

FCP_FGT_AD-7.4 Exam Questions and Answers Are of High Quality - Dumpexams

BONUS!!! Download part of Dumpexams FCP_FGT_AD-7.4 dumps for free: https://drive.google.com/open?id=12fqYOB6bxje4mLHZbmnp-9-64A26_wp

Only the help from the most eligible team can be useful and that are three reasons that our FCP - FortiGate 7.4 Administrator prepare torrent outreach others. Esoteric content will look so easily under the explanation of our experts. They will help you eschew the useless part and focus on the essence which exam will test. So they are conversant with the FCP - FortiGate 7.4 Administrator prepare torrent. Our FCP_FGT_AD-7.4 Exam Torrent was appraised as the top one in the market. They will mitigate your chance of losing. Challenge is ubiquitous, only by constant and ceaseless effort, can you be the man you want to be. If you persist in the decision of choosing our FCP_FGT_AD-7.4 test braindumps, your chance of success will increase dramatically.

Our FCP_FGT_AD-7.4 exam questions almost guarantee that you pass the exam. Even if you don't pass, you don't have to pay any price for our FCP_FGT_AD-7.4 simulating exam for we have money back guarantee to all of our exam materials. I hope we have enough sincerity to impress you. And our pass rate of the FCP_FGT_AD-7.4 training engine is high as 98% to 100%, it is the data that proved and tested by our loyal customers. As long as you study with our FCP_FGT_AD-7.4 learning guide, you will pass the exam easily.

Perfect New FCP_FGT_AD-7.4 Test Simulator Provide Prefect Assistance in FCP_FGT_AD-7.4 Preparation

FCP_FGT_AD-7.4 practice test can be your optimum selection and useful tool to deal with the urgent challenge. With over a decade's striving, our FCP_FGT_AD-7.4 training materials have become the most widely-lauded and much-anticipated products in industry. We have three versions of FCP_FGT_AD-7.4 Exam Questions by modernizing innovation mechanisms and fostering a strong pool of professionals. Therefore, rest assured of full technical support from our professional elites in planning and designing FCP_FGT_AD-7.4 practice test.

Fortinet FCP_FGT_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	Deployment and System Configuration: This section covers how to set up initial configurations, implement Fortinet Security Fabric, and configure an FGCP HA cluster; diagnose resources and connectivity.
Topic 2	- Firewall Policies and Authentication: This topic covers how to set firewall policies, configure SNAT - DNAT, implement authentication methods, and deploy FSSO.
Topic 3	VPN: In this section, the focus is on how to configure SSL VPNs for secure network access and implement meshed or redundant IPsec VPNs.

Topic 4	• Routing: This section covers how to set up packet routing with static routes and configure SD-WAN for efficient traffic load balancing.
Topic 5	• Content Inspection: This section covers how to inspect encrypted traffic, configure inspection modes, apply web filtering, manage applications, set antivirus modes, and implement IPS for security.

Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which three pieces of information does FortiGate use to identify the hostname of the SSL server when SSL certificate inspection is enabled? (Choose three.)

- A. The host field in the HTTP header
- B. The subject field in the server certificate
- C. The serial number in the server certificate
- D. The server name indication (SNI) extension in the client hello message
- E. The subject alternative name (SAN) field in the server certificate

Answer: B,D,E

Explanation:

When SSL certificate inspection is enabled, FortiGate uses the following three pieces of information to identify the hostname of the SSL server:

A. The subject field in the server certificate

The subject field typically contains the common name (CN) that represents the hostname.

C. The server name indication (SNI) extension in the client hello message SNI is an extension to the TLS protocol that indicates the hostname to which the client is attempting to connect.

D. The subject alternative name (SAN) field in the server certificate

The SAN field can include additional hostnames (alternative names) that are valid for the certificate.

So, the correct choices are A, C, and D.

Fortigate firstly uses SNI, if there is no SNI it uses Subject or Subject Alternatives.

During the exchange of hello messages at the beginning of an SSL handshake, FortiGate parses server name indication (SNI) from client Hello, which is an extension of the TLS protocol. The SNI tells FortiGate the hostname of the SSL server, which is validated against the DNS name before receipt of the server certificate. If there is no SNI exchanged, then FortiGate identifies the server by the value in the Subject field or SAN (subject alternative name) field in the server certificate.

NEW QUESTION # 50

Which two statements are true about the RPF check? (Choose two.)

- A. The RPF check is run on the first sent packet of any new session.
- B. RPF is a mechanism that protects FortiGuard and your network from IP spoofing attacks.
- C. The RPF check is run on the first sent and reply packet of any new session.
- D. The RPF check is run on the first reply packet of any new session.

Answer: A,B

Explanation:

RPF protect against IP spoofin attacks. The source IP address is checked against the routing table for a return path. RPF is only carried out on: The first packet in the session, not on reply.

NEW QUESTION # 51

Which CLI command allows administrators to troubleshoot Layer 2 issues, such as an IP address conflict?

- A. get system arp
- B. diagnose sys top
- C. get system performance status
- D. get system status

Answer: A

Explanation:

D. get system arp

The get system arp command allows administrators to view the ARP (Address Resolution Protocol) table on the FortiGate unit. This table maps IP addresses to MAC addresses and can be used to troubleshoot Layer 2 issues, such as an IP address conflict, by checking for duplicate IP addresses or incorrect MAC address mappings.

If you suspect that there is an IP address conflict, or that an IP has been assigned to the wrong device, you may need to look at the ARP table. The get system arp command is used for that purpose.

NEW QUESTION # 52

Which of the following statements is true regarding SSL VPN settings for an SSL VPN portal?

- A. By default, FortiGate uses WINS servers to resolve names.
- B. By default, the admin GUI and SSL VPN portal use the same HTTPS port.
- C. By default, the SSL VPN portal requires the installation of a client's certificate.
- **D. By default, split tunneling is enabled.**

Answer: D

Explanation:

There is a Trap here... C and D have something right but the trick is the question...

Under SSL VPN settings you can see that port is 443 (same of https admin port) BUT the question is about a SSL VPN Setting FOR A VPN PORTAL... so if you go to SSL VPN Portals and hit "Create new" you will see Tunnel Mode and Split Tunnel enabled by default... so, the correct answer is C.

Split tunneling is a feature that allows a remote VPN user to tunnel only specific, protected traffic back to the corporate network, while other traffic (e.g., internet traffic) is sent directly to its destination. This can help optimize bandwidth usage and reduce the load on the corporate network.

In the context of SSL VPN settings for an SSL VPN portal on FortiGate, if split tunneling is enabled by default, it means that the remote user's internet-bound traffic will not be forced through the corporate network but will be sent directly to the internet. This can improve performance and reduce latency for non-corporate internet traffic.

Extra explanation:

https://help.fortinet.com/fos50hlp/56/Content/FortiOS/fortigate-sslvpn/SSLVPN_Examples/Split_Tunnel.htm#:~:text=Split%20Tunnel,SSL%20VPN%20on%20FortiGate%20units.

NEW QUESTION # 53

Which statement is a characteristic of automation stitches?

- A. They can be run only on devices in the Security Fabric.
- **B. They can have one or more triggers.**
- C. They can run multiple actions at the same time.
- D. They can be created only on downstream devices in the fabric.

Answer: B

Explanation:

Automation stitches on FortiGate can have one or more triggers, which are conditions or events that activate the automation stitch. The trigger defines when the automation stitch should execute the defined actions. Actions within a stitch can be executed sequentially or in parallel, depending on the configuration.
