

ARA-C01 Advanced Testing Engine, ARA-C01 Download Demo

2026 Latest LatestCram ARA-C01 PDF Dumps and ARA-C01 Exam Engine Free Share: https://drive.google.com/open?id=1DjVcgW3dx1MOK9Lp_Y0cwrBgtDQyn-ph

If you prefer to practice your ARA-C01 training materials on paper, then our ARA-C01 exam dumps will be your best choice. ARA-C01 PDF version is printable, and you can print them into hard one, and you can take them with you, and you can also study them anywhere and any place. Besides, ARA-C01 test materials are compiled by professional expert, therefore the quality can be guaranteed. You can obtain the download link and password for ARA-C01 exam materials within ten minutes, and if you don't receive, you can contact us, and we will solve this problem for you.

Snowflake ARA-C01 (SnowPro Advanced Architect Certification) Certification Exam is a certification program designed for IT professionals who want to demonstrate their expertise in architecting data solutions using Snowflake. ARA-C01 Exam is intended for individuals who have already obtained the SnowPro Core or SnowPro Advanced certification and have experience working with Snowflake as a data warehousing platform.

The Benefits of Using Desktop Snowflake ARA-C01 Practice Test Software

Dedication and solid preparation from a reliable Snowflake Campaign Certification ARA-C01 practice test material is needed to earn the Snowflake ARA-C01 credential. To do the successful and quick preparation, LatestCram actual Snowflake Campaign Certification ARA-C01 PDF Questions and practice tests should be your top priority. LatestCram is one of the few trusted brands that has been helping candidates crack the ARA-C01 test since its beginning. We have assisted hundreds of ARA-C01 certification applicants in clearing their Snowflake ARA-C01 exams. They all prepared with our valid, real, and updated SnowPro Advanced Architect Certification Expert ARA-C01 exam questions of LatestCram. Now they all have become Snowflake Campaign Certification ARA-C01 certified and currently working in reputed firms at well-paid job posts.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q69-Q74):

NEW QUESTION # 69

Which technique will efficiently ingest and consume semi-structured data for Snowflake data lake workloads?

- A. Schema-on-read
- B. Schema-on-write

- C. IDEF1X
- D. Information schema

Answer: A

Explanation:

Option C is the correct answer because schema-on-read is a technique that allows Snowflake to ingest and consume semi-structured data without requiring a predefined schema. Snowflake supports various semi-structured data formats such as JSON, Avro, ORC, Parquet, and XML, and provides native data types (ARRAY, OBJECT, and VARIANT) for storing them. Snowflake also provides native support for querying semi-structured data using SQL and dot notation. Schema-on-read enables Snowflake to query semi-structured data at the same speed as performing relational queries while preserving the flexibility of schema-on-read. Snowflake's near-instant elasticity rightsizes compute resources, and consumption-based pricing ensures you only pay for what you use.

Option A is incorrect because IDEF1X is a data modeling technique that defines the structure and constraints of relational data using diagrams and notations. IDEF1X is not suitable for ingesting and consuming semi-structured data, which does not have a fixed schema or structure.

Option B is incorrect because schema-on-write is a technique that requires defining a schema before loading and processing data. Schema-on-write is not efficient for ingesting and consuming semi-structured data, which may have varying or complex structures that are difficult to fit into a predefined schema. Schema-on-write also introduces additional overhead and complexity for data transformation and validation.

Option D is incorrect because information schema is a set of metadata views that provide information about the objects and privileges in a Snowflake database. Information schema is not a technique for ingesting and consuming semi-structured data, but rather a way of accessing metadata about the data.

NEW QUESTION # 70

A company has a table with that has corrupted data, named Dat

a. The company wants to recover the data as it was 5 minutes ago using cloning and Time Travel.

What command will accomplish this?

- A. `CREATE CLONE Recover_Data FROM Data AT(OFFSET => -60*5);`
- B. `CREATE CLONE TABLE Recover_Data FROM Data AT(OFFSET => -60*5);`
- C. `CREATE TABLE Recover_Data CLONE Data AT(TIME => -60*5);`
- **D. `CREATE TABLE Recover_Data CLONE Data AT(OFFSET => -60*5);`**

Answer: D

Explanation:

This is the correct command to create a clone of the table Data as it was 5 minutes ago using cloning and Time Travel. Cloning is a feature that allows creating a copy of a database, schema, table, or view without duplicating the data or metadata. Time Travel is a feature that enables accessing historical data (i.e. data that has been changed or deleted) at any point within a defined period. To create a clone of a table at a point in time in the past, the syntax is:

`CREATE TABLE <clone_name> CLONE <source_table> AT (OFFSET => <offset_in_seconds>);` The OFFSET parameter specifies the time difference in seconds from the present time. A negative value indicates a point in the past. For example, `-60*5` means 5 minutes ago. Alternatively, the `TIMESTAMP` parameter can be used to specify an exact timestamp in the past. The clone will contain the data as it existed in the source table at the specified point in time.

NEW QUESTION # 71

You have a large warehouse with auto suspend configured for 10 minutes. You submitted a query and it is going to run for more than 10 minutes.

What will happen to the query?

- **A. The query will continue to run**
- B. The query will go on a hold state

- C. The query will automatically cancelled after 10 minutes

Answer: A

NEW QUESTION # 72

What Snowflake system functions are used to view and or monitor the clustering metadata for a table? (Select TWO).

- **A. SYSTEMSCLUSTERING_INFORMATION**
- B. SYSTEMSCLUSTERING_RATIO
- **C. SYSTEMSCLUSTERING_DEPTH**
- D. SYSTEMSTABLE_CLUSTERING
- E. SYSTEMSCLUSTERING

Answer: A,C

Explanation:

The Snowflake system functions used to view and monitor the clustering metadata for a table are:

SYSTEM\$CLUSTERING_INFORMATION

SYSTEM\$CLUSTERING_DEPTH

Comprehensive But Short Explanation:

The SYSTEM\$CLUSTERING_INFORMATION function in Snowflake returns a variety of clustering information for a specified table. This information includes the average clustering depth, total number of micro-partitions, total constant partition count, average overlaps, average depth, and a partition depth histogram. This function allows you to specify either one or multiple columns for which the clustering information is returned, and it returns this data in JSON format.

The SYSTEM\$CLUSTERING_DEPTH function computes the average depth of a table based on specified columns or the clustering key defined for the table. A lower average depth indicates that the table is better clustered with respect to the specified columns. This function also allows specifying columns to calculate the depth, and the values need to be enclosed in single quotes.

SYSTEM\$CLUSTERING_INFORMATION: Snowflake Documentation

SYSTEM\$CLUSTERING_DEPTH: Snowflake Documentation

NEW QUESTION # 73

When a database gets cloned, what accesses are replicated

- A. Only the child object access
- **B. All objects in the database and their child objects(schemas, tables etc)**
- C. No access gets replicated
- D. Only the data base object access

Answer: B

NEW QUESTION # 74

.....

With our ARA-C01 study materials, you can make full use of those time originally spent in waiting for the delivery of exam files so that you can get preparations as early as possible. There is why our ARA-C01 learning prep exam is well received by the general public. I believe if you are full aware of the benefits the immediate download of our PDF study exam brings to you, you will choose our ARA-C01 actual study guide. Just come and buy it! You will be surprised about our high quality.
