs to perform.

References:

Appian Documentation on User Stories: Writing User Stories

Using the correct user story format ensures that the development team clearly understands the requirement and how it benefits the end user.

NEW QUESTION # 32

As an Appian Analyst, which activity are you responsible for during the "optimize" phase of a project?

- A. Structure an application support team
- B. Build the deployment pipeline
- C. Measure the impact of application release
- D. Conduct release planning

Answer: C

Explanation:

During the "optimize" phase of an Appian project, the focus is on evaluating and improving the performance and impact of the application after its release. As an Appian Analyst, your role in this phase involves measuring the impact of the application release, which includes gathering and analyzing data on user adoption, performance metrics, and overall business impact. This data-driven approach helps in identifying areas for improvement and optimization to ensure the application continues to meet business objectives effectively. Appian Documentation - Application Lifecycle Management Note: The other options (A, B, C) are typically the responsibilities of other roles in different phases of the project, such as developers or project managers, and not specific to the "optimize" phase for an Appian Analyst.

NEW QUESTION # 33

In Appian, what is the purpose of a process model?

- A. To automate business workflows by defining sequences of tasks
- B. To manage user permissions within the application
- C. To create a database schema
- D. To define the look and feel of the user interface

Answer: A

NEW QUESTION # 34

What is the primary benefit of using Appian's Record Type feature?

- A. It facilitates the display of external data in an integrated manner.
- B. It enables the integration of third-party APIs.
- C. It automates user interface design.
- D. It allows for the creation of static forms.

Answer: A

NEW QUESTION # 35

.....
