Fortinet FCP—FortiClient EMS 7.2 Administrator Sample Questions (Q32-

Q37):

NEW QUESTION # 32
Which component or device shares ZTNA tag information through Security Fabric integration?

- A. FortiClient
- B. FortiGate Access Proxy
- C. FortiGate

Answer: C

Explanation:
FortiClient EMS is the component that shares ZTNA tag information through Security Fabric integration.
ZTNA tags are synchronized from FortiClient EMS as inputs for the FortiGate application gateway. They can be used in ZTNA policies as security posturechecks to ensure certain security criteria are met. FortiClient EMS can share ZTNA tags across multiple devices in the Fabric, such as FortiGate, FortiManager, and FortiAnalyzer. FortiClient EMS can also share ZTNA tags across multiple VDOMs on the same FortiGate device. FortiClient EMS can be configured to control the ZTNA tag sharing behavior in the Fabric Devices settings1.
FortiGate is the device that enforces ZTNA policies using ZTNA tags. FortiGate can receive ZTNA tags from FortiClient EMS via Fabric Connector. FortiGate can also publish ZTNA services through the ZTNA portal, which allows users to access applications without installing FortiClient. FortiGate can also provide ZTNA inline CASB for SaaS application access control2.
FortiGate Access Proxy is a feature that enables FortiGate to act as a proxy for ZTNA traffic. FortiGate Access Proxy can be deployed in front of the application servers to provide ZTNA protection. FortiGate Access Proxy can also be deployed behind the application servers to provide ZTNA visibility. FortiGate Access Proxy can use ZTNA tags to identify and authenticate users and devices2.
FortiClient is the endpoint software that connects to ZTNA services. FortiClient can register ZTNA tags with FortiClient EMS based on the endpoint security posture. FortiClient can also use ZTNA tags to access ZTNA services published by FortiGate. FortiClient can also use ZTNA tags to access SaaS applications with ZTNA inline CASB2.

NEW QUESTION # 33
Which security fabric component sends a notification io quarantine an endpoint after IOC detection "n the automation process?

- A. FortiAnalyzer
- B. FortiClient
- C. FortiGate
- D. FortiClient EMS

Answer: D

Explanation:
* Understanding the Automation Process:
* In the Security Fabric, automation processes can include actions such as quarantining an endpoint
* after an IOC (Indicator of Compromise) detection.
* Evaluating Responsibilities:
* FortiClient EMS plays a crucial role in endpoint management and can send notifications to quarantine endpoints.
* Conclusion:
* The correct security fabric component that sends a notification to quarantine an endpoint after IOC detection is FortiClient EMS.

NEW QUESTION # 34
Which three types of antivirus scans are available on FortiClient? (Choose three)

- A. Quick scan

- B. Full scan
- C. Custom scan
- D. Flow scan
- E. Proxy scan

Answer: A,B,C

Explanation:
FortiClient offers several types of antivirus scans to ensure comprehensive protection:
* Full scan:Scans the entire system for malware, including all files and directories.
* Custom scan:Allows the user to specify particular files, directories, or drives to be scanned.
* Quick scan:Scans the most commonly infected areas of the system, providing a faster scanning option.
These three types of scans provide flexibility and thoroughness in detecting and managing malware threats.

NEW QUESTION # 35
An administrator wants to simplify remote access without asking users to provide user credentials Which access control method provides this solution?

- A. SSL VPN
- B. ZTNA full mode
- C. ZTNA IP/MAC littering mode
- D. L2TP

Answer: B

Explanation:
Simplifying Remote Access:
The administrator wants to simplify remote access without asking users to provide user credentials.
Evaluating Access Control Methods:
ZTNA full mode can provide seamless access by leveraging device identity and posture, eliminating the need for user credentials for each access request.
Other methods like SSL VPN and L2TP typically require user credentials.
Conclusion:
The correct access control method that provides this solution is ZTNA full mode.

NEW QUESTION # 36
Refer to the exhibit.

Based on The settings shown in The exhibit, which statement about FortiClient behaviour is Hue?

- A. FortiClient quarantines infected ties and reviews later, after scanning them.
- B. FortiClient copies infected files to the Resources folder without scanning them.
- C. FortiClient scans infected files when the user copies files to the Resources folder.
- D. FortiClient blocks and deletes infected files after scanning them.

Answer: C

Explanation:
Based on the settings shown in the exhibit, FortiClient is configured to scan files as they are downloaded or copied to the system. This means that if a user copies files to the "Resources" folder, which is not listed under exclusions, FortiClient will scan these files for infections. The exclusion path mentioned in the settings, "C:\Users\Administrator\Desktop\Resources", indicates that any files copied to this specific folder will not be scanned, but since the question implies that the "Resources" folder is not the same as the excluded path, FortiClient will indeed scan the files for infections.
