NEW QUESTION # 146

Which statement correctly describes RAID 10 (1+0) on FortiAnalyzer?

- A. A configuration with four disks, each with 2 TB of capacity, provides a total space of 4 TB.
B It combines mirroring striping and distributed parity to provide performance and fault tolerance
- B. A configuration with four disks, each with 2 TB of capacity, provides a total space of 2 TB.
- C. It uses striping to provide performance and fault tolerance.

Answer: A

Explanation:

RAID 10 combines mirroring (RAID 1) and striping (RAID 0). In a RAID 10 setup with four disks, data is mirrored across two pairs of disks, and those pairs are striped for performance. This results in improved performance and fault tolerance, but the total usable storage is 50% of the total raw storage, meaning four 2 TB disks provide 4 TB of usable space.
