

SAP-C02 높은 통과율 인기덤프 100% 시험패스가 가능한 덤프 자료

그 외, KoreaDumps SAP-C02 시험 문제집 일부가 지금은 무료입니다: https://drive.google.com/open?id=16WWcYs_voleRSiWCShrGvpQiWOLj_DE6

KoreaDumps에서 제공해드리는 IT인증시험대비 덤프를 사용해보신적이 있으신지요? 만약에 다른 과목을 사용해보신 분이라면 Amazon SAP-C02덤프도 바로 구매할것입니다. 첫번째 구매에서 패스하셨다면 덤프에 신뢰가 있을것이고 불합격받으셨다하더라도 바로 환불해드리는 약속을 지켜드렸기때문입니다. 처음으로 저희 사이트에 오신 분이라면 Amazon SAP-C02덤프로 첫구매에 도전해보지 않으실래요? 저희 덤프로 쉬운 자격증 취득이 가능할것입니다.

아마존 SAP-C02 (AWS Certified Solutions Architect - Professional) 자격증 시험은 AWS 서비스에 대한 깊은 이해를 가지고 클라우드에서 확장 가능하고 고 가용성 및 내결함성 있는 시스템을 설계하고 배포할 수 있는 경험이 있는 솔루션 아키텍트를 대상으로합니다. 시험은 후보자의 AWS에서 복잡한 애플리케이션을 설계하고 배포하는 능력, 보안 제어 구현 및 효율적이고 비용 효과적인 방식으로 운영을 관리하는 능력을 시험합니다. 이 자격증은 AWS 자격증의 최고 수준이며 클라우드 아키텍처 솔루션을 설계하고 배포하는 데 몇 년의 경험이있는 전문가를 대상으로 권장됩니다.

아마존 SAP-C02 자격증 시험은 클라우드 컴퓨팅 및 솔루션 아키텍처에 전문화된 전문가들에게 귀중한 자격증입니다. 이 시험은 후보자의 AWS 서비스 및 아키텍처 원칙과 관련된 여러 도메인에서의 지식과 기술을 테스트합니다. 시험에 성공하면 많은 직업 기회가 열리며 AWS에서 확장 가능하고 고가용성 시스템을 설계하고 배포할 수 있는 능력을 증명할 수 있습니다.

SAP-C02 최신버전 시험대비 공부자료 - SAP-C02인증시험공부

KoreaDumps는 Amazon인증SAP-C02시험에 대하여 가이드를 해줄 수 있는 사이트입니다. KoreaDumps는 여러분의 전문지식을 업그레이드시켜줄 수 있고 또한 한번에 Amazon인증SAP-C02시험을 패스하도록 도와주는 사이트입니다. KoreaDumps제공하는 자료들은 모두 IT업계전문가들이 자신의 지식과 끈임없는 경험등으로 만들어낸 퍼펙트 자료들입니다. 품질은 정확도 모두 보장되는 문제집입니다. Amazon인증SAP-C02시험은 여러분이 IT지식을 한층 업할

수 있는 시험이며 우리 또한 일년무료 업데이트서비스를 제공합니다.

SAP-C02 시험에 합격하면 AWS에서 복잡하고 확장 가능하며 고 가용성 시스템을 설계 및 배포하기 위해 필요한 기술과 지식이 있는 것으로 인정됩니다. 이 자격증은 고용주들에게 높은 가치가 있으며 더 높은 급여와 더 나은 직무 기회로 이어질 수 있습니다. 또한, 최신 AWS 기술을 학습하고 숙달하기 위해 시간과 노력을 투자하겠다는 의지와 직업에 대한 약속을 입증합니다.

최신 AWS Certified Solutions Architect SAP-C02 무료 샘플문제 (Q608-Q613):

질문 # 608

A company is using Amazon OpenSearch Service to analyze data. The company loads data into an OpenSearch Service cluster with 10 data nodes from an Amazon S3 bucket that uses S3 Standard storage. The data resides in the cluster for 1 month for read-only analysis. After 1 month, the company deletes the index that contains the data from the cluster. For compliance purposes, the company must retain a copy of all input data.

