BONUS!!! Download part of CramPDF FCP_FGT_AD-7.4 dumps for free: <https://drive.google.com/open?id=1DQJiIL8ARi5iROJ8gX82UP9RCt4LYy6V>

Our passing rate of FCP_FGT_AD-7.4 exam guide is 98%-100% and our FCP_FGT_AD-7.4 test prep can guarantee that you can pass the exam easily and successfully. Our FCP_FGT_AD-7.4 exam materials are highly efficient and useful and can help you pass the exam in a short time and save your time and energy. It is worthy for you to buy our FCP_FGT_AD-7.4 Quiz torrent and you can trust our product. You needn't worry about anything as long as you have our FCP_FGT_AD-7.4 training material. We guarantee to you our FCP_FGT_AD-7.4 exam materials can help you and you will have an extremely high possibility to pass the exam.

We strongly recommend the FCP_FGT_AD-7.4 exam questions compiled by our company. On one hand, our FCP_FGT_AD-7.4 test material owns the best quality. When it comes to the FCP_FGT_AD-7.4 study materials selling in the market, qualities are patchy. But our FCP_FGT_AD-7.4 test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our FCP_FGT_AD-7.4 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

Updated FCP_FGT_AD-7.4 Valid Exam Cram offer you accurate New Study Questions | Fortinet FCP - FortiGate 7.4 Administrator

We promise to provide a high-quality simulation system with advanced FCP_FGT_AD-7.4 study materials. With the simulation function, our FCP_FGT_AD-7.4 training guide is easier to understand and have more vivid explanations to help you learn more knowledge. You can set time to test your study efficiency, so that you can accomplish your test within the given time when you are in the Real FCP_FGT_AD-7.4 Exam. You will be confident if you have more experience on the FCP_FGT_AD-7.4 exam questions!

Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q24-Q29):

NEW QUESTION # 24

What is the primary FortiGate election process when the HA override setting is disabled?

- A. Connected monitored ports > Priority > HA uptime > FortiGate serial number
- **B. Connected monitored ports > Priority > System uptime > FortiGate serial number**
- C. Connected monitored ports > System uptime > Priority > FortiGate serial number
- D. Connected monitored ports > HA uptime > Priority > FortiGate serial number

Answer: B

Explanation:

When the HA override setting is disabled, FortiGate uses the primary election process based on the following criteria:

* Connected monitored ports: The unit with the most monitored ports up is preferred.

* Priority: The unit with the highest priority is preferred.

* System uptime: The unit with the longest uptime is preferred.

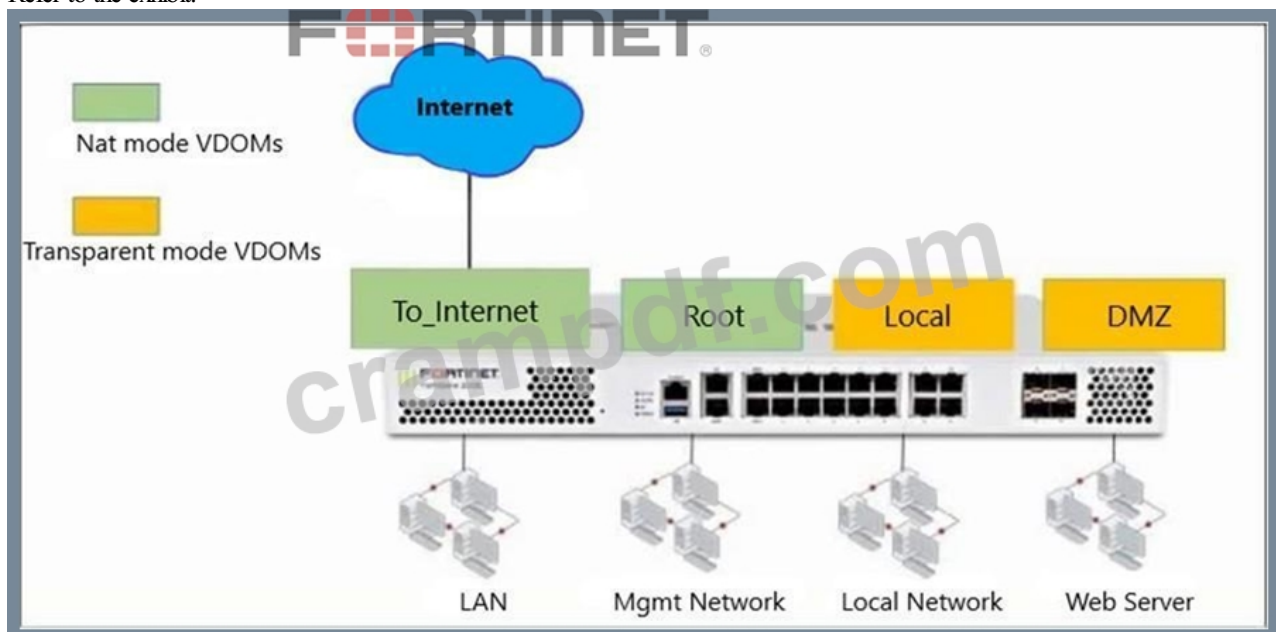

* FortiGate serial number: Used as the final criterion to break any remaining ties.

References:

* FortiOS 7.4.1 Administration Guide: HA election process

NEW QUESTION # 25

Refer to the exhibit.

The Root and To_Internet VDOMs are configured in NAT mode. The DMZ and Local VDOMs are configured in transparent mode.

The Root VDOM is the management VDOM. The To_Internet VDOM allows LAN users to access the internet. The To_Internet VDOM is the only VDOM with internet access and is directly connected to ISP modem.

With this configuration, which statement is true?

- A. A default static route is not required on the To_Internet VDOM to allow LAN users to access the internet.
- B. Inter-VDOM links are not required between the Root and To_Internet VDOMs because the Root VDOM is used only as a management VDOM.
- C. Inter-VDOM links are required to allow traffic between the Local and Root VDOMs.
- D. Inter-VDOM links are required to allow traffic between the Local and DMZ VDOMs.

Answer: C

Explanation:

A. Inter-VDOM links are required to allow traffic between the Local and Root VDOMs.

Incorrect:

B. A default static route is not required on the To_Internet VDOM to allow LAN users to access the internet.

C. Inter-VDOM links are required to allow traffic between the Local and DMZ VDOMs. (transparent- transparent)

D. Inter-VDOM links are not required between the Root and To_Internet VDOMs because the Root VDOM is used only as a management VDOM.

Each VDOM has independent security policies and routing tables. Also, and by default, traffic from one VDOM cannot go to a different VDOM.

You cannot create an inter-VDOM link between Layer 2 transparent mode VDOMs. At least one of the VDOMs must be operating in NAT mode.

Similar to FortiGate without VDOMs enabled, the management VDOM should have outgoing internet access. Otherwise, features such as scheduled FortiGuard updates, fail.

NEW QUESTION # 26

Which statement is correct regarding the inspection of some of the services available by web applications embedded in third-party websites?

- A. The application signature database inspects traffic only from the original web application server.
- B. The security actions applied on the web applications will also be explicitly applied on the third-party websites.
- C. FortiGuard maintains only one signature of each web application that is unique.
- D. FortiGate can inspect sub-application traffic regardless where it was originated.

Answer: D

Explanation:

D. FortiGate can inspect sub-application traffic regardless of where it originated.

FortiGate is capable of inspecting traffic from web applications embedded in third-party websites, regardless of where the traffic originated. This allows FortiGate to provide comprehensive security measures for web applications, including those embedded in third-party websites. FortiOS gives administrators all the tools they need to inspect sub-application traffic.

