Getting PSE-Strata-Pro-24 exam certified is not easy. To pass the exam, one must put in a tremendous amount of effort, resolve, and dedication. One of the most dependable sites, Itcerttest provides students with accurate, dependable, and simple Palo Alto Networks PSE-Strata-Pro-24 Dumps to assure their success on the first attempt. For those looking to pass the PSE-Strata-Pro-24 exam certificate on their first attempt, Itcerttest provides the full package, which includes all exam dumps that follow the syllabus.

Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.
Topic 2	<ul style="list-style-type: none">• Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.
Topic 3	<ul style="list-style-type: none">• Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.
Topic 4	<ul style="list-style-type: none">• Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.

PSE-Strata-Pro-24 Valid Exam Notes - Reliable PSE-Strata-Pro-24 Dumps Questions

Our PSE-Strata-Pro-24 learning question can provide you with a comprehensive service beyond your imagination. PSE-Strata-Pro-24 exam guide has a first-class service team to provide you with 24-hour efficient online services. Our team includes industry experts & professional personnel and after-sales service personnel, etc. Industry experts hired by PSE-Strata-Pro-24 Exam Guide helps you to formulate a perfect learning system, and to predict the direction of the exam, and make your learning easy and efficient. Our staff can help you solve the problems that PSE-Strata-Pro-24 test prep has in the process of installation and download.

Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which two methods are valid ways to populate user-to-IP mappings? (Choose two.)

- A. User-ID
- B. Captive portal
- C. SCP log ingestion
- D. XML API

Answer: B,D

Explanation:

Step 1: Understanding User-to-IP Mappings

User-to-IP mappings are the foundation of User-ID, a core feature of Strata Hardware Firewalls (e.g., PA-400 Series, PA-5400 Series). These mappings link a user's identity (e.g., username) to their device's IP address, enabling policy enforcement based on user identity rather than just IP. Palo Alto Networks supports multiple methods to populate these mappings, depending on the network environment and authentication mechanisms.

* Purpose: Allows the firewall to apply user-based policies, monitor user activity, and generate user-specific logs.

* Strata Context: On a PA-5445, User-ID integrates with App-ID and security subscriptions to enforce granular access control.

NEW QUESTION # 56

Regarding APIs, a customer RFP states: "The vendor's firewall solution must provide an API with an enforcement mechanism to deactivate API keys after two hours." How should the response address this clause?

- A. Yes - This is the default setting for API keys.
- B. No - The PAN-OS XML API does not support keys.
- C. No - The API keys can be made, but there is no method to deactivate them based on time.
- D. Yes - The default setting must be changed from no limit to 120 minutes.

Answer: D

Explanation:

Palo Alto Networks' PAN-OS supports API keys for authentication when interacting with the firewall's RESTful and XML-based APIs. By default, API keys do not have an expiration time set, but the expiration time for API keys can be configured by an administrator to meet specific requirements, such as a time-based deactivation after two hours. This is particularly useful for compliance and security purposes, where API keys should not remain active indefinitely.

Here's an evaluation of the options:

* Option A: This is incorrect because the default setting for API keys does not include an expiration time. By default, API keys are valid indefinitely unless explicitly configured otherwise.

* Option B: This is incorrect because PAN-OS fully supports API keys. The API keys are integral to managing access to the firewall's APIs and provide a secure method for authentication.

* Option C: This is incorrect because PAN-OS does support API key expiration when explicitly configured. While the default is "no expiration," the feature to configure an expiration time (e.g., 2 hours) is available.

* Option D (Correct): The correct response to the RFP clause is that the default API key settings need to be modified to set the expiration time to 120 minutes (2 hours). This aligns with the customer requirement to enforce API key deactivation based on time. Administrators can configure this using the PAN-OS management interface or the CLI.

How to Configure API Key Expiration (Steps):

* Access the Web Interface or CLI on the firewall.

- * Navigate to Device > Management > API Key Lifetime Settings (on the GUI).
- * Set the desired expiration time (e.g., 120 minutes).
- * Alternatively, use the CLI to configure the API key expiration:

```
set deviceconfig system api-key-expiry <time-in-minutes>
commit
```
- * Verify the configuration using the show command or by testing API calls to ensure the key expires after the set duration.

NEW QUESTION # 57

What are two methods that a NGFW uses to determine if submitted credentials are valid corporate credentials? (Choose two.)

- A. WMI client probing
- B. Domain credential filter
- C. Group mapping
- D. LDAP query

Answer: B,C

NEW QUESTION # 58

As a team plans for a meeting with a new customer in one week, the account manager prepares to pitch Zero Trust. The notes provided to the systems engineer (SE) in preparation for the meeting read: "Customer is struggling with security as they move to cloud apps and remote users." What should the SE recommend to the team in preparation for the meeting?

- A. Lead with the account manager pitching Zero Trust with the aim of convincing the customer that the team's approach meets their needs.
- B. Design discovery questions to validate customer challenges with identity, devices, data, and access for applications and remote users.
- C. Lead with a product demonstration of GlobalProtect connecting to an NGFW and Prisma Access, and have SaaS security enabled.
- D. Guide the account manager into recommending Prisma SASE at the customer meeting to solve the issues raised.

Answer: B

Explanation:

When preparing for a customer meeting, it's important to understand their specific challenges and align solutions accordingly. The notes suggest that the customer is facing difficulties securing their cloud apps and remote users, which are core areas addressed by Palo Alto Networks' Zero Trust and SASE solutions.

However, jumping directly into a pitch or product demonstration without validating the customer's specific challenges may fail to build trust or fully address their needs.

* Option A: Leading with a pre-structured pitch about Zero Trust principles may not resonate with the customer if their challenges are not fully understood first. The team needs to gather insights into the customer's security pain points before presenting a solution.

* Option B (Correct): Discovery questions are a critical step in the sales process, especially when addressing complex topics like Zero Trust. By designing targeted questions about the customer's challenges with identity, devices, data, and access, the SE can identify specific pain points. These insights can then be used to tailor a Zero Trust strategy that directly addresses the customer's concerns.

This approach ensures the meeting is customer-focused and demonstrates that the SE understands their unique needs.

* Option C: While a product demonstration of GlobalProtect, Prisma Access, and SaaS security is valuable, it should come after discovery. Presenting products prematurely may seem like a generic sales pitch and could fail to address the customer's actual challenges.

* Option D: Prisma SASE is an excellent solution for addressing cloud security and remote user challenges, but recommending it without first understanding the customer's specific needs may undermine trust. This step should follow after discovery and validation of the customer's pain points.

Examples of Discovery Questions:

- * What are your primary security challenges with remote users and cloud applications?
- * Are you currently able to enforce consistent security policies across your hybrid environment?
- * How do you handle identity verification and access control for remote users?
- * What level of visibility do you have into traffic to and from your cloud applications?