The company is concerned about ongoing costs and asks a solutions architect to recommend a new solution.

Which solution will meet these requirements MOST cost-effectively?

- A. Reduce the number of data nodes in the cluster to 2. Add instance-backed data nodes to handle the expected capacity. Transition the input data from S3 Standard to S3 Glacier Deep Archive when the company loads the data into the cluster.
- B. Replace all the data nodes with UltraWarm nodes to handle the expected capacity. Transition the input data from S3 Standard to S3 Glacier Deep Archive when the company loads the data into the cluster.
- C. Reduce the number of data nodes in the cluster to 2. Add UltraWarm nodes to handle the expected capacity. Configure the indexes to transition to UltraWarm when OpenSearch Service ingests the data. Add cold storage nodes to the cluster. Transition the indexes from UltraWarm to cold storage. Delete the input data from the S3 bucket after 1 month by using an S3 Lifecycle policy.
- D. Reduce the number of data nodes in the cluster to 2. Add UltraWarm nodes to handle the expected capacity. Configure the indexes to transition to UltraWarm when OpenSearch Service ingests the data. Transition the input data to S3 Glacier Deep Archive after 1 month by using an S3 Lifecycle policy.

정답: D

설명:

By reducing the number of data nodes in the cluster to 2 and adding UltraWarm nodes to handle the expected capacity, the company can reduce the cost of running the cluster. Additionally, configuring the indexes to transition to UltraWarm when OpenSearch Service ingests the data will ensure that the data is stored in the most cost-effective manner. Finally, transitioning the input data to S3 Glacier Deep Archive after 1 month by using an S3 Lifecycle policy will ensure that the data is retained for compliance purposes, while also reducing the ongoing costs.

질문 # 609

Question:

A company runs production workloads on EC2 On-Demand Instances and RDS for PostgreSQL. They want to reduce costs without compromising availability or capacity.

- A. Use Budgets and Trusted Advisor, then manually terminate and buy RIs.
- B. Use Cost Explorer, alerts, and replace with Spot Instances.
- C. Use CUR and Lambda to terminate underutilized instances. Buy Savings Plans.
- D. Use Compute Optimizer and Trusted Advisor for recommendations. Apply rightsizing, auto scaling, and purchase a Compute Savings Plan.

정답: D

설명:

Comprehensive and Detailed Explanation:

C is correct: AWS Compute Optimizer uses machine learning to analyze usage patterns and recommends rightsizing. Trusted Advisor adds further insights. Combining these with Savings Plans gives the best cost optimization without reducing availability.

* A is risky due to using Lambda for termination.

* B and D offer partial or manual solutions.

#Reference: AWS Compute Optimizer

질문 # 610

A solutions architect needs to copy data from an Amazon S3 bucket in an AWS account to a new S3 bucket in a new AWS account. The solutions architect must implement a solution that uses the AWS CLI.

Which combination of steps will successfully copy the data? (Choose three.)

- A. Create a bucket policy to allow a user in the destination account to list the source bucket's contents and read the source bucket's objects. Attach the bucket policy to the source bucket.
- B. Create an IAM policy in the source account. Configure the policy to allow a user in the source account to list contents and get objects in the source bucket, and to list contents, put objects, and set object ACLs in the destination bucket. Attach the policy to the user.
- C. Run the `aws s3 sync` command as a user in the source account. Specify the source and destination buckets to copy the data.
- D. Create an IAM policy in the destination account. Configure the policy to allow a user in the destination account to list contents and get objects in the source bucket, and to list contents, put objects, and set object ACLs in the destination bucket. Attach the policy to the user.
- E. Create a bucket policy to allow the source bucket to list its contents and to put objects and set object ACLs in the destination bucket. Attach the bucket policy to the destination bucket.
- F. Run the `aws s3 sync` command as a user in the destination account. Specify the source and destination buckets to copy the data.

정답: A,D,F

설명:

Step B is necessary so that the user in the destination account has the necessary permissions to access the source bucket and list its contents, read its objects. Step D is needed so that the user in the destination account has the necessary permissions to access the destination bucket and list contents, put objects, and set object ACLs. Step F is necessary because the `aws s3 sync` command needs to be run using the IAM user credentials from the destination account, so that the objects will have the appropriate permissions for the user in the destination account once they are copied.

