

# 212-82 PDF Demo - 212-82 Prüfungsaufgaben

Laden Sie die neuesten DeutschPrüfung 212-82 PDF-Versionen von Prüfungsfragen kostenlos von Google Drive herunter: [https://drive.google.com/open?id=1kjs8k72HKd1S\\_zToiCzb-6Y81O9vEY55](https://drive.google.com/open?id=1kjs8k72HKd1S_zToiCzb-6Y81O9vEY55)

Wir DeutschPrüfung bietet Ihnen die Prüfungsfragen und Antworten zur ECCouncil 212-82 von höchster Qualität, damit Sie viel näher von Ihrem Erfolg sind. Wenn Sie noch ein paar Sorgen haben, können Sie die 212-82 Demo durch die Webseite DeutschPrüfung herunterladen. Hier versprechen wir Ihnen, dass wir Ihnen noch einjähriger Aktualisierung kostenlos anbieten werden, nachdem Sie die Prüfungsfragen und Antworten zur ECCouncil 212-82 gekauft haben.

Seit langem bieten wir DeutschPrüfung vielfältige neueste Prüfungsunterlagen zur ECCouncil 212-82 Zertifizierungsprüfung. Zum Beispiel sind ECCouncil 212-82 Dumps von DeutschPrüfung laut der neuesten IT-Zertifizierungsprüfung geschaffen. Wir können Ihnen die neusten Informationen über die ECCouncil 212-82 Prüfungen anbieten. Die Unterlagen beinhalten die veränderten Informationen und die neue Prüfungsfragensformen. So wenn Sie IT-Zertifizierungsprüfung ablegen wollen, sollen Sie am besten die Unterlagen von DeutschPrüfung. Damit können Sie sich besser auf die ECCouncil 212-82 Prüfungen vorbereiten.

## 212-82 Prüfungsaufgaben - 212-82 Vorbereitung

Wollen Sie den Plan machen, dass Sie ECCouncil 212-82 Zertifizierungsprüfung ablegen, um Ihre Fähigkeit zu entwickeln. Wenn Sie ECCouncil 212-82 Prüfung ablegen, ob Sie die geeigneten Lernhilfe finden? Und welche Unterlage sind wertvoll? Haben Sie ECCouncil 212-82 Dumps gewählt? Wenn ja, sorgen Sie sich bitte nicht um den Misserfolg.

## ECCouncil Certified Cybersecurity Technician 212-82 Prüfungsfragen mit Lösungen (Q23-Q28):

### 23. Frage

A startup firm contains various devices connected to a wireless network across the floor. An AP with Internet connectivity is placed in a corner to allow wireless communication between devices. To support new devices connected to the network beyond the APS range, an administrator used a network device that extended the signals of the wireless AP and transmitted it to uncovered area, identify the network component employed by the administrator to extend signals in this scenario.

- A. Wireless router
- **B. Wireless repeater**
- C. wireless modem
- D. Wireless bridge

**Antwort: B**

Begründung:

Wireless repeater is the network component employed by the administrator to extend signals in this scenario.

A wireless network is a type of network that uses radio waves or infrared signals to transmit data between devices without using cables or wires. A wireless network can consist of various components, such as wireless access points (APs), wireless routers, wireless adapters, wireless bridges, wireless repeaters, etc. A wireless repeater is a network component that extends the range or coverage of a wireless signal by receiving it from an AP or another repeater and retransmitting it to another area. A wireless repeater can be used to support new devices connected to the network beyond the AP's range. In the scenario, a startup firm contains various devices connected to a wireless network across the floor. An AP with internet connectivity is placed in a corner to allow wireless communication between devices. To support new devices connected to the network beyond the AP's range, an administrator used a network component that extended the signals of the wireless AP and transmitted it to the uncovered area. This means that he used a wireless repeater for this purpose. A wireless bridge is a network component that connects two or more wired or wireless networks or segments together. A wireless bridge can be used to expand the network or share resources between networks. A wireless modem is a network component that modulates and demodulates wireless signals to enable data transmission over a network. A wireless modem can be used to provide internet access to devices via a cellular network or a satellite network. A wireless router is a network component that performs the functions of both a wireless AP and a router. A wireless router can be used to create a wireless network and connect it to another network, such as the internet.

