Whether you are a project manager, team member, or interested in project management, the PRINCE2 PRINCE2-Agile-Foundation (PRINCE2 Agile Foundation) Exam is a great way to enhance your skills and advance your career.

PRINCE2 Agile Foundation Sample Questions (Q66-Q71):

NEW QUESTION # 66

Which of the following is a benefit of 'being and doing agile'?

- **A. Increasing user satisfaction**
- B. Focusing on completing tasks
- C. Using agile techniques
- D. Following processes

Answer: A

Explanation:

A key benefit of being and doing agile is increasing user satisfaction by delivering value early and continuously, adapting to feedback, and ensuring the product meets real user needs. Agile approaches emphasize collaboration with customers and iterative delivery, which enhances satisfaction compared to traditional, rigid methods.

While following processes (A) and using agile techniques (B) are means to an end, they do not directly guarantee benefits. Focusing solely on tasks (D) risks losing sight of value delivery.

User satisfaction is a central measure of agile success and reflects the effective application of agile principles.

NEW QUESTION # 67

Which workshop enables participants to collaboratively define the Definition of Ready?

- A. Starting up workshop
- B. Project initiation workshop
- C. Project kickoff workshop
- **D. Agile enablement workshop**

Answer: D

Explanation:

The Agile Enablement Workshop provides a collaborative environment where teams and stakeholders define critical agile artifacts, including the Definition of Ready. This definition specifies the criteria a user story or product backlog item must meet before work can begin, ensuring clarity and readiness.

The workshop facilitates alignment on quality standards, scope, and expectations, reducing ambiguity and improving flow through development cycles. By involving all key participants, the Definition of Ready is meaningful and practical, tailored to the project's specific context.

While starting up (A), kickoff (B), and initiation workshops (C) focus on project foundation and planning, they do not specifically focus on agile readiness criteria.

This workshop is essential for embedding agile practices within PRINCE2 governance and fostering effective delivery.

NEW QUESTION # 68

What information is NOT typically displayed on a burn chart?

- A. Effort remaining
- B. Actual amount of work done
- **C. Team working agreements**
- D. Amount of time elapsed

Answer: C

NEW QUESTION # 69

Which of the following is a common challenge when merging project management and Agile?

- A. The use of a flexible framework
- **B. The use of different terminology**
- C. Lack of guidance at project level
- D. Lack of clear processes

Answer: B

Explanation:

A well-recognized challenge when merging traditional project management with Agile approaches is the use of different terminology, making option B the correct answer. Agile Foundation materials highlight that traditional project management and Agile have evolved from different perspectives, each with its own language, concepts, and assumptions. When these approaches are combined within the same organization or project, misunderstandings often arise due to terminology differences rather than fundamental conflicts in intent.

Traditional project management commonly uses terms such as scope, milestones, deliverables, baselines, and change control, while Agile uses concepts like backlog, iterations, increments, velocity, and value delivery. Even when the underlying goals are aligned, different terminology can create confusion among stakeholders, project managers, Agile teams, and senior leadership. This confusion may lead to misaligned expectations, incorrect reporting, or resistance to Agile practices, as people may interpret the same words differently or assume conflicting meanings.

Option A, lack of clear processes, is generally not a common issue because both project management and Agile provide structured approaches, albeit in different forms. Option C, lack of guidance at the project level, is also not accurate, as Agile Foundation guidance increasingly addresses how Agile can operate at team, project, and organizational levels. Option D, the use of a flexible framework, is actually a benefit of Agile rather than a challenge.

Agile Foundation documents emphasize that overcoming terminology differences requires education, shared understanding, and alignment rather than choosing one approach over the other. By establishing a common language, clarifying roles and expectations, and focusing on value delivery rather than labels, organizations can successfully integrate Agile ways of working with project management governance. Addressing terminology differences early helps reduce friction, improves collaboration, and enables a more effective hybrid or Agile-informed project environment.

NEW QUESTION # 70

In which process is a workshop conducted to agree the Definition of Ready (DoR) and Definition of Done (DoD)?

- A. Managing product delivery
- B. Controlling a stage
- C. Directing a project
- **D. Initiating a project**

Answer: D

Explanation:

Agile Foundation guidance, aligned with PRINCE2 Agile, explains that the Definition of Ready (DoR) and Definition of Done (DoD) should be agreed as early as possible to establish clear expectations around quality, readiness, and completion. The workshop to agree both DoR and DoD is conducted during the Initiating a Project process, making option A the correct answer.

The Initiating a Project process is where the foundations for successful delivery are set. Its purpose is to ensure that there is a shared understanding of how the project will be delivered, governed, and controlled before significant work begins. Agreeing the DoR and DoD at this stage provides clarity on what "ready to start" and "done" actually mean for the project. This helps align stakeholders, delivery teams, and governance roles on quality expectations and acceptance standards.

Option B, Directing a Project, focuses on senior-level decision-making, authorization, and overall control rather than detailed delivery agreements. Option C, Controlling a Stage, deals with monitoring progress and handling issues during execution, not defining core quality agreements. Option D, Managing Product Delivery, concentrates on coordinating work between the team and project management but assumes that definitions such as DoR and DoD are already established.

Agile Foundation documents emphasize that DoR and DoD support transparency, consistency, and trust. The DoR ensures that work entering a delivery cycle is sufficiently understood and prepared, reducing waste and rework. The DoD ensures that completed work meets agreed quality criteria and is potentially releasable. Establishing these definitions during Initiating a Project supports Agile principles of built-in quality and shared understanding, while also satisfying governance needs. By agreeing them early, teams can work autonomously within clear boundaries, improving flow, predictability, and value delivery throughout the project.
