For Salesforce B2C-Commerce-Architect exam applicants who don't always have access to the internet, desktop-based practice exam software is appropriate. This Salesforce B2C-Commerce-Architect practice test software is compatible with Windows computers. Much like the web-based practice exam, our desktop practice test simulates the actual test. This Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) exam simulation software has the same features as our web-based practice exam, including most probable real exam questions, customizable practice test sessions, and quick result on how you did. To eliminate mistakes and exam anxiety, we advise using this Salesforce B2C-Commerce-Architect practice test software.

Salesforce B2C-Commerce-Architect Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Monitoring Troubleshooting: This topic equips the B2C Commerce Developer to evaluate and implement custom logging configurations using Log Center while leveraging other diagnostic tools. It emphasizes identifying and addressing performance issues like quota violations and service timeouts, as well as proactively adjusting systems for scalability and health.
Topic 2	<ul style="list-style-type: none"> Design Discovery: In this topic, the B2C Commerce Developer gains expertise in creating accurate technical specifications based on business requirements. It explores drafting complementary technical artifacts, reviewing implementation designs for scalability and gap analysis, and evaluating AppExchange solutions and API documentation. Additionally, it emphasizes analyzing integration points, data volume, and migration approaches while diagramming system architectures.
Topic 3	<ul style="list-style-type: none"> Launch: This topic prepares the B2C Commerce Developer to set up SEO-compliant aliases for site domains, locales, and currencies. It includes creating rollback plans, monitoring system health during site launches, defining data replication schedules, and supporting data migration processes.
Topic 4	<ul style="list-style-type: none"> Build: In this topic, the B2C Commerce Developer hones the ability to evaluate implementation processes to ensure alignment with business objectives. It includes validating best practices for secure, modular, and performant solutions, guiding teams in resolving complex issues, and supporting load testing to meet KPIs. The topic also covers defining processes for deploying cartridges and data to Salesforce environments.
Topic 5	<ul style="list-style-type: none"> Integrations and Customizations: This topic empowers the B2C Commerce Developer to identify and implement protocols like SOAP REST for secure integrations with third-party web services. It also covers defining approaches for legacy code integration and AppExchange solutions.

The Salesforce Certified B2C Commerce Architect certification also validates the candidate's ability to design and architect complex eCommerce solutions that meet the unique requirements of their clients. Successful candidates are able to lead and manage large-scale, multi-functional teams that are responsible for implementing B2C Commerce solutions. Salesforce Certified B2C Commerce Architect certification is ideal for professionals who are looking to advance their careers in the eCommerce domain and want to demonstrate their proficiency in the B2C Commerce platform.

Salesforce Certified B2C Commerce Architect Sample Questions (Q37-Q42):

NEW QUESTION # 37

Northern Trail Outfitters (NTO) wants to use Marketing Cloud to implement an Abandoned Cart Solution Workflow so that personalized messages are sent to shoppers who add items to their cart but abandon the B2C Commerce storefront. Which two options should a Solution Architect recommended to meet this requirement? Choose 2 answers

- A. Configure streaming updates for catalog importing, implement the Collect Tracking Code, and leverage Journey Builder to trigger an abandoned cart message.
- **B. Configure B2C Commerce catalog, product, order, and customer data feeds; implement Marketing Cloud collect.js and trigger an abandoned cart message through Journey Builder.**
- C. Configure B2C Commerce catalog, product, inventory, and customer data feeds; implement Marketing Cloud collect.js and trigger an abandoned cart message through
- **D. Configure streaming updates for catalog importing, implement Google Analytics tracking, and leverage Journey Builder to trigger an abandoned cart message.**

Answer: B,D

Explanation:

Journey Builder.

NEW QUESTION # 38

A B2C Commerce developer has recently completed a tax service link cartridge integration into a new SHU site. During review, the Architect notices the basket calculation hook is being run multiple times during a single tax call. What is the reason for the duplicate calculations being run?

- A. The LINK cartridge Is Included multiple times in the cartridge path.
- B. Thecheckout is designed to recursively refer to the same hook.
- C. There are multiple hook.js Wes referring to the same hook.
- **D. The tax cat is being called multiple times.**

Answer: D

NEW QUESTION # 39

A client has a single site with multiple domains, locales, and languages. After launch, there is a need for the client to perform offline maintenance. The client would like to show the same maintenance page for each locale. Which version of aliases,Json file below will accomplish this task?

- A.
- B.
- C.
- D.

Answer: D

Explanation:

Option C correctly addresses the requirement for showing the same maintenance page across multiple locales by having each different domain alias ("nto.eu", "nto.at", "nto.de") mapped to the same www domain ("www.nto.eu"). This setup allows all traffic, regardless of the original locale-specific domain, to be directed to a single, unified maintenance page hosted under the "www.nto.eu" domain. This ensures consistency in the maintenance message presented to all users, irrespective of their regional domain.

NEW QUESTION # 40

The development team is building a complex LINK cartridge for a hosted checkout solution. The provider's database is used as a single source of truth, but the information in the Basket on B2C Commerce side needs to be synchronized. This is implemented asynchronously the back end when the customers interact with the hosted checkout page and change their shipping/bidding details. As an Architect you have to advise the development team with how to implement the logging to ensure that there will be a mechanism available to allow troubleshooting in the case something goes wrong on production.

Which solution should the Architect suggest?

- A. Report info level message for the back-end asynchronous communication between both systems. Report all errors at error-level message.
- B. Get logger for cartridge-specific category. Report Info level message for the back-end asynchronous communication between both systems. Report all errors at error level message.
- C. Report debug level message for the back-end asynchronous communication between both systems. Report all errors at error-level message.
- D. Get logger for cartridge specific category. Report debug level message for the back end asynchronous communication between both systems. Report all errors at error level message.

Answer: B

NEW QUESTION # 41

The Home-Show route uses this middleware chain:

The developer added Home.js in another cartridge, which is before the original cartridge in the cartridge path, to extend that route but it does not have the middleware chain:

Assuming the code is correct on both functions, what is the expected result?

- A. The custom code executes and then the base code executes.
- B. The base code executes, but the custom code is ignored because the signature lines do not match.
- C. The base code executes and then the custom code executes.
- D. A RunTime error is thrown, "Error: Params do not match route".

Answer: D

NEW QUESTION # 42

.....
