ValidVCE's Fortinet FCSS_SASE_AD-25 questions are available in PDF format. Our FCSS - FortiSASE 25 Administrator (FCSS_SASE_AD-25) PDF is embedded with questions relevant to the actual exam content only. Fortinet FCSS_SASE_AD-25 PDF is printable and portable, so you can learn with ease and share it on multiple devices. You can use this Fortinet FCSS_SASE_AD-25 PDF on your mobile and tablet anywhere, anytime, without the internet and installation process. Our qualified team of FCSS - FortiSASE 25 Administrator Professionals update FCSS - FortiSASE 25 Administrator (FCSS_SASE_AD-25) study material to improve the quality and to match the changes in the syllabus and pattern shared by Fortinet.

Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which statement describes the FortiGuard forensics analysis feature on FortiSASE?

- A. It is a 24x7x365 monitoring service of your FortiSASE environment.
- **B. It can help customers identify and mitigate potential risks to their network.**
- C. It can monitor endpoint resources in real-time.
- D. It can help troubleshoot user-to-application performance issues.

Answer: B

Explanation:

The FortiGuard forensics analysis feature on FortiSASE is designed to help customers identify and mitigate potential risks to their network. This feature provides detailed insights into suspicious activities, threats, and anomalies detected by FortiSASE. By analyzing logs, traffic patterns, and threat intelligence, FortiGuard forensics enables administrators to investigate incidents, understand their root causes, and take proactive measures to secure the network.

Here's why the other options are incorrect:

A. It can help troubleshoot user-to-application performance issues: Performance troubleshooting is typically handled by features like Digital Experience Monitoring (DEM) or application performance monitoring tools, not forensics analysis.

C. It can monitor endpoint resources in real-time: Real-time endpoint monitoring is a function of endpoint security solutions like FortiClient or FortiEDR, not FortiGuard forensics analysis.

D. It is a 24x7x365 monitoring service of your FortiSASE environment: While Fortinet offers managed services for continuous monitoring, FortiGuard forensics analysis is not a dedicated monitoring service. Instead, it focuses on post-incident investigation and risk mitigation.

FortiSASE Administration Guide - Threat Detection and Response

NEW QUESTION # 49

An organization must block user attempts to log in to non-company resources while using Microsoft Office 365 to prevent users from accessing unapproved cloud resources.

Which FortiSASE feature can you implement to meet this requirement?

- A. data loss prevention (DLP) with Microsoft Purview Information Protection (MPIP)
- **B. web filter with inline-CASB**
- C. application control with inline-CASB
- D. DNS filter with domain filter

Answer: B

NEW QUESTION # 50

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can help monitor endpoint system resource usage.
- B. Zero-trust tags can be assigned to endpoint profiles based on user groups.
- **C. Zero-trust tags can be used to allow or deny access to network resources.**
- **D. Zero-trust tags can determine the security posture of an endpoint.**

Answer: C,D

Explanation:

Zero-trust tags assess endpoint compliance based on defined posture rules and are used in access policies to control whether a device is permitted or denied access to specific network resources.

NEW QUESTION # 51

An organization needs to resolve internal hostnames using its internal rather than public DNS servers for remotely connected endpoints. Which two components must be configured on FortiSASE to achieve this? (Choose two.)

- A. DNS filter
- **B. Split DNS rules**
- **C. Split tunnelling destinations**
- D. SSL deep inspection

Answer: B,C

Explanation:

To resolve internal hostnames using internal DNS servers for remotely connected endpoints, the following two components must be configured on FortiSASE:

Split DNS Rules:

Split DNS allows the configuration of specific DNS queries to be directed to internal DNS servers instead of public DNS servers. This ensures that internal hostnames are resolved using the organization's internal DNS infrastructure, maintaining privacy and accuracy for internal network resources.

Split Tunneling Destinations:

Split tunneling allows specific traffic (such as DNS queries for internal domains) to be routed through the VPN tunnel while other traffic is sent directly to the internet.

By configuring split tunneling destinations, you can ensure that DNS queries for internal hostnames are directed through the VPN to the internal DNS servers.

FortiOS 7.2 Administration Guide: Provides details on configuring split DNS and split tunneling for VPN clients.

FortiSASE 23.2 Documentation: Explains the implementation and configuration of split DNS and split tunneling for securely resolving internal hostnames.

NEW QUESTION # 52

Refer to the exhibits.

How will the application vulnerabilities be patched, based on the exhibits provided?

- A. The vulnerability will be patched automatically based on the endpoint profile configuration.
- B. The end user will patch the vulnerabilities using the FortiClient software.
- C. The vulnerability will be patched by installing the patch from the vendor's website.
- D. An administrator will patch the vulnerability remotely using FortiSASE.

Answer: C

NEW QUESTION # 53

.....

Living in such a world where competitiveness is a necessity that can distinguish you from others, every one of us is trying our best to improve ourselves in every way. It has been widely recognized that the FCSS_SASE_AD-25 exam can better equip us with a newly gained personal skill, which is crucial to individual self-improvement in today's computer era. With the certified advantage admitted by the test Fortinet certification, you will have the competitive edge to get a favorable job in the global market. Here our FCSS_SASE_AD-25 Study Materials are tailor-designed for you.
