We can assure you that you can pass the exam as well as getting the related certification in a breeze with the guidance of our Project-Management test torrent.

NCARB ARE 5.0 Project Management (PjM) Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

What is the primary purpose of a punch list?

- A. To summarize project milestones
- B. To schedule subcontractors
- C. To list all contract documents
- **D. To identify incomplete or deficient work before final payment**

Answer: D

Explanation:

A punch list is a document prepared near project completion that identifies incomplete or nonconforming work requiring correction before final payment. It ensures all parties agree on outstanding items and facilitates project closeout. Punch lists are a key concept in ARE 5.0 PjM related to construction phase closeout procedures.

NEW QUESTION # 38

An architect is working on a design-build project for a large skyscraper. The architect has completed a conceptual design, finalized the contracts, and hired consultants. The schematic design phase is set to begin in one week.

Which items or tasks are important for the architect to complete during this time? Check the three that apply.

- A. Ask consultants to review information and provide input
- B. Create a project schedule
- C. Prepare building permit application
- D. Send consultants project constraints
- E. Coordinate the curtain wall detailing with the envelope
- F. Identify FF&E vendors

Answer: A,B,D

Explanation:

Verified Answer

At the outset of schematic design, the architect must coordinate with consultants and communicate constraints and expectations to keep the project aligned with goals. Building permits are typically addressed in the construction documents phase. FF&E coordination and curtain wall detailing occur later in design development and construction documents.

Coordination and planning at schematic design are crucial to project integration.

NEW QUESTION # 39

According to AIA Document A201, who is responsible for obtaining permits and licenses required for the project?

- A. Architect
- B. Owner
- C. Construction Manager
- D. Contractor

Answer: B

Explanation:

Per AIA A201 General Conditions, the owner is responsible for obtaining and paying for permits and licenses necessary for the project unless otherwise stated. The contractor typically assists by providing necessary information and submitting documents required by local authorities but the ultimate responsibility lies with the owner. The architect facilitates compliance by producing code-compliant documents but does not directly secure permits. This responsibility division is a key concept in ARE 5.0 PjM relating to roles and obligations defined in contract documents.

NEW QUESTION # 40

After construction begins, an owner asks the architect to select a different roof material. The architect wants to manage the risk associated with this change.

- A. Write a memorandum to the owner to describe the owner's request for a change.
- B. Contact roofing suppliers to request product specifications to select a replacement.
- C. Contact the contractor to request a change order.
- D. Place a note in the project file to detail roof options and the final decision.

Answer: A

Explanation:

Verified Answer

The correct risk management approach is to document the owner's request clearly before taking any action. A written memorandum becomes part of the formal record and clarifies scope, timing, and potential cost implications. This protects the architect from misinterpretation or dispute.

Verbal or informal changes are a legal and professional risk.

Once documented, changes can proceed via appropriate channels (change order or construction change directive).

Reference: AIA B101 §4.2.2; A201 §7.3

NCARB ARE 5.0 Handbook - PjM Content Area 5: Project Execution

NEW QUESTION # 41

What is the best method for an architect to reduce liability related to unknown site conditions?

- [illegible]
