

100% Pass 2026 Cisco 300-620: Implementing Cisco Application Centric Infrastructure Latest Best Practice

2026 Latest RealVCE 300-620 PDF Dumps and 300-620 Exam Engine Free Share: <https://drive.google.com/open?id=1caTEF8dYusUr5RFJ0VAAsQO5h22e821p>

You must improve your skills and knowledge to stay current and competitive. You merely need to obtain the 300-620 certification exam badge in order to achieve this. You must pass the 300-620 Exam to accomplish this, which can only be done with thorough exam preparation. Download the 300-620 exam questions right away for immediate and thorough exam preparation.

The candidates taking the Implementing Cisco Application Centric Infrastructure exam can try a free demo and test features of Cisco 300-620 exam questions before purchasing it. RealVCE also provides three months of free updates on Cisco exam questions if the exam content changes after you have bought the product. The RealVCE gets feedback from learned professionals and makes improvements in the 300-620 valid questions so that it can serve the purpose well. So, are you ready to earn a Implementing Cisco Application Centric Infrastructure, and join a group of certified and skilled professionals? If yes, getting the Cisco 300-620 exam questions by RealVCE is a perfect start to your Implementing Cisco Application Centric Infrastructure exam preparation.

Reliable 300-620 Braindumps Ppt, Valid 300-620 Exam Test

Are you still worrying about how to safely pass Cisco certification 300-620 exams? Do you have thought to select a specific training? Choosing a good training can effectively help you quickly consolidate a lot of IT knowledge, so you can be well ready for Cisco certification 300-620 exam. RealVCE's expert team used their experience and knowledge unremitting efforts to do research of the previous years exam, and finally have developed the best pertinence training program about Cisco Certification 300-620 Exam. Our training program can effectively help you have a good preparation for Cisco certification 300-620 exam. RealVCE's training program will be your best choice.

Cisco 300-620 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• ACI Anywhere: The exam phase focuses on how to describe Multi-Pod and Multi-Site.
Topic 2	<ul style="list-style-type: none">• Integrations: The topic covers how to implement VMware vCenter DVS integration, explain resolution immediacy in VMM, and deploy a service graph.
Topic 3	<ul style="list-style-type: none">• External Network Connectivity: In this exam section, the focus is on how to deploy Layer 2 out (STP• MCP basics and EPG port bindings) and Layer 3 out (excludes transit routing and VRF route leaking).

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q355-Q360):

NEW QUESTION # 355

An engineer is implementing a connection that represents an external bridged network. Which two configurations are used? (Choose two.)

- A. VXLAN outside
- **B. Static path binding**
- C. Layers 2 internal
- **D. Layer 2 outside**
- E. Layer 2 remote fabric

Answer: B,D

Explanation:

https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c07-732033.html#_Toc395143568 There are several different ways to extend layer 2 domain beyond the ACI fabric:

* Extend the EPG out of the ACI fabric - A user can extend an EPG out of the ACI fabric by statically assigning a port (along with VLAN ID) to an EPG. The leaf will learn the endpoint information and assign the traffic (by matching the port and VLAN ID) to the proper EPG, and then enforce the policy. The endpoint learning, data forwarding, and policy enforcement remain the same whether the endpoint is directly attached to the leaf port or if it is behind a layer 2 network (provided the proper VLAN is enabled in the layer2 network).

* Extend the bridge domain out of the ACI fabric - Another option to extend the layer 2 domain is to create a layer 2 outside connection (or external bridged network, as called in the APIC GUI) for a given bridge domain. It effectively extends the bridge domain to the outside network.

* Extend the layer 2 domain with remote VTEP (future) - In the previous two options the incoming traffic from outside is tagged with a VLAN ID. The ACI leaf classifies the traffic to the proper EPG by checking the port and VLAN ID. In future software releases, the remote VTEP will be supported, and can be used to extend the EPG or bridge domain.

The following sections explain these three options in greater detail.

Extend the EPG Out of the ACI Fabric

The user can extend an EPG beyond an ACI leaf by statically assigning a leaf port (along with a VLAN ID) to an EPG. After doing so, all the traffic received on this leaf port with the configured VLAN ID will be mapped to the EPG and the configured policy for this EPG will be enforced. The endpoints need not be directly connected to the ACI leaf port. They can be behind a layer 2 network as long as the VLAN associated with the EPG is enabled within the layer 2 network that connects the remote endpoint to the ACI fabric.

To statically assign port to an EPG, go to menu Tenant>Application Profiles>EPGs>Static Binding (Paths). Click the Action menu on the right side to start to assign port to an EPG. Figure 50 provides an example that assigns interface eth1/26 from the leaf node 101 along with VLAN 3 to EPG WEB.

NEW QUESTION # 356

An engineer must allow multiple external networks to communicate with internal ACI subnets. Which action should the engineer take to assign the prefix to the class ID of the external Endpoint Group?

- A. Enable an L3out with Shared Route Control Subnet.
- **B. Configure subnets with the External Subnets for External EPG flag enabled.**
- C. Enable the Export Route Control Subnet for the External Endpoint Group flag.
- D. Configure subnets with the Import Route Control Subnet flag enabled.

Answer: B

NEW QUESTION # 357

An engineer wants to monitor all configuration changes, threshold crossing, and link-state transitions in a Cisco ACI fabric. Which action must be taken to receive the required messages?

- A. Add Faults and Events to the monitor policy.
- B. Add Session Logs and Audit Logs to the monitor policy.
- C. Include Events and Session Logs in the Syslog source policy.
- **D. Include Audit Logs and Events in the Syslog source policy.**

Answer: D

NEW QUESTION # 358

A data center administrator is upgrading an ACI fabric. There are 3 APIC controllers in the fabric and all the servers are dual-homed to pairs of leaf switches configured in VPC mode. How should the fabric be upgraded to minimize possible traffic impact during the upgrade?

- A. Option B
- **B. Option A**
- C. Option C
- D. Option D

Answer: B

NEW QUESTION # 359

An engineer must limit management access to the Cisco ACI fabric that originates from a single subnet where the NOC operates. Access should be limited to SSH and HTTPS only. Where should the policy be configured on the Cisco APIC to meet the requirements?

- A. policy on the management VLAN
- **B. policy in the management tenant**
- C. ACL on the management interface of the APIC
- D. ACL on the console interface

Answer: B
