SC-401 German, SC-401 Lernhilfe

ZertPruefung setzt sich aus den riesigen IT-Eliteteams zusammen. Sie alle haben hohe Autorität im IT-Bereich. Sie nutzen professionelle Kenntnisse und Erfahrungen aus, um den an den Microsoft SC-401 Zertifizierungsprüfungen beteiligten Kandidaten die Prüfungsunterlagen zu bieten. Die Genauigkeit von Microsoft SC-401 Fragen Und Antworten aus ZertPruefung ist sehr hoch. Wir versprechen, dass Sie die Prüfung beim ersten Versuch 100% bestehen können. Außerdem stehen wir Ihnen einen einjährigen Update-Service zur Verfügung.

Microsoft Administering Information Security in Microsoft 365 SC-401 Prüfungsfragen mit Lösungen (Q91-Q96):

91. Frage

You have a data loss prevention (DIP) policy that has the advanced DIP rules shown in the following table.

Name	Priority	Actions
Rule1	0	• Notify users with email and policy tips • User overrides: On
Rule2	1	• Notify users with email and policy tips • Restrict access to the content • User overrides: Off
Rule3	2	• Notify users with email and policy tips • Restrict access to the content • User overrides: On
Rule4	3	• Notify users with email and policy tips • Restrict access to the content • User overrides: Off

You need to identify which rules will apply when content matches multiple advanced DIP rules.

Which rules should you identify? To answer, select the appropriate options in the answer area.

If content matches Rule2, Rule3, and Rule4:

Only Rule2 takes effect
Only Rule3 takes effect
Only Rule4 takes effect
Rule2, Rule3, and Rule4 take effect

If content matches Rule2, Rule3, and Rule4:

Only Rule2 takes effect
Only Rule3 takes effect
Only Rule4 takes effect
Rule2, Rule3, and Rule4 take effect

Antwort:

Begründung:

If content matches Rule2, Rule3, and Rule4:

Only Rule2 takes effect
Only Rule3 takes effect
Only Rule4 takes effect
Rule2, Rule3, and Rule4 take effect

If content matches Rule2, Rule3, and Rule4:

Only Rule2 takes effect
Only Rule3 takes effect
Only Rule4 takes effect
Rule2, Rule3, and Rule4 take effect

Explanation:

Answer Area

If content matches Rule2, Rule3, and Rule4: Only Rule1 takes effect

If content matches Rule2, Rule3, and Rule4: Rule2, Rule3, and Rule4 take effect

Comprehensive Detailed Explanation with References

When multiple advanced DLP rules match content, Microsoft 365 DLP evaluates based on:

Rule priority

Lower number = higher priority (0 highest).

Among Rule2 (priority 1), Rule3 (priority 2), and Rule4 (priority 3), Rule2 has the highest priority.

Conflict resolution (single vs multiple rules applied)

By default, only the highest-priority rule applies if multiple rules match. # That's why in the first dropdown, the correct answer is Only Rule2 takes effect.

However, you can configure advanced DLP to allow multiple matching rules to take effect simultaneously. If this setting is enabled, then Rule2, Rule3, and Rule4 all apply. # That's why in the second dropdown, the correct answer is Rule2, Rule3, and Rule4 take effect.

Microsoft Learn: Order of rule processing in DLP

Microsoft Learn: Advanced DLP rule precedence

92. Frage

You have a Microsoft 365 subscription.

You have a user named User1. Several users have full access to the mailbox of User1.

Some email messages sent to User 1 appear to have been read and deleted before the user viewed them. When you search the audit log in the Microsoft Purview portal to identify who signed in to the mailbox of User 1, the results are blank.

You need to ensure that you can view future sign-ins to the mailbox of User1.

Solution: You run the Set-AuditConfig -Workload Exchange command.

Does that meet the goal?

- A. Yes
- B. No

Antwort: B

Begründung:

Comprehensive Detailed Explanation with References

The command Set-AuditConfig -Workload Exchange is related to configuring auditing for workloads but does not enable mailbox auditing.

