Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q70-Q75):

NEW QUESTION # 70

Which inspection mode does FortiGate use for application profiles if it is configured as a profile-based next-generation firewall (NGFW)?

- A. Certificate inspection
- B. Full content inspection
- C. Proxy-based inspection
- D. Flow-based inspection

Answer: D

Explanation:

When FortiGate is configured in NGFW profile-based mode, it primarily uses flow-based inspection for application profiles. Flow-based inspection provides faster processing and lower latency by inspecting traffic in real-time without buffering, making it suitable for scenarios where performance is a priority.

NEW QUESTION # 71

Which statement about firewall policy NAT is true?

- A. DNAT is not supported.
- B. DNAT can automatically apply to multiple firewall policies, based on DNAT rules.
- C. SNAT can automatically apply to multiple firewall policies, based on SNAT rules.
- D. You must configure SNAT for each firewall policy.

Answer: D

Explanation:

C. You must configure SNAT for each firewall policy.

The correct statement about firewall policy Nat (Network Address Translation) is: You must configure SNAT for each firewall policy.

SNAT (Source Network Address Translation) and DNAT (Destination Network Address Translation) are important components of a firewall's policy.

NEW QUESTION # 72

Refer to the exhibit to view the firewall policy.

Why would the firewall policy not block a well-known virus, for example eicar?

- A. The firewall policy does not apply deep content inspection.
- B. Web filter is not enabled on the firewall policy to complement the antivirus profile.
- **C. The firewall policy is not configured in proxy-based inspection mode.**
- D. The action on the firewall policy is not set to deny.

Answer: C

Explanation:

The firewall policy shown in the exhibit is configured in flow-based inspection mode. In flow-based inspection, certain security features, such as deep content inspection, might not be as effective as in proxy-based mode. Proxy-based inspection is necessary for thorough content inspection, which includes identifying and blocking well-known viruses like EICAR.

NEW QUESTION # 73

Which three statements explain a flow-based antivirus profile? (Choose three.)

- **A. Flow-based inspection optimizes performance compared to proxy-based inspection**
- B. If a virus is detected, the last packet is delivered to the client.
- C. Flow-based inspection uses a hybrid of the scanning modes available in proxy-based inspection
- **D. The IPS engine handles the process as a standalone.**
- **E. FortiGate buffers the whole file but transmits to the client at the same time.**

Answer: A,D,E

Explanation:

Flow-based inspection optimizes performance compared to proxy-based inspection.

Flow-based inspection scans traffic in real-time as it passes through, resulting in better performance compared to proxy-based inspection, which buffers traffic.

FortiGate buffers the whole file but transmits to the client at the same time.

In flow-based inspection, the file is scanned while it is being transmitted, improving speed and reducing latency.

The IPS engine handles the process as a standalone.

In flow-based antivirus inspection, the IPS engine is used to inspect traffic, making it more efficient and integrated within the broader security mechanisms.

NEW QUESTION # 74

An administrator manages a FortiGate model that supports NTurbo.

How does NTurbo enhance performance for flow-based inspection?

- **A. NTurbo offloads traffic to the content processor.**
- B. NTurbo creates two inspection sessions on the FortiGate device.
- C. NTurbo creates a special data path to redirect traffic between the IPS engine its ingress and egress interfaces.
- D. NTurbo buffers the whole file and then sends it to the antivirus engine.

Answer: A
