Since our company's establishment, we have devoted mass manpower, materials and financial resources into Analytics-Admn-201 exam materials and until now, we have a bold idea that we will definitely introduce our study materials to the whole world and make all people that seek fortune and better opportunities have access to realize their life value. Our Analytics-Admn-201 Practice Questions, therefore, is bound to help you pass though the exam and win a better future. We will also continuously keep a pioneering spirit and are willing to tackle any project that comes your way.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Topic 2	<ul style="list-style-type: none"> Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 3	<ul style="list-style-type: none"> Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 4	<ul style="list-style-type: none"> Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 5	<ul style="list-style-type: none"> Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Analytics-Admn-201 Certification Dumps | Dumps Analytics-Admn-201 Cost

A lot of our candidates used up all examination time and leave a lot of unanswered questions of the Analytics-Admn-201 exam questions. It is a bad habit. In your real exam, you must answer all questions in limited time. So you need our timer to help you on Analytics-Admn-201 Practice Guide. Our timer is placed on the upper right of the page. The countdown time will run until it is time to submit your exercises of the Analytics-Admn-201 study materials. Also, it will remind you when the time is soon running out.

Salesforce Certified Tableau Server Administrator Sample Questions (Q46-Q51):

NEW QUESTION # 46

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Limitation on storage space
- B. Limitation on number of users
- C. Ability to embed credentials
- D. Language and locale

Answer: A,D

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.

* Option B (Limitation on storage space): Correct.

* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.

* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v

100000.

- * Impact: Prevents one site from monopolizing resources in multi-site deployments.
- * Option D (Language and locale): Correct.
- * Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).
- * How: Site settings UI-e.g., "Language: French, Locale: France."
- * Impact: Tailors the user experience per site's audience.
- * Option A (Ability to embed credentials): Incorrect.
- * Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.
- * Option C (Limitation on number of users): Incorrect.
- * Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.
- Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.
- Reference: Tableau Server Documentation - "Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 47

To which site role can you associate the Viewer user-based license level?

- A. Explorer (can publish)
- B. Explorer
- C. Creator
- D. **Viewer**

Answer: D

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and the web interface. It corresponds to the Creator site role, not Viewer.

Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.

Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 48

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. Importing a group from Active Directory requires a .csv file that lists user IDs
- B. **New users created as a result of importing a group are assigned the site role specified during the import**
- C. You can change the name of a group during import, although this will not change the group's name in Active Directory
- D. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import

Answer: B

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

- * New users get Explorer.
- * Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).
- * Why: Ensures consistent onboarding-new users align with the group's intended access.
- * Option A (Existing users' roles change to match import): Incorrect.
- * Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.
- * Option B (Requires a .csv file): Incorrect.
- * Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).
- * Option C (Change group name during import): Incorrect.
- * Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 49

What should you use to set a preferred active repository?

- A. The TSM browser client's Maintenance page
- **B. A tsm configuration set command**
- C. The TSM browser client's Configuration Topology page
- D. A tabcmd set command

Answer: B

Explanation:

Tableau Server uses a PostgreSQL database as its repository to store metadata, user information, and permissions. In a high-availability (HA) setup with multiple nodes, there are typically two repository instances: one active and one passive. The "preferred active repository" refers to designating which repository instance should take priority as the active one. This is managed through Tableau Services Manager (TSM).

The correct method to set the preferred active repository is by using the tsm configuration set command.

Specifically, you would use a command like:

```
tsm configuration set -k pgsql.preferred_host -v <hostname>
```

This command allows an administrator to specify the preferred host for the active repository, ensuring control over which node takes precedence in an HA environment.

Option B (tabcmd set command) is incorrect because tabcmd is a command-line utility primarily used for administrative tasks like managing users, groups, and content (e.g., publishing workbooks), not for configuring server topology or repository settings.

Option C (TSM browser client's Maintenance page) is incorrect because the Maintenance page in the TSM web interface is used for tasks like backups, restores, and cleanup, but it does not provide an option to set the preferred active repository.

Option D (TSM browser client's Configuration Topology page) is partially relevant since the Topology page displays the current configuration of services across nodes, including the repository. However, it does not allow direct modification of the preferred active repository; this must be done via the tsm command line.

Reference: Tableau Server Documentation - "Configure Tableau Server Repository" (<https://help.tableau.com/current/server/en-us/repository.htm>) and "TSM Command Line Reference" (https://help.tableau.com/current/server/en-us/cli_configuration_set.htm).

NEW QUESTION # 50

What two types of users can sign in to Tableau Server and edit the permissions for a workbook in a project, when permissions are NOT set to Locked to the project? (Choose two.)

- **A. The workbook's owner**
- B. Users that have the project and workbook Viewer role

- C. Users that have the workbook Interactor role
- D. Users set to Project Leader for the workbook's project

Answer: A,D

Explanation:

Editing permissions on a workbook in Tableau Server depends on the user's role and the project's permission settings. Since permissions are not locked (i.e., "Managed by Owner"), let's dissect who can edit them:

* Permission Model:

* Not Locked: Owners of content (workbooks, data sources) can set permissions, and Project Leaders can override at the project level.

* Site Roles: Define maximum capabilities (e.g., Viewer, Explorer, Creator).

* Capabilities: "Set Permissions" is explicit-only certain users get it.

* Option C (The workbook's owner): Correct.

* Details: The owner (typically the publisher) has full control over their workbook when permissions are Managed by Owner:

* How: In the UI, go to Content > Workbooks > Actions > Permissions-owners can edit rules (e.g., grant Editor to a group).

* Site Role: Minimum of Explorer (can publish) or Creator to publish, ensuring "Set Permissions" capability.

* Why: Ownership inherently includes permission management unless locked.

* Option D (Users set to Project Leader for the workbook's project): Correct.

* Details: Project Leaders are assigned via Content > Projects > Actions > Permissions > Set Project Leader:

* Power: Can edit permissions for all content in the project, even if not the owner.

* Site Role: Requires Site Administrator or Server Administrator (Creator/Explorer variants suffice).

* Why: Overrides ownership in Managed by Owner mode-ensures project-level governance.

* Option A (Users with project and workbook Viewer role): Incorrect.

* Why: Viewer role (site-level) limits users to viewing-lacks "Set Permissions" capability, regardless of project/workbook rules.

* Option B (Users with workbook Interactor role): Incorrect.

* Why: "Interactor" isn't a standard role-likely a misnomer for Explorer or Viewer with interaction permissions (e.g., Filter). No permission-editing rights exist here.

Why This Matters: Knowing who can edit permissions prevents access control gaps-crucial for collaborative or regulated environments.

Reference: Tableau Server Documentation - "Permissions" (<https://help.tableau.com/current/server/en-us/permissions.htm>), "Project Leader Permissions" (https://help.tableau.com/current/server/en-us/permissions_project_leader.htm).

NEW QUESTION # 51

.....

Our Analytics-Admn-201 study quiz are your optimum choices which contain essential know-hows for your information. If you really want to get the certificate successfully, only Analytics-Admn-201 guide materials with intrinsic contents can offer help they are preeminent materials can satisfy your both needs of studying or passing with efficiency. For our Analytics-Admn-201 Exam Braindumps contain the most useful information on the subject and are always the latest according to the efforts of our professionals.
