### Quiz 2025 Fortinet Accurate FCP\_FGT\_AD-7.4: FCP - FortiGate 7.4 Administrator Exam Reference

With the help of our FCP\_FGT\_AD-7.4 Latest Dumps Pdf, you just need to spend one or two days to practice the FCP\_FGT\_AD-7.4 training materials. If you remember the key points of study guide, you will pass the real exam with hit-rate. You can trust us about the valid and accuracy of Fortinet braindumps because it created by our experienced workers and based on the real questions.

### Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q70-Q75):

NEW QUESTION # 70

If the Services field is configured in a Virtual IP (VIP), which of the following statements is true when central NAT is used?

- A. The Services field is used when several VIPs need to be bundled into VIP groups.
- **B. The Services field removes the requirement of creating multiple VIPs for different services.**
- C. The Services field does not allow multiple sources of traffic, to use multiple services, to connect to a single computer.
- D. The Services field does not allow source NAT and destination NAT to be combined in the same policy.

**Answer: B**

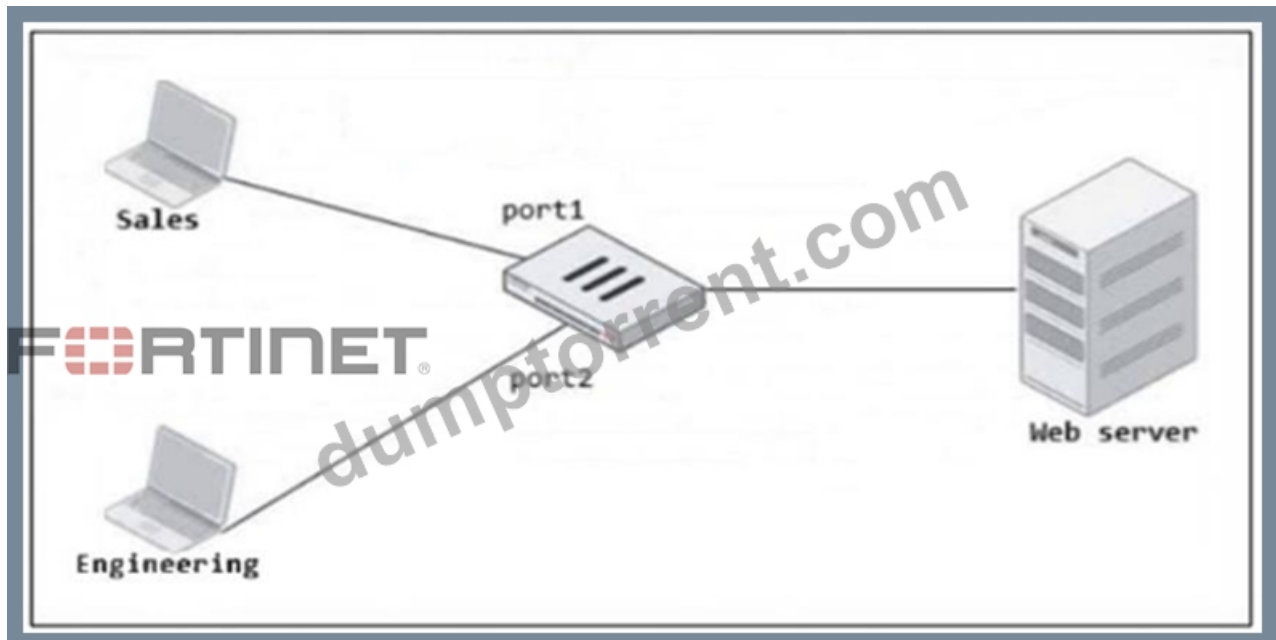

Explanation:

The Services option has been added to VIP objects. When services and port forward are configured, only a single mapped port can be configured. However, multiple external ports can be mapped to that single internal port. This configuration was made possible to allow for complex scenarios where multiple sources of traffic are using multiple services to connect to a single computer, while requiring a combination of source and destination NAT, and not requiring numerous VIPs to be bundled into VIP groups. VIPs with different services are considered non-overlapping.

When the Services field is configured in a Virtual IP (VIP), it allows you to specify multiple services or ports for the same VIP. This eliminates the need to create separate VIPs for different services, as you can define multiple services within a single VIP using the Services field. This is particularly useful for simplifying configuration and management.

### NEW QUESTION # 71

Refer to the exhibit.

FortiGate has two separate firewall policies for Sales and Engineering to access the same web server with the same security profiles. Which action must the administrator perform to consolidate the two policies into one?

- A. Enable Multiple Interface Policies to select port1 and port2 in the same firewall policy
- B. Replace port1 and port2 with the any interface in a single firewall policy.
- C. Select port1 and port2 subnets in a single firewall policy.
- **D. Create an Interface Group that includes port1 and port2 to create a single firewall policy**

**Answer: D**

Explanation:

To consolidate the two separate firewall policies for Sales and Engineering departments accessing the same web server, you can create an Interface Group that includes both port1 (Sales) and port2 (Engineering). Once the Interface Group is created, you can use this group as a single incoming interface in a single firewall policy. This approach reduces the number of policies, making management more efficient.

### NEW QUESTION # 72

An administrator must enable a DHCP server on one of the directly connected networks on FortiGate. However, the administrator is unable to complete the process on the GUI to enable the service on the interface. In this scenario, what prevents the administrator from enabling DHCP service?

- A. The role of the interface prevents setting a DHCP server.
- B. The FortiGate model does not support the DHCP server.
- C. Another interface is configured as the only DHCP server on FortiGate.
- D. The DHCP server settings are available only on the CLI.

**Answer: A**

### NEW QUESTION # 73

Which statement about the deployment of the Security Fabric in a multi-VDOM environment is true?

- A. Security rating reports can be run individually for each configured VDOM
- B. VDOMs without ports with connected devices are not displayed in the topology
- C. Downstream devices can connect to the upstream device from any of their VDOMs
- D. Each VDOM in the environment can be part of a different Security Fabric

**Answer: D**

Explanation:

In a multi-VDOM environment, each VDOM can be treated as an independent virtual firewall, and each VDOM can belong to a separate Security Fabric. This allows administrators to configure and manage separate Security Fabrics for different VDOMs, providing flexibility in managing security policies and fabric connections across virtual domains.

### NEW QUESTION # 74

How do you format the FortiGate flash disk?

- A. Load the hardware test (HQIP) image.
- B. Execute the CLI command `execute formatlogdisk`.
- C. Load a debug FortiOS image.
- D. Select the format boot device option from the BIOS menu.

**Answer: D**

Explanation:

Select the format boot device option from the BIOS menu.

Selecting the format boot device option from the BIOS menu allows you to format the FortiGate flash disk. This option is typically used when you need to reformat the flash disk to resolve issues or prepare it for a fresh installation of the operating system. However, it's important to note that formatting the flash disk will erase all data on it, so it should be done carefully.
