Over this long time period, thousands of FCP_FMG_AD-7.4 Exam candidates have passed their FCP - FortiManager 7.4 Administrator (FCP_FMG_AD-7.4) certification exam and now they are doing jobs in the world's top brands. You can also be a part of this wonderful community.

Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16
An administrator created a new ADOM named Training for FortiGate devices only, and added the root FortiGate device of a Security Fabric group to the Training ADOM.
Given the administrator's actions, which statement correctly describes the expected result for the downstream devices in the Security Fabric?

- A. The downstream devices are automatically authorized.
- B. The downstream devices must be added using the Add Device wizard.
- C. The downstream devices show as unauthorized in the Training ADOM.
- D. The downstream devices will appear in the root ADOM.

Answer: C

Explanation:
All downstream fortigate in the sec fabric group will be added in unauthorized devices group in the same ADOM as the root.

NEW QUESTION # 17
Exhibit.

An administrator would like to create three ADOMs on FortiManager with different access levels based on departments. What two conclusions can you draw from the design shown in the exhibit? (Choose two.)

- A. The FortiManager administrator must set the ADOM device mode to Advanced
- B. An administrator with the super user profile can access all the VDOMs.
- C. Policies and objects databases can be shared between the Financial and HR ADOMs.
- D. The administrator must configure FortiManager in workspace normal mode.

Answer: A,B

Explanation:
Based on the exhibit, the FortiManager administrator is setting up three ADOMs (Administrative Domains) that correspond to different departments (Financial, HR, and IT). Each ADOM has specific FortiGate devices or VDOMs (Virtual Domains) assigned to it, with different administrators managing the ADOMs.
Explanation of Options:
* A. The FortiManager administrator must set the ADOM device mode to Advanced.
* This is true. In FortiManager, when there are VDOMs (Virtual Domains) involved, you must set the ADOM to Advanced mode to manage VDOMs properly. The IT department ADOM includes different VDOMs from FortiGate 4 (VDOM 2 and VDOM 3),

which means the ADOM mode must be in Advanced to support managing VDOMs separately from other ADOMs.

* B. Policies and objects databases can be shared between the Financial and HR ADOMs.

* This is false. By default, ADOMs are separate, and policies and objects cannot be shared between them unless they are specifically designed to do so. The exhibit shows distinct ADOMs for each department, implying no direct sharing of policies and objects between Financial and HR ADOMs.

* C. An administrator with the super user profile can access all the VDOMs.

* This is true. A FortiManager administrator with the super user profile has full access to all ADOMs and VDOMs, regardless of how access is restricted for individual administrators. In this case, an admin with the super user profile could access Financial, HR, and IT ADOMs, including all the VDOMs from FortiGate 4.

* D. The administrator must configure FortiManager in workspace normal mode.

* This is false. There is no requirement mentioned in the exhibit or scenario that mandates using workspace normal mode. Workspace mode is more related to how configuration changes are managed (locking, editing, etc.), but it doesn't affect the creation or access control of ADOMs.

Conclusion:

* A is correct because Advanced mode is necessary for managing VDOMs within ADOMs.

* C is correct because a super user can access all VDOMs and ADOMs without restrictions.

NEW QUESTION # 18
Which two statements about the integrity of databases on FortiManager are correct? (Choose two.)

- A. Scheduled backups run database integrity commands automatically.
- B. The diagnose cdb check adom-integrity command can correct issues related to looked devices.
- C. Not following the correct upgrade path may cause inconsistencies in the databases.
- D. You should fix all database integrity issues before performing a backup.
- E. The diagnose dvm check-integrity command attempts to fix a corrupted file system.

Answer: A,C

NEW QUESTION # 19
What is a characteristic of the FortiManager high availability (HA) feature?

- A. Each cluster member must be upgraded manually, starting with the primary unit.
- B. The primary unit synchronizes all configuration revision with the seconday units.
- C. All secondary units must be in the same network as the primary unit.
- D. When a secondary unit is removed, FortiManager updates the managed devices using TCP port 5199.

Answer: B

NEW QUESTION # 20
Refer to the exhibit.

Add FortiAnalyzer - Discover Device (1/3)

Add New FortiAnalyzer   Add Existing FortiAnalyzer

Device will be probed using a provided IP address and credentials to determine model type and other important information.

💻 10.0.1.210

Use legacy device login   🔵

👤 admin

🔒 ••••••••

Add FortiAnalyzer - Discover Device (1/3)

✖ Probe failed: network

According to the error message, why is FortiManager failing to add the FortiAnalyzer device?

- A. The administrator must use the correct user name and password of the FortiAnalyzer device.
- B. The administrator must turn off the Use Legacy Device login and add the FortiAnalyzer device to the same network as FortiManager.
- C. The administrator must use the Add Model Device section and discover the FortiAnalyzer device.
- D. The administrator must select the FortiManager administrative access checkbox on the FortiAnalyzer management interface.

Answer: D

NEW QUESTION # 21
