Palo Alto Networks XSOAR Engineer Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which content type cannot be managed using remote repositories?

- **A. Lists**
- B. Exclusion List
- C. Jobs
- D. Pre-processing rules

Answer: A

NEW QUESTION # 46

What will happen if a playbook debugger is left running for more than 24 hours?

- A. The session must be stopped during 180 minutes manually by administrator, user will receive notification automatically.
- **B. By default, the system closes automatically any debugger session that have been open 180 minutes.**
- C. The session will be running till stopped manually by administrator.
- D. By default, every 24 hours, the system closes any debugger sessions that have been open for more than 180 minutes.

Answer: B

NEW QUESTION # 47

How is data transferred between playbook tasks?

- A. Input from the indicator page
- **B. Read/Write from context data**
- C. Directly from a previous task
- D. Over war room results

Answer: B

NEW QUESTION # 48

Which action will resolve the issue when an analyst upgrades a content pack from the Marketplace, and the new version has a code error?.

- A. Uninstall and reinstall the content pack.
- B. Upgrade the dependencies of the content pack.
- **C. Revert the content pack to a previous version.**
- D. Export and manually upload the content pack.

Answer: C

Explanation:

The Marketplace section states that administrators can revert any installed content pack to a previous version via the Version History # Revert to this version option.

This is the recommended method when a new release introduces a bug.

Reinstalling the same version does not fix the code error.

NEW QUESTION # 49

Where would you look to find a personalized view of your own incidents and tasks?

- A. My Incidents
- B. My Threat Landscape
- **C. My Dashboard**
- D. Incident Summary View

Answer: C

NEW QUESTION # 50

.....