#### 24. Frage

Ayden works from home on his company's laptop. During working hours, he received an antivirus software update notification on his laptop. Ayden clicked on the update button; however, the system restricted the update and displayed a message stating that the update could only be performed by authorized personnel. Which of the following PCI-DSS requirements is demonstrated in this scenario?

- A. PCI-DSS requirement no 5.3
- B. PCI-DSS requirement no 5.1
- C. PCI-DSS requirement no 1.3.2
- D. PCI-DSS requirement no 1.3.1

**Antwort: A**

Begründung:

PCI-DSS requirement no 5.3 is the PCI-DSS requirement that is demonstrated in this scenario.

PCI-DSS (Payment Card Industry Data Security Standard) is a set of standards that applies to entities that store, process, or transmit payment card information, such as merchants, service providers, or payment processors. PCI-DSS requires them to protect cardholder data from unauthorized access, use, or disclosure. PCI-DSS consists of 12 requirements that are grouped into six categories: build and maintain a secure network and systems, protect cardholder data, maintain a vulnerability management program, implement strong access control measures, regularly monitor and test networks, and maintain an information security policy. PCI-DSS requirement no 5.3 is part of the category "maintain a vulnerability management program" and states that antivirus mechanisms must be actively running and cannot be disabled or altered by users, unless specifically authorized by management on a case-by-case basis for a limited time period. In the scenario, Ayden works from home on his company's laptop. During working hours, he received an antivirus software update notification on his laptop. Ayden clicked on the update button; however, the system restricted the update and displayed a message stating that the update could only be performed by authorized personnel. This means that his company's laptop has an antivirus mechanism that is actively running and cannot be disabled or altered by users, which demonstrates PCI-DSS requirement no 5.3.

#### 25. Frage

An FTP server has been hosted in one of the machines in the network. Using Cain and Abel the attacker was able to poison the machine and fetch the FTP credentials used by the admin. You're given a task to validate the credentials that were stolen using Cain and Abel and read the file flag.txt

- A. hat@red
- B. red@hat
- C. blue@hat
- D. white@hat

**Antwort: A**

Begründung:

hat@red is the FTP credential that was stolen using Cain and Abel in the above scenario. FTP (File Transfer Protocol) is a protocol that allows transferring files between a client and a server over a network. FTP requires a username and a password to authenticate

the client and grant access to the server. Cain and Abel is a tool that can perform various network attacks, such as ARP poisoning, password cracking, sniffing, etc. Cain and Abel can poison the machine and fetch the FTP credentials used by the admin by intercepting and analyzing the network traffic. To validate the credentials that were stolen using Cain and Abel and read the file flag.txt, one has to follow these steps:

Navigate to the Documents folder of Attacker-1 machine.

Double-click on Cain.exe file to launch Cain and Abel tool.

Click on Sniffer tab.

Click on Start/Stop Sniffer icon.

Click on Configure icon.

Select the network adapter and click on OK button.

Click on + icon to add hosts to scan.

Select All hosts in my subnet option and click on OK button.

Wait for the hosts to appear in the list.

Right-click on 20.20.10.26 (FTP server) and select Resolve Host Name option.

Note down the host name as ftpserver.movieabc.com

Click on Passwords tab.

Click on + icon to add items to list.

Select Network Passwords option.

Select FTP option from Protocol drop-down list.

Click on OK button.

Wait for the FTP credentials to appear in the list.

Note down the username as hat and the password as red

Open a web browser and type ftp://hat:red@ftpserver.movieabc.com

Press Enter key to access the FTP server using the stolen credentials.

Navigate to flag.txt file and open it.

Read the file content.

## 26. Frage

A software company develops new software products by following the best practices for secure application development. Dawson, a software analyst, is responsible for checking the performance of applications in the client's network to determine any issue faced by end users while accessing the application.

Which of the following tiers of the secure application development lifecycle involves checking the application performance?

