Choosing our C-SEC-2405 learning guide is not only an enrichment of learning content, but also an opportunity to improve our own discovery space. Our C-SEC-2405 study dumps could bring huge impact to your personal development, because in the process of we are looking for a job, hold a certificate you have more advantage than your competitors, the company will be a greater probability of you. After using our C-SEC-2405 Study Dumps, users can devote more time and energy to focus on their major and makes themselves more and more prominent in the professional field. Therefore, our C-SEC-2405 exam materials can help you achieve multiple returns in the future, provide you with more opportunities to pursue higher life goals, and create a higher quality of life.

## SAP Certified Associate - Security Administrator Sample Questions (Q15-Q20):

### NEW QUESTION # 15

Which privilege types are available in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. Application
- B. Package
- C. Analytic
- D. Object
- E. System

**Answer: B,D,E**

Explanation:

\* Context: Privileges in SAP HANA Cloud define access control and permissions for various system entities.

\* Solution Descriptions:

\* B. Package: Grants permissions for packages, a logical grouping of objects.

\* C. System: Controls system-level actions and configurations.

\* E. Object: Provides access control at the object level.

SAP Security References:

\* SAP HANA Cloud Privilege Management Documentation

### NEW QUESTION # 16

Which of the following functions within SAP GRC Access Control support access certification and review?

Note: There are 2 correct answers to the question.

- A. Role Review
- B. Role Ream
- C. Review CI User Reaffirm
- D. GO

**Answer: A,C**

Explanation:

Within SAP GRC Access Control, these functions support access certification and periodic reviews to ensure that only authorized

users retain access to critical systems and roles.

\* Review CI User Reaffirm (C): This function facilitates user access reviews, ensuring that existing user access aligns with current business needs and compliance requirements.

\* Role Review (D): This feature allows administrators to periodically review and validate the relevance and assignment of roles to users. Any unnecessary or unauthorized roles can be removed or adjusted.

SAP Security References:

\* SAP GRC Access Control User Guide

\* SAP Documentation: Role and User Certification Process

\* SAP Help Portal: Role Management in GRC Access Control

### NEW QUESTION # 17

What must you do if you want to enforce an additional authorization check when a user starts an SAP transaction?

- A. Assign authorization object S\_START to the chosen transaction code with transaction SU24 and specify the Program ID and Object Type.
- B. Assign the authorization object to be checked to the chosen transaction code with transaction SU24 and set Default Status to "Yes".
- C. Assign the authorization object to be checked to the chosen transaction code in the SAP Default authorization data using transaction SU22 and set Check Indicator to "Check".
- **D. Assign the authorization object and permissions to the chosen transaction code using transaction SE93.**

**Answer: D**

Explanation:

To enforce an additional authorization check when a user starts an SAP transaction, you must assign the relevant authorization object and its permissions to the transaction code using transaction SE93. This transaction allows you to define or modify the properties of a transaction, including specifying authorization objects that must be checked when the transaction is executed. By linking the authorization object directly to the transaction in SE93, the system enforces the additional check at the point of transaction execution, ensuring that only authorized users can proceed. Transactions SU24 and SU22 are used for maintaining authorization defaults, but they do not directly enforce checks at transaction start, and S\_START is specific to Fiori app authorizations, not general transactions.

### NEW QUESTION # 18

In the administration console of the Cloud Identity Services, which system property types can you add? Note:

There are 2 correct answers to this question.

- **A. Standard**
- B. Internal
- **C. Credential**
- D. Default

**Answer: A,C**

Explanation:

In the administration console of SAP Cloud Identity Services, administrators can add system property types to configure system behavior and integration settings. The Credential property type allows the definition of authentication credentials, such as usernames and passwords, for connecting to external systems or identity providers, ensuring secure communication. The Standard property type is used to configure general system settings, such as URLs, timeouts, or other operational parameters, that are essential for system functionality.

These property types enable flexible and secure management of identity services. Internal and Default are not recognized property types in this context; Internal may refer to system-internal configurations not exposed to administrators, and Default is not a specific property type but rather a concept for preconfigured values. This structure supports robust identity management across SAP's cloud ecosystem.

### NEW QUESTION # 19

What can be assigned directly to a user when using the SAP Launchpad service in SAP BTP?

- A. Catalogs
- B. Spaces
- **C. Launchpad roles**
- D. Role collections

**Answer: C**

Explanation:

In the SAP Launchpad service in SAP Business Technology Platform (BTP), users can be assigned Launchpad roles directly. These roles define the permissions and functionalities available to the user within the Launchpad.
