#### NEW QUESTION # 241

Assume a table called table exists and contains 3 fields: field1, field2, field3. Examine the Access Control list for table:

table.None read Access Control for users with the admin and itil roles

table. \* read Access Control for users with the admin role

table. field3 read Access Control for users with the itil role

Which field or fields can a user with the itil role read?

- A. field1, field2, and field3
- **B. field3 only**

- Answer: B**

An Access Control list (ACL) defines what data users can access and how they can access it in ServiceNow tables<sup>1</sup>. The ACL evaluates the user roles and the conditions defined in the ACL rules to determine the user's access level<sup>2</sup>. In this case, the ACL rules for the table are as follows:

\* table. field3 read Access Control for users with the itil role: This means that users with the itil role can read only the field3 in the table.
