

Pass Guaranteed Quiz The Open Group - OGEA-103 - TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam First-grade Test Pass4sure

BONUS!!! Download part of PracticeDump OGEA-103 dumps for free: https://drive.google.com/open?id=15FcQ_rsGRJALZiW4DNbU7raa-byZuhu

There are many users that are using TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) exam questions and rated it as one of the best in the market. The customers are pleased with TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) exam questions and all of them have passed the TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) certification exam on the very first try.

On the one hand, the software version can simulate the real examination for you and you can download our study materials on more than one computer with the software version of our study materials. On the other hand, you can finish practicing all the contents in our OGEA-103 practice materials within 20 to 30 hours. What's more, during the whole year after purchasing, you will get the latest version of our study materials for free. You can see it is clear that there are only benefits for you to buy our OGEA-103 learning guide, so why not just have a try right now?

>> OGEA-103 Test Pass4sure <<

Correct OGEA-103 Test Pass4sure & Leader in Qualification Exams & Trustable OGEA-103: TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam

The actual TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) exam environment that the practice exam creates is beneficial to counter TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) exam anxiety. Tracking and reporting features of this OGEA-103 practice test enables you to assess and enhance your progress. The third format of PracticeDump product is the desktop TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) practice exam software. It is an ideal format for those users who don't have access to the internet all the time. After installing the software on Windows computers, one will not require the internet. The desktop OGEA-103 practice test software specifies the web-based version.

The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Consider the following ADM phases objectives.

	Objective
1	Ensure that the business value and cost of work packages and Transition Architectures is understood by key stakeholders
2	Ensure conformance with the Target Architecture by implementation projects
3	Ensure that the architecture development cycle is maintained
4	Ensure that the Architecture Governance Framework is executed

Which phase does each objective match?

- A. 1F-2G-3H-4H
- B. 1H-2F-3F-4G
- C. 1F-2G-3G-4H
- D. 1G-2H-3H-4F

Answer: C

Explanation:

Explanation

1F: To define an Implementation and Migration Strategy that will achieve an orderly transition from the Baseline to Target Architectures
2G: To perform appropriate governance functions while the solution is being implemented
3G: To ensure conformance with the Target Architecture by implementation projects
4H: To establish procedures for continual monitoring and assessment of the performance of the solution in operation
Reference: The TOGAF Standard | The Open Group Website, Section 3.2 ADM Phases.

NEW QUESTION # 43

Which statement about Requirements Management is most correct?

- A. Stakeholder requirements are captured once in Phase A and managed throughout the ADM cycle
- B. Requirements Management is a step of all ADM Phases
- C. Requirements Management and stakeholder engagement are placed at the center of architecture development
- D. The purpose of Requirements Management is to process change requests

Answer: C

Explanation:

Explanation

This statement about Requirements Management is most correct because it reflects the central role of Requirements Management and stakeholder engagement in the ADM cycle. Requirements Management is not a step of all ADM Phases, but rather an ongoing process that ensures that all relevant requirements are elicited, analyzed, prioritized, and addressed throughout the architecture development and transition. Stakeholder engagement is also a continuous activity that involves identifying, communicating, and managing stakeholder expectations and concerns. Reference: The TOGAF Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

NEW QUESTION # 44

What is an objective of the ADM Preliminary Phase?

- A. To obtain approval for the Statement of Architecture Work
- B. To develop a vision of the business value to be delivered by the proposed enterprise architecture
- C. To select and implement tools to support the Architecture Capability
- D. To create the initial version of the Architecture Roadmap

Answer: C

Explanation:

Explanation

The Preliminary Phase is the preparatory phase of the Architecture Development Method (ADM) cycle, which sets the context and direction for the architecture work. One of the objectives of this phase is to select and implement tools to support the Architecture Capability, which is the ability of an organization to perform enterprise architecture effectively and efficiently. Tools can include software applications, methods, techniques, standards, and frameworks that assist the architecture development and governance processes. The selection and implementation of tools should be based on the requirements and constraints of the organization, and the alignment with the Architecture Principles and the Architecture Vision³ References: 3: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 6: Preliminary Phase : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 45: Establishing and Maintaining an Enterprise Architecture Capability : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 46: Tools for Architecture Development

NEW QUESTION # 45

Please read this scenario prior to answering the question

Your role is that of a consultant to the Lead Enterprise Architect to an international supplier of engineering services and automated manufacturing systems. It has three manufacturing plants where it assembles both standard and customized products for industrial production automation. Each of these plants has been operating its own planning and production scheduling systems, as well as applications and control systems that drive the automated production line.

The Enterprise Architecture department has been operating for several years and has mature, well-developed architecture governance and development processes that are based on the TOGAF Standard. The CIO sponsors the Enterprise Architecture. During a recent management meeting, a senior Vice-President highlighted an interview where a competitor company's CIO is reported as saying that their production efficiency had been improved by replacing multiple planning and scheduling systems with a common Enterprise Resource Planning (ERP) system located in a central data center. Some discussion followed, with the CIO responding that the situations are not comparable, and the current architecture is already optimized.