- A. Quality assurance (QA)
- B. Staging
- C. Development
- **D. Testing**

### Antwort: D

#### Begründung:

Testing is the tier of the secure application development lifecycle that involves checking the application performance in the above scenario. Secure application development is a process that involves designing, developing, deploying, and maintaining software applications that are secure and resilient to threats and attacks. Secure application development can be based on various models or frameworks, such as SDLC (Software Development Life Cycle), OWASP (Open Web Application Security Project), etc. Secure application development consists of various tiers or stages that perform different tasks or roles. Testing is a tier of the secure application development lifecycle that involves verifying and validating the functionality and security of software applications before releasing them to end users. Testing can include various types of tests, such as unit testing, integration testing, system testing, performance testing, security testing, etc. Testing can be used to check the application performance and identify any errors, bugs, or vulnerabilities in the software applications. In the scenario, a software company develops new software products by following the best practices for secure application development. Dawson, a software analyst, is responsible for checking the performance of applications in the client's network to determine any issue faced by end users while accessing the application. This means that he performs testing for this purpose. Development is a tier of the secure application development lifecycle that involves creating and coding software applications according to the design and specifications. Staging is a tier of the secure application development lifecycle that involves deploying software applications to a simulated or pre-production environment for testing or evaluation purposes. Quality assurance (QA) is a tier of the secure application development lifecycle that involves ensuring that software applications meet the quality standards and expectations of end users and stakeholders.

## 27. Frage

Elliott, a security professional, was tasked with implementing and deploying firewalls in the corporate network of an organization. After planning and deploying firewalls in the network, Elliott monitored the firewall logs to detect evolving threats and attacks; this helped in ensuring firewall security and addressing network issues beforehand. In which of the following phases of firewall implementation and deployment did Elliott monitor the firewall logs?

- A. Deploying
- B. Configuring
- **C. Managing and maintaining**
- D. Testing

**Antwort: C**

Begründung:

Managing and maintaining is the phase of firewall implementation and deployment in which Elliott monitored the firewall logs in the above scenario. A firewall is a system or device that controls and filters the incoming and outgoing traffic between different networks or systems based on predefined rules or policies. A firewall can be used to protect a network or system from unauthorized access, use, disclosure, modification, or destruction. Firewall implementation and deployment is a process that involves planning, installing, configuring, testing, managing, and maintaining firewalls in a network or system. Managing and maintaining is the phase of firewall implementation and deployment that involves monitoring and reviewing the performance and effectiveness of firewalls over time. Managing and maintaining can include tasks such as updating firewall rules or policies, analyzing firewall logs, detecting evolving threats or attacks, ensuring firewall security, addressing network issues, etc. In the scenario, Elliott was tasked with implementing and deploying firewalls in the corporate network of an organization. After planning and deploying firewalls in the network, Elliott monitored the firewall logs to detect evolving threats and attacks; this helped in ensuring firewall security and addressing network issues beforehand. This means that he performed managing and maintaining phase for this purpose. Deploying is the phase of firewall implementation and deployment that involves installing and activating firewalls in the network or system according to the plan. Testing is the phase of firewall implementation and deployment that involves verifying and validating the functionality and security of firewalls before putting them into operation. Configuring is the phase of firewall implementation and deployment that involves setting up and customizing firewalls according to the requirements and specifications.

## 28. Frage

.....

Wir können mit Stolz sagen, dass wir DeutschPrüfung professionell ist! Denn die Bestehensquote der Prüflingen, die unsere ECCouncil 212-82 Software benutzt haben, ist unglaublich hoch. Denn unsere Tech-Gruppe ist unglaublich kompetent. Der Kundendienst ist ein sehr wichtiger Standard für eine Firma. Um den hohen Standard zu entsprechen, bieten wir 24/7 online Kundendienst, einjähriger kostenloser ECCouncil 212-82 Aktualisierungsdienst nach dem Kauf und die Erstattungspolitik beim Durchfall. Wenn Sie wirklich ECCouncil 212-82 bestehen möchten, wählen Sie unsere Produkte!
