Citrix Virtual Apps and Desktops 7 Advanced Administration 덤프 다운받기

NEW QUESTION 25
Scenario: A Citrix Engineer has implemented a multi-zone environment with the following characteristics:
- One Primary Zone in New York, one Satellite Zone in San Francisco and another in Singapore
- Microsoft Excel Application available in all zones
- Singapore zone configured as the App Home for Microsoft Excel
- San Francisco configured as the User Home for User1
User1 is currently located in the New York zone, and clicks the icon for Microsoft Excel in Receiver. User1 does NOT have any existing sessions in the environment.
Based on this scenario, a new session will be launched in _____. (Choose the correct option to complete the sentence).

- A. The VDA with the lowest load index
- B. New York
- C. Singapore
- D. San Francisco

Answer: C

Explanation:
<https://www.citrix.com/blogs/2017/04/17/zone-preference-internals/>

NEW QUESTION 26
Which two statements are true regarding the Citrix App Layering Management Console? (Choose two.)

PEGACPRSA22V1높은 통과율 시험덤프공부, PEGACPRSA22V1시험패스 가능한 공부문제

Pegasystems PEGACPRSA22V1 덤프는 고객님의Pegasystems PEGACPRSA22V1시험패스요망에 제일 가까운 시험대비자료입니다. 많은 자료정리 필요없이 Itexamdump에서 제공해드리는 깔끔한Pegasystems PEGACPRSA22V1덤프만 있으면 자격증을 절반 취득한것과 같습니다. Pegasystems PEGACPRSA22V1 덤프를 다운받아 열공하세요.

Pegasystems PEGACPRSA22V1 시험요강:

주제	소개
주제 1	System Integration: This section of the exam measures skills of Automation Engineers and focuses on configuring Pega Robot Studio adapter types. It covers identifying and adjusting adapter properties and values for Windows, Web, and Universal Web adapters, and modifying object properties to enable seamless integration between systems within an automated environment.
주제 2	Deployment: This section of the exam measures skills of Automation Deployment Engineers and focuses on packaging and deploying robotic solutions. It includes creating project configuration files, setting deployment properties, and generating deployment packs to ensure that robotic projects are properly prepared for production environments.
주제 3	Project Management: This section of the exam measures skills of Robotic Solution Developers and covers understanding project documentation essentials such as Solution Design and Solution Architecture Documents. It focuses on recognizing solution structures, defining project types for robotic implementations, and applying proper naming conventions to ensure standardization and clarity across Pega robotic projects.
주제 4	Interaction Framework: This section of the exam measures skills of Pega Integration Specialists and focuses on using and modifying interaction frameworks for project coordination. It covers configuring the interaction.xml file, managing interaction components, handling project-to-project references, defining context values, and implementing activity components to manage workflow interactions across automation projects.
주제 5	Debugging and Diagnostics: This section of the exam measures skills of Automation Developers and covers evaluating data values during debugging and managing diagnostic settings. It includes using diagnostic logs, dissecting and clearing log files, utilizing the Automation Playback feature, and identifying key steps for troubleshooting issues efficiently within robotic solutions.

최신 PCRSA PEGACPRSA22V1 무료 샘플문제 (Q54-Q59):

질문 # 54

Select the two statements that correctly describe application project items. (Choose Two)

- A. An application project item orchestrates the deployment of a robotic solution and monitors the robots of the robot worker pool.
- B. An application project item integrates with Windows applications by using a self-hosted REST service through JavaScript.
- C. Application project items have accessible properties, methods, and events that launch, monitor, and expose enterprise applications for automation.
- D. Using an application project item, users can integrate with Windows, web, or text applications that run on the client computer.
- E. An application project item is the connection point between Pega Platform and an automation.

정답: C,D

설명:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

An application project item in Pega Robot Studio represents an integration layer between the automation project and an external application (Windows, Web, or Text). Each project item defines how to launch, attach, and control the target application.

According to the Pega Robotics System Design and Implementation Guide, in the section "Application Project Items Overview", it states:

"An application project item defines the interaction between a robotic solution and an external application.

