Topic 6	• 802.1X Authentication
Topic 7	• This section of the exam measures the skills of a Network Security Engineer and covers the configuration of FortiAuthenticator for wired and wireless 802.1X authentication using supported EAP methods.
Topic 8	• Administering and Authenticating Users: This section of the exam measures the skills of a Security Administrator and covers the processes for creating, managing, and authenticating user accounts within the FortiAuthenticator system.

Fortinet FCP—FortiAuthenticator 6.5 Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75

Refer to the exhibit.

Portal policy

Policy type Portal selection criteria Authorized clients Authentication type

Specify a condition on the parameters of the HTTP request that must be met to access this portal.
For example, a condition to restrict the portal to users from subnet 192.168.1.0/24 would be:
HTTP parameter = userip
Operator = [ip]in_range
Value = 192.168.1.0/24

Portal Rule Conditions

Portal Rule Condition:

☐ Not

HTTP parameter: userip

Operator: [ip]in_range

Value: 10.0.1.0/24

Portal Rule Condition:

☒ Not

HTTP parameter: ssid

Operator: [string]exact_match

Value: Guest

+ Add Portal Rule Condition

Previous Discard and exit Next

An administrator has a captive portal configuration on their FortiGate that directs users to a portal page on FortiAuthenticator. A user whose laptop has an IP address of 10.0.1.85 and is connected through the Guest SSID, is failing to load the portal page. What is the most likely cause of the problem?

- A. The host is connected to a prohibited SSID.
- B. The portal page will only be presented to wired hosts.

- C. The IP address is incorrect for the SSID.
- D. The host IP address is not in the required range.

Answer: A

Explanation:

The second portal rule condition explicitly uses Not with the SSID value "Guest", which means that users connected through the Guest SSID are excluded from accessing the portal, causing the failure for this user.

NEW QUESTION # 76

You are the administrator of a large network that includes a large local user datadatabase on the current Fortiauthentication. You want to import all the local users into a new Fortiauthenticator device.

Which method should you use to migrate the local users?

- A. Import users from RADUIS.
- **B. Import users using a CSV file.**
- C. Import users using RADIUS accounting updates.
- D. Import the current directory structure.

Answer: B

NEW QUESTION # 77

Which FortiAuthenticator feature allows users to authenticate against different back-end databases when using a single RADIUS policy?

- A. LDAP services
- B. User Groups
- **C. Realms**
- D. RADIUS attributes

Answer: C

Explanation:

Realms in FortiAuthenticator allow mapping of authentication requests to different back-end databases within a single RADIUS policy, enabling user authentication across multiple directories or identity sources.

NEW QUESTION # 78

What does SAML stand for in the context of SAML SSO service?

- A. Secure Access Markup Language
- B. Single Authentication Management Logic
- **C. Security Assertion Markup Language**
- D. System Authorization and Management Layer

Answer: C

NEW QUESTION # 79

Refer to the exhibits.

Event Log

	User	First Name	Last Name	Email Address	Admin	Status	Token	Token Requested	Groups
☐	admin								
☐	admin2			admin2@training.lab					
☐	student	Student	User	student@training.lab					

Event Detail

Level	information
Action	
Status	
Source IP	192.168.10.10
Message	User authentication (mschap) with no token failed: user not found
User	student
Log Type	
Type Id	20320
Name	Authentication Failed User Not Found
Sub Category	Authentication
Category	Event
Description	Authentication failed, user not found

An administrator has configured several wireless APs to use FortiAuthenticator as their RADIUS server. One user is unable to successfully authenticate. The user record exists in the system, but the FortiAuthenticator log shows Authentication failed, user not found.

What is the most likely cause of the problem?

- A. The RADIUS traffic is being sourced from an IP address not listed as NAS.
- B. No client entry exists for the authenticating AP.
- C. The RADIUS secret is incorrect.
- D. RADIUS authentication is not enabled for the user.

Answer: D

Explanation:

The log message indicates that FortiAuthenticator cannot find the user during RADIUS authentication, even though the user exists in the system. This typically happens when RADIUS authentication is not enabled for that user account, preventing FortiAuthenticator from using it for RADIUS login requests.

NEW QUESTION # 80

.....

Do not postpone seeking help from our extraordinary Fortinet FCP_FAC_AD-6.5 dumps to get the crucial Fortinet FCP_FAC_AD-6.5 certification exams. This platform allows you to self-assess your progress with a performance score. You can also customize your Fortinet FCP_FAC_AD-6.5 mock tests according to the time and kinds of practice queries.
