

# FCP\_FGT\_AD-7.4 Valid Braindumps Book, Reliable

## FCP\_FGT\_AD-7.4 Mock Test

P.S. Free 2025 Fortinet FCP\_FGT\_AD-7.4 dumps are available on Google Drive shared by Prep4away:  
<https://drive.google.com/open?id=1f9G37jD65g6fgewE0xZsmBuaawt1jgD>

On the one hand, by the free trial services you can get close contact with our products, learn about the detailed information of our FCP\_FGT\_AD-7.4 study materials, and know how to choose the different versions before you buy our products. On the other hand, using free trial downloading before purchasing, I can promise that you will have a good command of the function of our FCP\_FGT\_AD-7.4 Exam prepare. According to free trial downloading, you will know which version is more suitable for you in advance and have a better user experience.

### Fortinet FCP\_FGT\_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Content Inspection: This section covers how to inspect encrypted traffic, configure inspection modes, apply web filtering, manage applications, set antivirus modes, and implement IPS for security.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>VPN: In this section, the focus is on how to configure SSL VPNs for secure network access and implement meshed or redundant IPsec VPNs.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Routing: This section covers how to set up packet routing with static routes and configure SD-WAN for efficient traffic load balancing.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Firewall Policies and Authentication: This topic covers how to set firewall policies, configure SNAT</li><li>DNAT, implement authentication methods, and deploy FSSO.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Deployment and System Configuration: This section covers how to set up initial configurations, implement Fortinet Security Fabric, and configure an FGCP HA cluster; diagnose resources and connectivity.</li></ul>

## Fortinet FCP\_FGT\_AD-7.4 Practice Test - Free Updated Demo (2025)

Everyone has a utopian dream in own heart. Dreams of imaginary make people feel disheartened. In fact, as long as you take the right approach, everything is possible. You can pass the Fortinet FCP\_FGT\_AD-7.4 Exam easily. Why? Because you have Prep4away's Fortinet FCP\_FGT\_AD-7.4 exam training materials. Prep4away's Fortinet FCP\_FGT\_AD-7.4 exam training materials are the best training materials for IT certification. It is famous for the most comprehensive and updated by the highest rate. It also can save time and effort. With it, you will pass the exam easily. If you pass the exam, you will have the self-confidence, with the confidence you will succeed.

### Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q62-Q67):

#### NEW QUESTION # 62

A network administrator wants to set up redundant IPsec VPN tunnels on FortiGate by using two IPsec VPN tunnels and static routes.

All traffic must be routed through the primary tunnel when both tunnels are up. The secondary tunnel must be used only if the primary tunnel goes down. In addition, FortiGate should be able to detect a dead tunnel to speed up tunnel failover.

Which two key configuration changes must the administrator make on FortiGate to meet the requirements?

(Choose two.)

- A. Configure a lower distance on the static route for the primary tunnel, and a higher distance on the static route for the secondary tunnel.
- B. Enable Dead Peer Detection
- C. Configure a higher distance on the static route for the primary tunnel, and a lower distance on the static route for the secondary tunnel.
- D. Enable Auto-negotiate and Autokey Keep Alive on the phase 2 configuration of both tunnels.

**Answer: A,B**

Explanation:

To configure redundant IPsec VPN tunnels on FortiGate with failover capability, the following two key configuration changes are required:

\* A. Enable Dead Peer Detection (DPD): Dead Peer Detection is crucial for detecting if the remote peer is unreachable. By enabling DPD, FortiGate can quickly detect a dead tunnel, ensuring a faster failover to the secondary tunnel when the primary tunnel goes down.

\* C. Configure a lower distance on the static route for the primary tunnel and a higher distance on the static route for the secondary tunnel: The static route with the lower distance (higher priority) will be used when both tunnels are operational. If the primary tunnel fails, the higher distance (lower priority) route for the secondary tunnel will take over, ensuring traffic is routed correctly.

The other options are not suitable:

\* B. Enable Auto-negotiate and Autokey Keep Alive on the phase 2 configuration of both tunnels:

This option is not directly related to the requirements of failover between two IPsec VPN tunnels.

\* D. Configure a higher distance on the static route for the primary tunnel and a lower distance on the static route for the secondary tunnel: This would prioritize the secondary tunnel over the primary tunnel, which is opposite to the desired configuration.

#### NEW QUESTION # 63

Refer to the exhibits.

## Exhibit A Exhibit B

## Exhibit A Exhibit B

Name	From	To	Source	Destination	Schedule	Service	Action	NAT
Full_Access	LAN (port3)	WAN (port1)	all	all	always	ALL	ACCEPT	IP Pool
WebServer	WAN (port1)	LAN (port3)	all	VIP	always	ALL	ACCEPT	Disabled

Edit Virtual IP		Edit Dynamic IP Pool	
VIP type	IPv4	Name	IP Pool
Name	VIP	Comments	Write a comment...
Comments	Write a comment...		0/255
Color	Change	Type	Overload One-to-One Fixed Port Range Port Block Allocation
Network		External IP address/range	10.200.1.100-10.200.1.100
Interface	port1	NAT64	Off
Type	Static NAT	ARP Reply	On
External IP address/range	10.200.1.10		
Map to			
IPv4 address/range	10.0.1.10		
Optional Filters			
Port Forwarding	On		
Protocol	TCP UDP SCTP ICMP		
Port Mapping Type	One to one Many to many		
External service port	443		
Map to IPv4 port	443		

The exhibits contain a network diagram, and virtual IP, IP pool, and firewall policies configuration information.

The WAN (port1) interface has the IP address 10.200.1.1/24.

The LAN (port3) interface has the IP address 10.0.1.254/24.

The first firewall policy has NAT enabled using IP pool.

The second firewall policy is configured with a VIP as the destination address.

Which IP address will be used to source NAT (SNAT) the internet traffic coming from a workstation with the IP address 10.0.1.10?

- A. 10.0.1.254
- B. 10.200.1.100
- C. 10.200.1.1
- D. 10.200.1.10

**Answer: B**

Explanation:

From LAN to WAN, the Source NAT will use the IPPool with address configured 10.200.1.100 Destination NAT, from WAN to LAN, will use the VIP. The question says SNAT, so the only correct answer here (looking at the IP Pool) is D.

(Step 2): FortiGate uses as NAT IP the external IP address defined in the VIP when performing SNAT on all egress traffic sourced from the mapped address in the VIP, provided the matching firewall policy has NAT enabled.

Note that you can override the behavior described in step 2 by using an IP pool.

#### NEW QUESTION # 64

Which security fabric feature causes an event trigger to monitor the network when a threat is detected?

- **A. Automation stitches**
- B. Fabric connectors
- C. Optimization
- D. Security rating

**Answer: A**

Explanation:

Automation stitches

In the context of the Fortinet Security Fabric, automation stitches are responsible for orchestrating responses to security events.

When a threat is detected, automation stitches can trigger events to monitor the network, coordinate responses, and ensure a synchronized defense across the entire security fabric. Therefore, option C is the correct answer.

Each automation stitch pairs an event trigger and one or more actions, it allows you to monitor your network and take appropriate action when SecFabric detects a threat.

#### NEW QUESTION # 65

An administrator needs to configure VPN user access for multiple sites using the same soft FortiToken.

Each site has a FortiGate VPN gateway.

What must an administrator do to achieve this objective?

- **A. The administrator must use a FortiAuthenticator device.**
- B. The administrator can use a third-party radius OTP server.
- C. The administrator can register the same FortiToken on more than one FortiGate.
- D. The administrator must use the user self-registration server.

**Answer: A**

Explanation:

B. The administrator must use a FortiAuthenticator device.

B is correct due to the FortiToken, a different OTP cannot use FortiToken. So we have to choose the FortiAuthenticator.