It provides properties, methods, and events that allow the automation to start, monitor, and control the target application.

Pega Robot Studio supports application project items for Windows, Web, and Text adapters, enabling integration with all major enterprise application types." Detailed Reasoning:

* Option A is correct because application project items are the mechanism by which Pega Robotics integrates with Windows, Web, and Text applications on the client machine.

* Option E is correct because each application project item exposes properties, methods, and events that control application behavior (for example, launch, close, monitor, or read UI data).

* Option B is incorrect - Pega Platform integration is handled through Robot Manager or Runtime API, not through application project items.

* Option C is incorrect - Application items do not use REST or JavaScript; these are specific to web connectors.

* Option D is incorrect - Deployment orchestration and robot monitoring are performed by Robot Manager, not by an application project item.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Application Project Items Overview and Integration section (Pega Robotics 19.1 and later).

질문 # 55

During application discovery, what three things must the developer notice about the application to help design the automation? (Choose three.)

- A. How the adapter process data
- **B. How users interact with the applications**
- C. How the automation responds to the process
- **D. How the application processes data**
- **E. How the application responds during use**

정답: B,D,E

설명:

Application discovery is an early technical validation step that involves collecting the information about applications in scope of a potential robotics use case. During discovery you need to find out application types (and if they are on applications support matrix for Pega Robotics), how they are launched, how they are used, and check accessibility and functionality of the controls through interrogation. Application discovery is necessary to ensure that robotics use case is viable and it doesn't have any technical constraints... or, if constraints exist, then what kind of workarounds will be necessary to ensure the use case is successful. The rationale for having application discovery as a best practice is that you don't want to find out half-way through coding an automation that a key control is not available or not performing the desired action.

질문 # 56

The StartPage property is similar to the Path property.
Which statement about the StartPage and Path properties is true?

- A. The StartPage property belongs to the Windows application, while the Path property belongs to the Text application.
- B. The StartPage property belongs to the Windows application, while the Path property belongs to the Web application.
- C. Both the StartPage and Path properties belong to Web and Text applications.
- **D. The StartPage property belongs to the Web application, while the Path property belongs to the Windows application.**

정답: D

설명:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

In Pega Robot Studio, each application adapter includes specific properties that define how the application is launched and managed.

According to the Pega Robotics System Design and Implementation Guide, in the section "Application Adapter Properties and Configuration", the following explanation is given:

"The Path property specifies the executable file (.exe) that starts a Windows application.

The StartPage property specifies the initial URL or webpage that loads when a Web application adapter launches.

Both properties are launch parameters defining how Pega Robot Studio starts and attaches to the target application, but they apply to different adapter types." Detailed Reasoning:

* The Path property is used by Windows adapters, because it defines the file system path of the application executable (for example, C:\Program Files\AppFolder\App.exe).

* The StartPage property is used by Web adapters, because it defines the initial URL or webpage (for example, <https://bankerinsight.pegacom/login.html>) that the adapter opens when starting the browser instance.

Option Analysis:

- * A. Incorrect - The StartPage is for web apps, not Windows.
- * B. Incorrect - Both do not belong to both adapter types.

* C. Correct - StartPage is a Web adapter property; Path is a Windows adapter property.

* D. Incorrect - The StartPage is not for Windows apps, and Path is not for Text adapters.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Application Adapters and Launch Properties section (Pega Robotics 19.1 and later).

질문 # 57

A developer adds a diagnostic log component to an automation and checks the log file.

Based on the image, how did the developer configure the diagnostic log component settings?

□
□
□

- A. Exhibit D
- **B. Exhibit B**
- C. Exhibit A
- D. Exhibit C

정답: B

질문 # 58

You interrogated a web application. All controls and objects matched, and the automations worked as coded.

During the pilot, the solution failed on the web application. The IT department had released a new version of the web application.

Upon review of the new version, you determined that the web page hierarchy changed.

Which interrogation option do you use to correct the solution?

- A. Debug Matching
- B. Select Element
- C. Default
- **D. Replace Control**

정답: D

설명:
