Test Palo Alto Networks XSIAM-Analyst Duration - Valid Test XSIAM-Analyst Braindumps

It can be said that our XSIAM-Analyst study materials are the most powerful in the market at present, not only because our company is leader of other companies, but also because we have loyal users. XSIAM-Analyst study materials are not only the domestic market, but also the international high-end market. We are studying some learning models suitable for high-end users. Our research materials have many advantages. Now, I will briefly introduce some details about our XSIAM-Analyst Study Materials for your reference.

Palo Alto Networks XSIAM Analyst Sample Questions (Q128-Q133):

NEW QUESTION # 128
Match each investigation objective with the most appropriate XDM datas

Objective
A) Investigate DNS abuse
B) Review endpoint alert activity
C) Analyze malware process spawning
D) Investigate suspicious file writes
Dataset
1. xdm.dns_query
2. xdm.endpoint_alert
3. xdm.process
4. xdm.file_event
Response:

- A. A-1, B-4, C-3, D-2
- B. A-1, B-3, C-2, D-4
- C. A-4, B-2, C-3, D-1
- D. A-1, B-2, C-3, D-4

Answer: D

NEW QUESTION # 129

During an investigation of an alert with a completed playbook, it is determined that no indicators exist from the email "indicator@test.com" in the Key Assets & Artifacts tab of the parent incident. Which command will determine if Cortex XSIAM has been configured to extract indicators as expected?

- A. !checkIndicatorExtraction text="indicator@test.com"
- B. IcreateNewIndicator value="indicator@test.com"
- C. !extractIndicators text="indicator@test.com" auto-extract=inline
- D. Iemailvalue="indicator@test.com"

Answer: A

Explanation:
The correct answer is C, the !checkIndicatorExtraction text="indicator@test.com" command.
This command specifically verifies if Cortex XSIAM has been correctly configured to extract indicators from given text. It ensures that the text provided ("indicator@test.com") would indeed be recognized and extracted as an indicator under the current configuration of Cortex XSIAM.
Other provided commands do not directly verify the indicator extraction configuration:
Option A: IcreateNewIndicator manually creates an indicator; it does not validate extraction capability.
Option B: !extractIndicators attempts extraction immediately but does not verify existing configuration explicitly.
Option D: Iemailvalue command is generally for creating or querying email indicators, not verifying extraction configuration.
Therefore, the explicit functionality for checking if indicator extraction is configured correctly within Cortex XSIAM is precisely covered by !checkIndicatorExtraction.
Reference Extract from Official Document:
"Verify if Cortex XSIAM is correctly configured to extract indicators using the command !
checkIndicatorExtraction text=<value>."
This exact description confirms that option C is the correct answer to validate the configuration explicitly.

NEW QUESTION # 130

How would Incident Context be referenced in an alert War Room task or alert playbook task?

- A. ${getparentIncidentFields}
- B. ${getParentIncidentContext}
- C. ${parentIncidentContext}
- D. ${parentIncidentFields}

Answer: C

Explanation:
The correct answer is A - ${parentIncidentContext}.

This syntax is the correct variable for referencing the incident context within playbook and War Room tasks, enabling data to be accessed from the parent incident during alert investigation or automation steps.
"Use ${parentIncidentContext} in War Room and playbook tasks to reference the context of the parent incident." Document Reference:EDU-270c-10-lab-guide_02.docx (1).pdf Page:Page 39 (Incident Handling and Playbook Automation section)

NEW QUESTION # 131

Match each prioritization mechanism with its function:
Mechanism
A) Incident Scoring
B) Alert Starring
C) Featured Fields
D) Incident Domains
Function
1. Assigns dynamic priority to incidents
2. Manually flagging alerts for importance
3. Provide context for faster investigation
4. Group alerts by threat or identity dimension
Response:

- A. A-1, B-3, C-2, D-4
- B. A-1, B-2, C-4, D-3
- C. A-4, B-2, C-3, D-1
- D. A-1, B-2, C-3, D-4

Answer: D

NEW QUESTION # 132

How can a SOC analyst highlight alerts generated on C-level executive hosts?

- A. Add a tag to the C-level executive users
- B. Add the C-level executive users to the Executive Accounts asset role.
- C. Create a Featured Alert field for the C-level hosts
- D. Create a dynamic group for the C-level hosts.

Answer: B

Explanation:
The correct answer is A - Add the C-level executive users to the Executive Accounts asset role.
By assigning C-level executives to the Executive Accounts asset role, any alerts generated from those accounts or devices are highlighted and given higher visibility in Cortex XSIAM.
"Adding C-level users to the Executive Accounts asset role ensures that related alerts are highlighted and prioritized." Document Reference: XSIAM Analyst ILT Lab Guide.pdf Page: Page 49 (Asset and User Management section)

NEW QUESTION # 133

......

Subjects are required to enrich their learner profiles by regularly making plans and setting goals according to their own situation, monitoring and evaluating your study. Because it can help you prepare for the XSIAM-Analyst exam. If you want to succeed in your exam and get the related exam, you have to set a suitable study program. If you decide to buy the XSIAM-Analyst reference materials from our company, we will have special people to advise and support you. Our staff will also help you to devise a study plan to achieve your goal. We believe that if you purchase XSIAM-Analyst Test Guide from our company and take it seriously into consideration, you will gain a suitable study plan to help you to pass your exam in the shortest time.