In response, the Architecture Board approved a Request for Architecture Work covering the investigations to determine if such an architecture transformation would lead to improvements in efficiency. You have been assigned to support the architecture team working on this project.

A well-known concern of the plant managers is about the security and reliability of driving their planning and production scheduling from a remote centralized system. Any chosen system would also need to support the current supply chain network consisting of local partners at each of the plants.

Refer to the scenario

You have been asked to explain how you will initiate the architecture project.

Based on the TOGAF Standard, which of the following is the best answer?

- A. You would develop baseline and target Architectures for each of the manufacturing plants, ensuring that the views corresponding to selected viewpoints address key concerns of the stakeholders. A business case, together with performance metrics and measures should be defined to ensure the architecture meets the business needs. A consolidated gap analysis between the architectures will then validate the approach and determine the capability increments needed to achieve the target state.
- B. You would conduct a pilot project that will enable vendors to demonstrate potential off-the-shelf solutions that address the concerns of the stakeholders. Running a pilot project will save time and money later in the process. Based on the findings of that pilot project, a complete set of requirements can then be developed that will drive the evolution of the architecture. Once the requirements are completed, a formal stakeholder review should be held, and permission sought to proceed to develop the target architecture.
- C. You would hold a series of interviews at each of the manufacturing plants using the business scenarios technique. This will allow you to understand the systems and integrations with local partners. You would use stakeholder analysis to identify key players in the engagement, and to understand their concerns. You will then identify and document the key high-level stakeholder requirements for the architecture. You will then generate high level definitions of the baseline and target architectures.
- D. You would research vendor literature and conduct a series of briefings with vendors that are on the current approved supplier list. Based on the findings from the research, you would define a preliminary Architecture Vision including summary views, high-level requirements, and high-level definitions of the baseline and target environments from a business, information systems, and technology perspective. You would then use that to build consensus among the key stakeholders.

Answer: C

Explanation:

The best answer is C. You would hold a series of interviews at each of the manufacturing plants using the business scenarios technique. This will allow you to understand the systems and integrations with local partners. You would use stakeholder analysis to identify key players in the engagement, and to understand their concerns. You will then identify and document the key high-level stakeholder requirements for the architecture. You will then generate high level definitions of the baseline and target architectures.

This answer is based on the TOGAF standard, which recommends the following steps to initiate the architecture project¹:

- * Establish the architecture project
- * Identify stakeholders, concerns, and business requirements
- * Confirm and elaborate business goals, business drivers, and constraints
- * Evaluate business capabilities
- * Assess readiness for business transformation
- * Define scope
- * Confirm and elaborate Architecture Principles, including business principles
- * Develop Architecture Vision
- * Define the Target Architecture value propositions and KPIs
- * Identify the business transformation risks and mitigation activities
- * Secure stakeholder and sponsor approval

The answer C covers most of these steps, by using the business scenarios technique to elicit and validate the business requirements, goals, drivers, and constraints, as well as the current and future states of the architecture². The answer C also uses stakeholder analysis to identify and engage the key stakeholders, and to address their concerns and expectations³. The answer C also generates high level definitions of the baseline and target architectures, which can be used to develop the Architecture Vision and the value propositions⁴.

The other answers are not the best approach for architecture development, because:

- * Answer A focuses on researching vendor literature and conducting briefings with vendors, which is not the best way to understand the business needs and the current situation of the enterprise. Answer A also defines a preliminary Architecture Vision without involving the stakeholders or validating the requirements, which may lead to misalignment and lack of consensus.
- * Answer B conducts a pilot project that will enable vendors to demonstrate potential solutions, which is premature and costly at this stage of the architecture project. Answer B also does not address the stakeholder concerns or the current systems and integrations, which may result in gaps and risks.

Answer B also develops the requirements after the pilot project, which may not reflect the actual business needs and goals.

- * Answer D develops baseline and target architectures for each of the manufacturing plants, which may not consider the enterprise-wide perspective and the potential benefits of a common ERP system

Answer D also does not involve the stakeholders or address their concerns, which may result in resistance and conflict. Answer D also does not define the business case or the performance metrics, which are essential for demonstrating the value and feasibility of the architecture.

NEW QUESTION # 46

When considering the scope of an architecture, what dimension considers to what level of detail the architecting effort should go?

- A. Breadth
- B. Project
- C. Depth
- D. Architecture Domains

Answer: C

Explanation:

The scope of an architecture is the extent and level of detail of the architecture work. The scope of an architecture can be defined along four dimensions: project, breadth, depth, and architecture domains. The project dimension considers the boundaries and objectives of the architecture project, such as the time frame, budget, resources, and deliverables. The breadth dimension considers the coverage and completeness of the architecture across the enterprise, such as the organizational units, business functions, processes, and locations. The depth dimension considers the level of detail and specificity of the architecture, such as the granularity, abstraction, and precision of the architectural elements and relationships. The architecture domains dimension considers the aspects or segments of the architecture, such as the business, data, application, and technology domains.

Therefore, the depth dimension is the one that considers to what level of detail the architecting effort should go.
