An administrator has configured several wireless APs to use FortiAuthenticator as their RADIUS server. One user is unable to successfully authenticate. The user record exists in the system, but the FortiAuthenticator log shows Authentication failed, user not found.

What is the most likely cause of the problem?

- A. RADIUS authentication is not enabled for the user.
- B. No client entry exists for the authenticating AP.
- C. The RADIUS traffic is being sourced from an IP address not listed as NAS.
- D. The RADIUS secret is incorrect.

Answer: A

Explanation:

The log message indicates that FortiAuthenticator cannot find the user during RADIUS authentication, even though the user exists in the system. This typically happens when RADIUS authentication is not enabled for that user account, preventing FortiAuthenticator from using it for RADIUS login requests.