NEW QUESTION # 27

Refer to the exhibit, which contains a session diagnostic output.

```
session info: proto=17 proto_state=01 duration=254 expire=179 timeout=0 flags=00000000 socktype=0 sockport=0 av_idx=0 use=3
origin-shaper=
reply-shaper=
per_ip_shaper=
class_id=0 ha_id=0 policy_dir=0 tunnel=/ helper=dns-udp vlan_cos=0/255
state=log may_dirty f00 log-start
statistic(bytes/packets/allow_err): org=1420/22/1 reply=5678/22/1 tuples=2
tx speed(Bps/kbps): 5/0 rx speed(Bps/kbps): 22/0
origin->sink: org pre->post, reply pre->post dev=5->3->5 gw=10.200.1.254/10.0.1.200
hook=post dir=org act=snat 10.0.1.200:2486->208.91.112.53:53(10.200.1.1:62902)
hook=pre dir=reply act=dnat 208.91.112.53:53->10.200.1.1:62902(10.0.1.200:2486)
misc=0 policy_id=3 auth_info=0 chk_client_info=0 vd=0
serial=0001fc1e tos=ff/ff app_list=0 app=0 url_cat=0
rpdn_link_id= 00000000 rpdn_svc_id=0 ngfwid=n/a
npu_state=0x040000
```

Which statement is true about the session diagnostic output?

- A. The session is a bidirectional TCP connection.
- B. The session is a UDP unidirectional state.
- C. The session is in TCP ESTABLISHED state.

- D. The session is a bidirectional UDP connection.

Answer: D

Explanation:

The session is a bidirectional UDP connection.

B: Protocol 17 means UDP and proto_state=1 is bidirectional (proto_state=0 is unidirectional) proto=17

-> UDP proto_state=01 -> UDP Reply seen

A is wrong

NEW QUESTION # 28

Refer to the exhibits, which show the firewall policy and the security profile for Facebook.

The screenshot displays the configuration for a Firewall Policy named 'Facebook SSL Inspection'. The configuration is as follows:

Field	Value
Name	Facebook SSL Inspection
Incoming Interface	port3
Outgoing Interface	port1
Source	all
Destination	all
Schedule	always
Service	ALL
Action	ACCEPT

Below the policy configuration, there is a section for 'Firewall/Network Options' which includes a note: 'Central NAT is enabled so NAT settings from matching Central SNAT policies will be applied.' and a 'Protocol Options' dropdown set to 'default'.

The 'Security Profiles' section is also visible, with the following settings:

Profile	Status	Configuration
AntiVirus	Off	
Web Filter	Off	
DNS Filter	Off	
Application Control	On	Facebook Access
IPS	Off	
File Filter	Off	
SSL Inspection	On	certificate-inspection

Users are given access to the Facebook web application. They can play video content hosted on Facebook but they are unable to leave reactions on videos or other types of posts.

Which part of the configuration must you change to resolve the issue?

- A. Add Facebook to the URL category in the security policy
- **B. Get the additional application signatures required to add to the security policy**
- C. Make the SSL inspection a deep content inspection
- D. Disable HTTP redirect to HTTPS on the web browser

Answer: B

Explanation:

In the security profile, there are application overrides for specific Facebook-related features, such as "Facebook" and "Facebook_Video.Play." However, the absence of specific signatures for actions like "Facebook_Like.Button" might be preventing reactions. You need to ensure that the necessary application signatures for all desired Facebook features, including reactions (like buttons), are included in the security policy. Therefore, retrieving or adding those signatures would resolve the issue.

NEW QUESTION # 29

.....

Our Fortinet Exam Questions greatly help FCP - FortiGate 7.4 Administrator (FCP_FGT_AD-7.4) exam candidates in their preparation. Our FCP - FortiGate 7.4 Administrator (FCP_FGT_AD-7.4) practice questions are designed and verified by prominent and qualified FCP - FortiGate 7.4 Administrator (FCP_FGT_AD-7.4) exam dumps preparation experts. The qualified FCP - FortiGate 7.4 Administrator (FCP_FGT_AD-7.4) exam questions preparation experts strive hard and put all their expertise to ensure the top standard and relevancy of FCP_FGT_AD-7.4 exam dumps topics.