To capture and view who is accessing User1's mailbox, mailbox auditing must be enabled at the mailbox level in Exchange Online.

Correct solution would be:

Set-Mailbox -Identity User1 -AuditEnabled \$true

Mailbox auditing is enabled by default for all mailboxes in Microsoft 365 now, but if it is disabled, enabling auditing at the mailbox level is required. Running Set-AuditConfig -Workload Exchange alone does not accomplish this.

Reference: Mailbox auditing in Microsoft 365

93. Frage

You have 4 Microsoft 365 E5 subscription that contains two Microsoft SharePoint Online sites named Site1 and Site2. You plan to configure a retention label named Label1 and apply Label1 to all the files in Site1. You need to ensure that two years after a file is created in Site1, the file moves automatically to Site2. How should you configure the Choose what happens after the retention period setting for Label1?

- A. Run a Power Automate flow
- B. Start a disposition review
- C. Deactivate retention settings
- D. Change the label

Antwort: A

Begründung:

You want files in Site1 that are labeled with Label1 to automatically move to Site2 two years after creation.

In Microsoft Purview Retention Labels, under "Choose what happens after the retention period", the available options are:

Deactivate retention settings - Ends retention but does not move files.

Start a disposition review - Sends items to reviewers for approval (manual process, not auto-move).

Change the label - Applies a new retention label (but does not move files to another site).

Run a Power Automate flow - Executes an automated workflow such as moving the file to another SharePoint library or site, notifying users, or applying custom business processes.

Since the requirement is automatic movement of files from Site1 to Site2 after 2 years, the only valid choice is Run a Power Automate flow.

Reference:

Microsoft Learn: Actions after a retention period for retention labels

Quote: "For retention labels, you can choose to trigger a Power Automate flow when the retention period

94. Frage

You have a Microsoft 365 E5 subscription that contains a Microsoft Teams channel named Channel1.

Channel1 contains research and development documents.

You plan to implement Microsoft 365 Copilot for the subscription.

You need to prevent the contents of files stored in Channel1 from being included in answers generated by Copilot and shown to unauthorized users.

What should you use?

- A. Microsoft Purview insider risk management

- B. sensitivity labels
- C. Microsoft Purview Information Barriers
- D. data loss prevention (DLP)

Antwort: B

Begründung:

To prevent the contents of files stored in Channel1 from being included in Microsoft 365 Copilot responses and ensure unauthorized users cannot access them, you should use Microsoft Purview Sensitivity Labels.

Sensitivity labels allow you to classify, protect, and restrict access to sensitive files. You can configure label- based encryption and access control policies to ensure that only authorized users can access or interact with the files in Channel1. Microsoft 365 Copilot respects sensitivity labels, meaning if a file is labeled with restricted permissions, Copilot will not use it in generated responses for unauthorized users.

95. Frage

You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint Online site named Site1 and the users shown in the following table.

Name	Member of
User1	Members group of Site1
User2	Owners group of Site1
Admin1	SharePoint Administrator role

You have a data loss prevention (DLP) policy named DLP1 as shown in the following exhibit.

Actions

Use actions to protect content when the conditions are met.

Restrict access or encrypt the content in Microsoft 365 locations

☒ **Restrict access or encrypt the content in Microsoft 365 locations**

☒ Block users from receiving email or accessing shared SharePoint, OneDrive, and Teams files.
By default, users are blocked from sending Teams chats and channel messages that contain the type of content you're protecting. But you can choose who is blocked from receiving emails or accessing files shared from SharePoint, OneDrive, and Teams.

☒ Block everyone. ⓘ

☐ Block only people outside your organization. ⓘ

☐ Block only people who were given access to the content through the "Anyone with the link" option. ⓘ

+ Add an action

You apply DLP1 to Site1.

User1 uploads a file named File1 to Site1. File1 does NOT match any of the DLP1 rules. User2 updates File1 to contain data that matches the DLP1 rules.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

Statements

Yes

No

User1 can access File1 on Site1.
