

Top SAP Latest C_S43_2601 Test Vce & Authoritative TopExamCollection - Leading Offer in Qualification Exams

If you try on our C_S43_2601 exam braindumps, you will be very satisfied with its content and design. Trust me, you can't find anything better than our C_S43_2601 study materials. If you think I am exaggerating, you can try it for yourself. We can provide you with a free trial version. If you try another version and feel that our C_S43_2601 practice quiz are not bad, you can apply for another version of the learning materials again and choose the version that suits you best!

As for preparation for an exam, some necessary C_S43_2601 Study Guide will be need for practicing, but we may also have the concern that if we buy the C_S43_2601 study guide, whether the safety of the personal information can be ensured. The answer is yes, we respect the privacy of our customers. Your personal information will be protected well. We also won't send the junk mail to bother you. Choose us, and you will be free of many bothers.

Study Materials SAP C_S43_2601 Review, C_S43_2601 Valid Exam Cram

If you want to know our C_S43_2601 exam questions before your coming exam, you can just visit our website. And it is easy and convenient to free download the demos of our C_S43_2601 study guide, you just need to click on it. Then you will find that all points of the C_S43_2601 Learning Materials are predominantly related with the exam ahead of you. Every page is full of well-turned words for your reference related wholly with the C_S43_2601 training prep.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Maintenance Order with Checklist
- * Display a Maintenance Order with automatically generated Object List and Checklist.
- * Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

- * Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

* Initial Screen :

* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).

* Press Enter .

* Enter Header and Location Data :

* Functional Location : Enter 48-01-PRD-01-03-HD .

* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).

* Assign the Task List :

* Go to the Operations tab or find the task list assignment section.

* General Maintenance Task List : Enter A / T-PMCLEN / 1 .

* Press Enter to validate.

* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the

"Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

* Display the Order : Use transaction code IW33 and enter the order number you just created.

* Verify the Object List :

* Navigate to the Object List tab.

* You should see the equipment or functional location listed here with a link to the checklist.

* Verify the Checklist :

* Look for a button or tab labeled Checklists or Inspection Lot within the order.

* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 11

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

□ Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client

400). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

* System : T41

* Client : 400

* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

* Password : Welcome1

Connection Methods:

* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

□

NEW QUESTION # 12

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

* Configure and create Functional Locations

* Create, serialize and install Equipment

* Create Functional Location master record ZZ0##-01 and save it. Use the following information:

□ * Create Equipment master record EQUI-## and save it. Use the following information:

□ * Serialize the just created Equipment master record EQUI-## . Use the following data:

- * Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

* Access the Transaction : Use transaction code IL01 (Create Functional Location).

* Enter Initial Data :

* Functional Location : ZZ048-01.

* Structure Indicator : ZZ48.

* Functional Location Category : T.

* Press Enter .

□ * Enter General Data :

* Description : Production Line Z48.

* Enter Location and Organization Data :

* Maintenance Plant : 1020.

* Cost Center : 4110.

* Planning Plant : 1020.

* Planner Group : Z48.

* Main WorkCtr : T-ME48.

* Work Center Plant : 1010.

* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

□ Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

* Access the Transaction : Use transaction code IE01 (Create Equipment).

* Enter Initial Data :

* Equipment : EQUI-48.

* Equipment Category : T.

* Press Enter .

□ * Enter General Data :

* Description : Drive Motor GR48.

* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

□ Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.

* Navigate to Serial Data : Go to the SerData (Serial Data) tab.

* Enter Serialization Data :

* Material : T-PM8000.

* Serial Number : EQUI-48.

* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

□ Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

* Modify Installation Location :

* Click on the Structure tab.

* Find the FunctLoc field.

* Enter the location: 00-01-ASS-02.

* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

NEW QUESTION # 13

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

- * Initiate and screen a Maintenance Notification
- * Plan Maintenance Order and send it for approval
- * Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

- * Screen and accept the just created Maintenance Notification.
- * Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

- * Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
- * Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request).
- * Enter the Following Data :
- * Technical Object : T-PB48
- * Description : Defective pump (phase-based)
- * Current Location : Production Line 1
- * Detection Method : Continuous Condition Monitoring
- * Operational Effect : Production restricted
- * Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

- * Access the Fiori App : Open Screen Maintenance Requests .
- * Locate Your Notification : Find the notification you just created for T-PB48.
- * Perform Screening :
- * Review the details to ensure they are complete.
- * Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

- * Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
- * Enter Planning Data :
- * Technical Object : T-PB48
- * Operation 0010 Description : Repair damage
- * Operation 0010 Work : 2 h
- * Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is

"Waiting for Approval"

NEW QUESTION # 14

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 15

.....

This SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) certification is a valuable credential that is designed to validate your expertise all over the world. After successfully competition of C_S43_2601 exam you can gain several personal and professional benefits. All these SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) certification exam benefits will not only prove your skills but also assist you to put your career on the right track and achieve your career objectives in a short time period.