질문 # 611

A company plans to deploy a new private intranet service on Amazon EC2 instances inside a VPC. An AWS Site-to-Site VPN connects the VPC to the company's on-premises network. The new service must communicate with existing on-premises services. The on-premises services are accessible through the use of hostnames that reside in the company example DNS zone. This DNS zone is wholly hosted on premises and is available only on the company's private network.

A solutions architect must ensure that the new service can resolve hostnames on the company example domain to integrate with existing services.

Which solution meets these requirements?

- A. Create an empty private zone in Amazon Route 53 for company example. Add an additional NS record to the company's on-premises company example zone that points to the authoritative name servers for the new private zone in Route 53.
- B. Turn on DNS hostnames for the VPC. Configure a new outbound endpoint with Amazon Route 53 Resolver. Create a Resolver rule to forward requests for company example to the on-premises name servers.
- C. Use AWS Systems Manager to configure a run document that will install a hosts file that contains any required hostnames. Use an Amazon EventBridge rule to run the document when an instance is entering the running state.
- D. Turn on DNS hostnames for the VPC. Configure a new inbound resolver endpoint with Amazon Route 53 Resolver. Configure the on-premises DNS server to forward requests for company example to the new resolver.

정답: B

설명:

<https://docs.aws.amazon.com/Route53/latest/DeveloperGuide/resolver.html>

질문 # 612

A company is serving files to its customers through an SFTP server that is accessible over the internet. The SFTP server is running on a single Amazon EC2 instance with an Elastic IP address attached. Customers connect to the SFTP server through its Elastic IP address and use SSH for authentication. The EC2 instance also has an attached security group that allows access from all customer IP addresses.

A solutions architect must implement a solution to improve availability minimize the complexity of infrastructure management and minimize the disruption to customers who access files. The solution must not change the way customers connect. Which solution will meet these requirements?

- A. Disassociate the Elastic IP address from the EC2 instance. Create a new Amazon Elastic File System (Amazon EFS) file system to be used for SFTP file hosting. Create an AWS Fargate task definition to run an SFTP server. Specify the EFS file system as a mount in the task definition. Create a Fargate service by using the task definition, and place a Network Load Balancer (NLB) front of the service. When configuring the service, attach the security group with customer IP addresses to the tasks that run the SFTP server. Associate the Elastic IP address with the NLB. Sync all files from the SFTP server to the S3 bucket.
- B. Disassociate the Elastic IP address from the EC2 instance. Create an Amazon S3 bucket to be used for sftp file hosting. Create an AWS Transfer Family server. Configure the Transfer Family server with a publicly accessible endpoint. Associate the SFTP Elastic IP address with the new endpoint. Point the Transfer Family server to the S3 bucket. Sync all files from the SFTP server to the S3 bucket.
- C. Disassociate the Elastic IP address from the EC2 instance. Create a multi-attach Amazon Elastic Block Store (Amazon EBS) volume to be used for SFTP file hosting. Create a Network Load Balancer (NLB) with the Elastic IP address attached. Create an Auto Scaling group with EC2 instances that run an SFTP server. Define in the Auto Scaling group that instances that are launched should attach the new multi-attach EBS volume. Configure the Auto Scaling group to automatically add instances behind the NLB. Configure the Auto Scaling group to use the security group that allows customer IP addresses for the EC2 instances that the Auto Scaling group launches. Sync all files from the SFTP server to the new multi-attach EBS volume.
- **D. Disassociate the Elastic IP address from the EC2 instance. Create an Amazon S3 bucket to be used for SFTP file hosting. Create an AWS Transfer Family server. Configure the Transfer Family server with a VPC-hosted, internet-facing endpoint. Associate the SFTP Elastic IP address with the new endpoint. Attach the security group with customer IP addresses to the new endpoint. Point the Transfer Family server to the S3 bucket. Sync all files from the SFTP server to the S3 bucket.**

정답: D