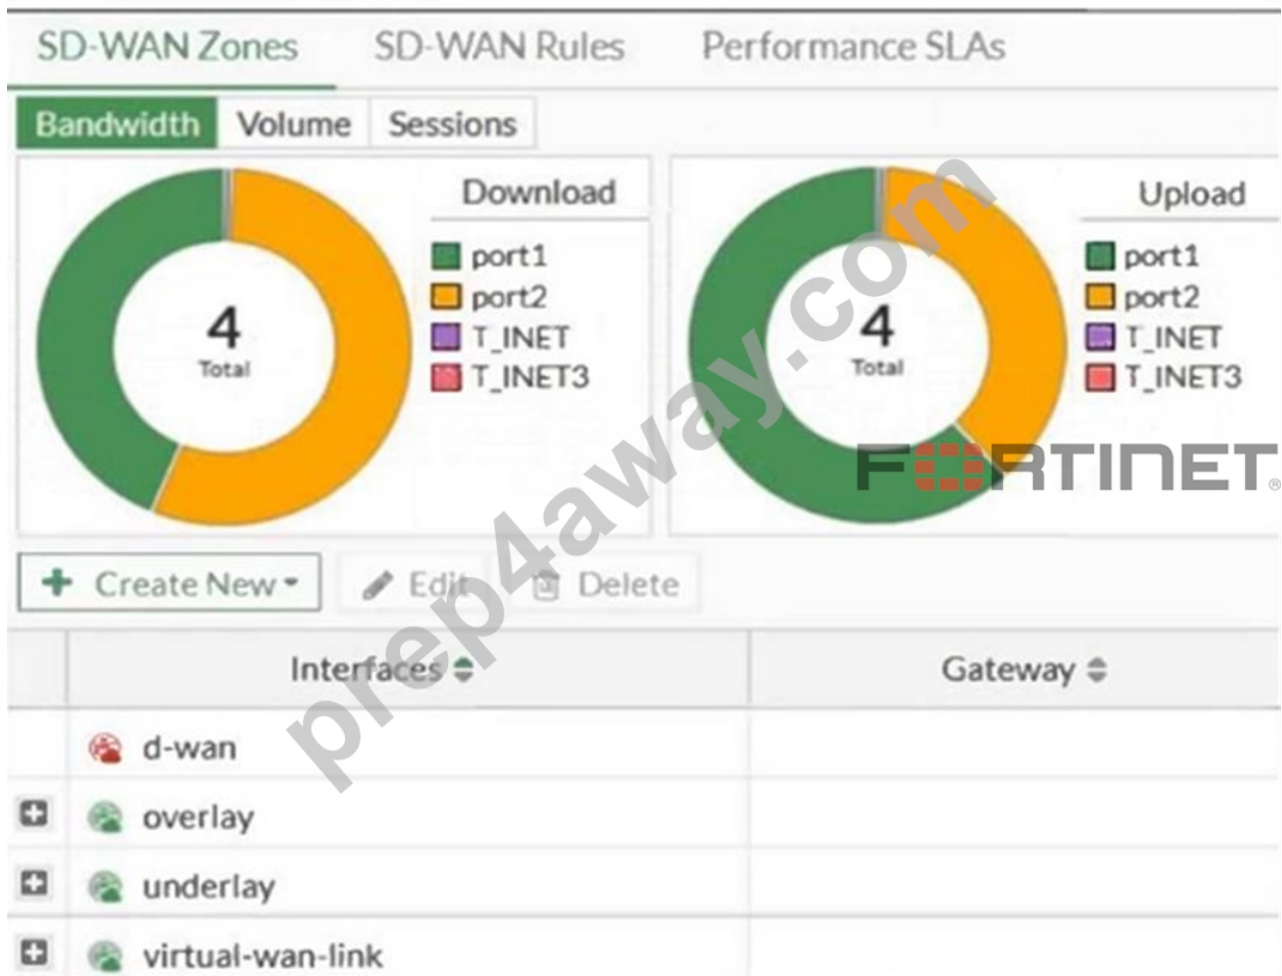

To achieve VPN user access for multiple sites using the same soft FortiToken, the administrator can use a FortiAuthenticator device.

FortiAuthenticator is designed to provide centralized authentication services for Fortinet devices, including VPN authentication. It allows for the centralized management of user identities, authentication methods, and FortiTokens. By using FortiAuthenticator, the administrator can register the same FortiToken for users across multiple FortiGate devices, providing a seamless and centralized user access experience.

#### NEW QUESTION # 66

Refer to the exhibit, which shows an SD-WAN zone configuration on the FortiGate GUI.

## FortiGate SD-WAN zone configuration

Based on the exhibit, which statement is true?

- A. The d-wan zone contains no member.
- B. The underlay zone contains port1 and
- C. The virtual-wan-link zone contains no member.
- D. The d-wan zone cannot be deleted.

**Answer: A**

Explanation:

The "d-wan" zone in FortiGate SD-WAN configuration is the default SD-WAN zone created when SD-WAN is enabled. This zone contains all the interfaces assigned to SD-WAN and is essential for the functionality of the SD-WAN feature. The "d-wan" zone cannot be deleted because it is required for SD-WAN operations.

Option A is incorrect because the underlay zone does not contain port1. Options B and D are incorrect because they incorrectly describe the configuration of zones.
